PATTISON IN THE NORTH

PETER MARSHALL

The Son of a well known Head Greenkeeper, with five years of practical experience in the field, to coin a phase, Peter has a good idea what his customers are looking for from our new van sale and delivery service.

Working from Leeds, as his stock holding centre, he is able to offer immediate delivery from the wide range of our equipment carried by his van to Golf Clubs in Northumberland, Cumbria, Humberside and Merseyside. Golf Clubs in Yorkshire, Greater Manchester and Lancashire, share with Durham, Tyne and Wear and Cleveland the facility of Peter's service, his smiling face and reputation are fast becoming recognised as being worthy of our Company moto, Give them the best—they deserve it.

His personal interests include playing golf and bird watching.

Letters

Dear Members,

I would like to take this opportunity to thank everyone for their help at the International Tournament and Symposium.

A tremendous amount of work went into arranging the Symposium. However the overall success was mainly due to our members, for coming along and supporting, and bringing Club Members, Secretaries etc., to swell the numbers. Thanks also to the Trade for their support, without which, these functions would be impossible.

A special thanks to Ransomes Ltd. for arranging the International Tournament. This gave us all a wonderful chance to meet our visitors from other countries. I am sure that some lasting freindships were formed.

D. S. GOULD National Chairman

FIBRE

We have heard a lot talked about Fibre. This is my way of helping to reduce it and, at the same time you can improve your drainage, and get some air to the roots.

First, when you cut a new hole, remove the Turf cap. Keep the top layer of soil, and discard the lower layer. Remove the hole cup and first of all, put some Grit in the bottom of the hole. Cover this with the top section of the new hole, and fill to required depth with a decent Soil/ Sand misc. Leave just enough room for the Turf plug. Firm everything and water. If this is done every time you change the holes you will soon see an improvement.
