MANCHESTER ENTERPRISE.

MAY D. BLOSSER, Proprietor. Independent in all things. Devoted to State, County and Home News. TERMS, $2.00 A YEAR IN ADVANCE.

VOL. 8.—NO. 30. MANCHESTER, MICH., THURSDAY, APRIL 22, 1875. WHOLE NO. 394.

AGRICULTURAL ITEMS.

AN old Quaker whose bee hives had mysteriously lost their food used candy with entire success.

UPLAND cranberries grow very dark, and consequently bring one-third more in the market.

ELLER R. KINGSLEY, of Olathe, Kansas, has been invited to address the legislature of that State on the industrial education of women.

THERE is often a matter of importance to farmers, that is, the amount and appetizer for fattening animals, molasses has no equal.

NEW YORK has one-sixth of all the milch cows in the United States, and produces one-fourth of the butter, two-fifths of the cheese, and one-half of the milk sold in this country.

NOTHING should be grown or suffered to grow on a farm that can not be converted into money. Weeds and briers, therefore, should not be permitted to grow, as there is no money value in them.

A BINGHAMPTON farmer says it pays better to make both butter and cheese. He finds it best to keep his cheese late. The receipts and expenses of his farm showed a balance of $89.29 over seven per cent. on the amount invested, rating his 230 acres at $100 per acre.

THE Ayrshires have been celebrated for the production of cheese, and the Alderneys of butter. If the milk of the Alderneys is set for cream we find the cream readily separates, and the balance is poor and watery. The Ayrshire is capable of making more milk from a given quantity of feed than any other stock.

SOME of our best cultivators of fruit attach great importance to the stimulus the roots of fruit trees to run near the surface of the soil, and with the end in view they never cultivate or stir the soil surface, applying a top dressing of manure to make up the loss of fertility. They raise the excellent crops in this way.

IN the greenhouse of Mr. Mansfield at Newton, Massachusetts, a white cucumber rose, now over twenty years old, covering over one hundred square feet of roof, which has furnished twenty or thirty buds daily since December. It is estimated that there will be five private and 2,500 buds, which, at nine dollars a hundred, gives a profit of $225.

THE Ayrshire and Jersey breeders pay $200 per acre yearly rent for the land they cultivate, and their average profit amounts to $300 per acre. One English penny (equal to two of our cents) per square yard is equal to $100 an acre, and as there are nine and one-half acres in every square yard, these figures are not at all improbable.

THERE is a farm yield both wool and mutton. They multiply with great rapidity. They are the best of farm scavengers, cleaning a field from every other class of animals will. They give back to the farm more in proportion to what they take from it than any other animal, and distribute it better with a view to the future fertility of the farm.

A. M. PURDY, in his paper, says if strawberries, raspberries and blackberries sell in any city market within a hundred miles by railway at from ten to fifteen cents per quart you can make them pay. But if lower than ten cents, as are very low, let them alone. If you can peddle them in neighboring villages for ten or twelve cents you can go ahead.

THE following mixture of manure produced by feeding different kinds of food is taken from a table prepared by John Lawes of Rothamsted, and the calculation made by feeding one ton of peas, $13.38; one ton of decorticated cotton cake meal, $7.98; one ton of wheat bran, $15.59; one ton oats, $7.70; one ton cotton seed, $3.90; one ton linseed cake, $7.85; one ton clover hay, $9.64; one ton timothy hay, $6.48; one ton mangel wurzel, $1.67; one ton turnips, $1.67.

THE Japanese have wonderful skill in dwarfing fruit trees. All kinds are reared without increasing the size of the fruit. The trees are set out in regular rows. At the height they want the tree to grow, say four to six feet, a lattice work of small bamboo poles is built over the whole orchard. As soon as the shoots of the fruit trees grow to this lattice they are trained to run along it horizontally, and are fastened to the poles by bempen strings. When first seen it looks like a grapery. The wind can not shake the fruit to injurely either the flowers or the fruits.

MY daughter keeps my farm accounts, and she is as systematic and particular in her work as one, who keeps them before he left home. I tell you it does girls" (and he might have added boys also) "good to have the responsibility, and set them to watching things about the farm, and keeping at it. They learn, I find, economy by it, and soon discover their father is not necessarily a crabbed, cross-grained man, because he does not loosen his purse-string whenever they see something they happen to fancy, for they soon learn the reason why the purse should not be opened."

A Wedding Fee.

Many and many a year ago, how many deponent saith not, a youthful couple appeared at the gateway of a parsonage in a town not a hundred miles from R. Mounted on a sober nag, they almost claimed companionship with it, but, evidently filled with to them some valuable commodity.

Dismounting, the gallant youth left his lady and the nag, proceeded up the avenue of elms leading to the pastor's door, and entered the parsonage. Soon reappearing, he waived his hand to the waiting damsel, at the same time calling in stentorian tones:

"Come along—he says he will take the beast!"

Guiding the steed to the door, the lady was received by her would-be lord, and soon the train were made one flesh, and the minister was left in possession of a good supply of beans.

A DESERVED COMPLIMENT.—The Cincinnati *Gazette* of recent date says: "We take pleasure in announcing to-day that the 25th anniversary of Mr. S. H. Fairbank's Advertising Agency occurs to-day. Mr. Fairbank commenced the advertising business in this city in 1851, and he is, therefore, one of the oldest advertising agents in the United States. People knew but little about advertising agencies prior to his time, and he was for advertising being made directly with the publishers of newspapers; but now a large portion of the business is done through advertising agents. Many such houses have been started, but comparatively few have been successful in establishing a permanent business. We are glad to say that Mr. Fairbank is among the most successful, and by a judicious and careful management of his business, has built up in this city one of the most successful and reliable advertising agencies in the country."

FOR THE YOUNG FOLKS.

Cherry-Chook.

BY ANNA MARTHA WALLACE.

Cherry-Cherry-chook! cuddled and cooing,
Nestling in green leaves, and hiding from view,
The bills are dashed with mellow pink, the
The wee is going to bed,
In our cozy nest, so snug
I'm gone, she cooed to me,
And the twilight lingers on the wall;
Coaxes, Cherry-chook!

And drowsy as the sleepy hill
Blue hills, where
The sky round heavens were soft and calm,
With not a cloud in view
And after on the edge of the sunset
Cherry-chook, cuddled and cooing,
Coaxes, Cherry-chook!

Come out alone in a great wide place,
Where the sky is blue,
And the heard, in the frosty air
Of the dying summer day,
His father's mother sleigh-bells chime
A half-awake away!
A happy little boy—
Dear God! what a beautiful world you've made!
I am glad I was born to-day!

—*St. Nicholas.*

THAT BUNKER HILL FOUNTAIN.—Every good resident of history has learned that the battle of Bunker Hill was lost to the American chiefly because they had not water to drink.

A BINGHAMPTON farmer says it pays better to make both butter and cheese. He finds it best to keep his cheese late. The receipts and expenses of his farm showed a balance of $89.29 over seven per cent. on the amount invested, rating his 230 acres at $100 per acre.

THE Ayrshires have been celebrated for the production of cheese, and the Alderneys of butter. If the milk of the Alderneys is set for cream we find the cream readily separates, and the balance is poor and watery. The Ayrshire is capable of making more milk from a given quantity of feed than any other stock.

SOME of our best cultivators of fruit attach great importance to the stimulus the roots of fruit trees to run near the surface of the soil, and with the end in view they never cultivate or stir the soil surface, applying a top dressing of manure to make up the loss of fertility. They raise the excellent crops in this way.

IN the greenhouse of Mr. Mansfield at Newton, Massachusetts, a white cucumber rose, now over twenty years old, covering over one hundred square feet of roof, which has furnished twenty or thirty buds daily since December. It is estimated that there will be five private and 2,500 buds, which, at nine dollars a hundred, gives a profit of $225.

THE Ayrshire and Jersey breeders pay $200 per acre yearly rent for the land they cultivate, and their average profit amounts to $300 per acre. One English penny (equal to two of our cents) per square yard is equal to $100 an acre, and as there are nine and one-half acres in every square yard, these figures are not at all improbable.

THERE is a farm yield both wool and mutton. They multiply with great rapidity. They are the best of farm scavengers, cleaning a field from every other class of animals will. Guiding the steed to the door, the lady was received by her would-be lord, and soon the train were made one flesh, and the minister was left in possession of a good supply of beans.

Perceptions of the Blind.

The organ of vision is considered the most important organ of the human frame; yet many who were born blind have been enabled to see by mental sensation, and in an infinitely more interesting fact concerning one of that class:

A youth had become thirteen years of age, when he was pronounced by a surgeon. He thought scarlet the most beautiful color; black was painful. He fancied every object touched him, and he could not distinguish by sight what he felt by touch. Thus, when first, for instance, the cat and dog. When his second eye was touched, he remarked that objects touched his eyes as much as those touched his body. He was asked, which of the two sensations was the more agreeable, and he answered, the latter. He was asked, which of the two sensations was the more agreeable, and he answered, the latter. He was asked, which of the two sensations was the more agreeable, and he answered, the latter

THE ENTERPRISE.

PUBLISHED THURSDAY EVENINGS

—AT—

Manchester, Washtenaw Co., Mich.

—BY—

MAT D. BLOSSER, Editor & Prop'r.

MANCHESTER, APRIL 22, 1875

There is no doubt but that there is an abundance of coal at Brooklyn, but whether it will ever be mined or not is a question.

The Cincinnati COMMERCIAL says the variety of kisses introduced in the Beecher business is calculated to amaze people who do their kissing without assistance. There have been the paroxysmal kiss, the inspirational kiss, the impulsive kiss, the enthusiastic kiss, the holy kiss, the kiss of reconciliation, the kiss of grace, mercy and peace, and the kiss mutual. The other kisses are reserved for the betrothal and re-betrothal ceremony.

PERSONAL.

Dr. Bart Bennet and family, of Milan, were in town this week.

John Goodyear was in town over Sunday. He is now located at Milwaukee.

E. G. Schaffer the County Register of Deeds, was in town on Monday, calling upon his many warm friends. He is looking well.

Charles Ultes, M. D., of Ann Arbor, paid this village a visit on Monday, and we are informed by him that he intends coming here, on Monday next, to locate and practice medicine.

We saw our old friend Capt. Geo. W. Sherman, at Jackson last week. He has the management of the Union Hall, and Opera House is city bill poster and seems to be doing well.

While at Jackson, on Saturday last, we met Mr. A. R. Scott, advance agent of DeHaven's Racing Association and Hippodrome, at the Hurd House. He is making preparations for an exhibition on the 5th of May. Like all others it is said to be the largest combination traveling, but we know nothing of it.

BROOKLYN.

From Our Own Correspondent.

I see by the papers that "April fool's day" was held pretty universally all over the country. It was held here also. Among the many amusing episodes was the following. Little Charlie early in the morning placed a huge "hard head," weighing perhaps 15lbs. on the sidewalk between the Ennis Block and Cook's store, covering it nicely with an old hat. What a temptation it is to kick a solid hat! Everybody kicked that hat. I kicked it and have been nursing a new toe ever since.

Among the many who "experienced that particular hat, was Deacon A——, a fine old christian gentleman but blest with an unruly temper. He usually visits Culver & Clark's store every morning, after breakfast, spongs his pipe of tobacco, smokes the same and then returns home. That morning as usual, he was on hand, and having finished his pipe and the latest report of the "Beecher Scandal," started up the walk for home. That hat attracted his attention. He paused. The vigor of his youth seemed to have been restored to his frame. He kicked—kicked hard—and that No. 12 went with force enough to go right through that hat. The hat did not budge, but he did. Down he went on his knees, then on his hands; his hat flying one way and his cane another. He soon gathered himself up, balanced on one foot and his cane, and when looking around to see if the lightning had struck anybody else, he espied Charlie's head over the top of a dry goods box, with his mouth stretched from ear to ear. This was too much for the Deacon, and he muttered in a voice low and deep, but increasing in intensity as he proceeded, "If it was not for the love I bear for the meek and lowly Savior, I'd break every d—d bone in your body." This was more than the spectators could stand. We laughed and shouted ourselves hoarse, but he paid no attention, and picking up his hat he slowly wended his way homeward. "They say," but I will not vouch for the truth of the statement, that the next Sunday he contributed twenty-five cents for home missions."

A RAMBLE THROUGH KANSAS.

EDITOR ENTERPRISE.—I don't know whether it will interest you or not, but I am going to tell you of a little trip I had in Southern Kansas.

We left Independence on the 5th of January 19— for Arkansas City, Winfield and Wichita. There being no railroad in that direction I took the stage. I had company as far as Jay Hawk, a lady and her son occupied the back seat, and a drummer from Cincinnati and myself the front seat. The roads in that country are smooth, with the exception of an occasional bluff or a gulch. There are no bridges and some places selected to cross the river are frightful. We were out from the city about four miles, when all of a sudden the back seat was emptied and our seat was doubly loaded. At first I thought of getting mad, but second thought suggested that something must have happened. I looked out and found that we were in a gulch and not likely to get out immediately, as one horse had concluded to balk. Seeing he had laid I got out and walked ahead to see the country. About one-half mile from there I stopped at a house for a drink of water, and an elderly gentlemen said, "how do you do, Mr. M—." Of course I was glad to see him. I soon learned that his name was High, and that he was at home. We conversed about old Manchester and its vicisitudes, nearly an hour, when along came the stage and I got aboard without giving old balky time to bolt. We arrived at the next change and took dinner. The bill of fare included pork and potatoes. After dinner we started with a new team, and I took a seat with the driver. The prairie was as smooth as the floor of Goodyear Hall and I enjoyed the scenery, until we came to a creek with no bridge and very banks. I surveyed the situation and was glad that I could swim. We commenced to descend the bank very gently and nearly reached the water, when the stage commenced to slide sideways, finally it struck a log and threw the Cincinati drummer into the water. He soon gained his feet and expressed his mind freely on the different modes of baptism. He seemed to prefer sprinkling, when young. We righted the stage up and reached the next change, where we remained until morning. I occupied a bed of prairie feathers—corn stalks—and dreamed of the balky horse, the grasshopper plague, the brooklyn scandal, and awoke to learn that a big bed bug was trying to carry me from my bed to his own. I murdered that bug. Tired and disgusted I arose, and it was fortunate I did. The mail-man was obliged to leave the stage and take a buck board, consequently he could carry but one passenger, and I was the lucky man. Fresh pork and corn cake are good for dyspepsia—so is a buck-board carriage. We started at 6 a. m., and at 9 p. m., inside forty miles and reached the town of Cedar Vale. Everybody had retired, but we aroused a kind-hearted Englishman who got a splendid supper of cracked corn and water, baked before a fire place. I do not know when I ate a more hearty meal or one that I relished so well.

The following morning our mail man said he did not go any farther. I was still 35 miles from Arkansas City. A man and team was soon secured and after traveling until 7 p. m., we were 10 miles from the city, on the opposite side of Grouse creek, which was "a booming." We drove around about an hour and found a man, with whom I made arrangements to board until the creek subsided to its natural level. After supper I concluded that I was pretty well cursed, and called for my room. I climed the ladder, saw a blanket, a prairie pillow, and proceeded to occupy my "lonesome couch." Early next morning mine host said "pile out, Mr., hish is waiting." I piled, and was sadly disappointed to learn that the creek was still raising, and it was quite probable that I would be obliged to settle in that country. I stayed three days, and nothing happened to mar my solitude, except a thunder storm. I have seen April showers, also a good imitation of a hurricane, but never had Heaven's artillery jingle my toe nails previous to this occasion. The fourth day we hitched up the horses and started thro' the woods. This may sound strange, but we are in walnut valley, the best timbered section of Kansas. No incident transpired until we soon reached the river. On the opposite side lay the city, but I did not get there until supper time. I anxiously waited until a man came to receive 15cts and land me on the other side of the river.

Arkansas city is beautifully located on an elevation, between the Arkansas and Walnut rivers. The city is nicely laid out and contains many cosy buildings, and about 4000 inhabitants. I attended church Sunday, to see the border-bells. They are gorgeous, "you bet." If a railroad ever reaches this place to give it a growing impulse, it will soon become one of the most inviting cities in the west.

Having settled my business I bid this charming little spot farewell and started up the valley in search of Winfield. During the day we passed some of the best farming lands on the continent, and the farmers seem to know its true value.

At Winfield I was taken sick and remained a week. As soon as possible, I settled my business and hotel bill, and looked for conveyance eastward. A span of mustangs had been driven there by some traveling agent, and they offered them to me. Since I had been sick the weather had changed, but 16 degrees below zero didn't stop a Michigander. I bundled and the ponies started for Wichita. We made 70 miles in 24 hours and I stopped once, fed the ponies, ate three prairie chickens, a piece of pie, some bread and butter, got warm, etc. How is that for sickness?

Sometime I will conclude this trip and tell you how I tracked Atkins thro' a snow drift. Excuse my long letter, give respects, and I will remain yours truly,

A. H. M.

New Advertisements.

TO CONSUMPTIVES. The advertisement of a long-established and reliable chemist, whose name is known throughout the world, appears in this issue. Persons who believe themselves consumptive should read the advertisement and write to the address given, for it will send a copy of the prescription free of charge, and the medicines mentioned can be obtained of any druggist. They will find it a very valuable remedy for Coughs, Colds, Consumption, Asthma, Bronchitis, etc. Parties wishing the prescription will please advertise this paper. Rev. E. A. WILSON, 577—3m 194 Penn St., Williamsburgh, N. Y.

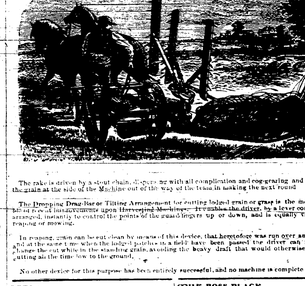
CHAMPION SELF-RAKER,

The Pride of the Harvest Field,

WARREN KIMBLE, Agt., at the Corn Exchange.



The rake is driven by a stout chain, depositing with all completion and congeaning and delivering the grain at the side of the Machine out of the way of the team in making the next round.

The Dropping Drag-Bar or Tilting Arrangement for cutting lodged grain or grass is the most valuable addition ever introduced upon Harvesting Machinery. It enables the driver, by a lever conveniently arranged, instantly to control the points of the cutting bar up or down, and is equally valuable in reaping or mowing.

In mowing, grain can be cut close by means of this device, that heretofore was run over and wasted, and at the same time, when the lodged portion is held here, the driver can instantly lower the cut while in the standing grain, avoiding the heavy draft that would otherwise follow if cutting at the time low to the ground.

No other device for this purpose has been entirely successful, and no machine is complete without it.

THE ENTERPRISE.

MAT D. BLOSSER, Editor.

MANCHESTER, APRIL 22, 1875.

Village and Country.

Get ready to set out shade trees.

The farmers say "no wheat this season."

Judge Marston is now on the Supreme bench.

The Supervisor is around with his satchel.

We had quite a snow storm on Monday evening.

The maple sugar season was short and sweet this year.

The Michigan Legislature will adjourn on the 30th inst.

A Greening fell from a load of hay at Ann Arbor, last week.

Miss Waite has commenced to teach the little "ducks" how to sitoot.

The late fall of snow caused people to take in their cabbage plants, and sich.

Ann Arbor people are becoming absent minded. One forgot that he had a horse, another that he had a nome.

Dr. E. E. Bigelow has moved his office from the Stowel block and has fitted up rooms over Baxter's store.

A lively communication from Jackson is crowded out this week. We advise boys to buy jewelry at the dollar store.

It is said that at Peru, Ind., the land is so poor that they have to manure it before it is rich enough to make brick.

The M. E. Sabbath School will give their quarterly concert at that church, on next Sunday, April 25th. Topic—Cross and Crown.

There was no school on Thursday afternoon, and a large number of the scholars attended the funeral of their late playmate, Vinnie FitzGerald.

It now turns out that the potatoes were not all frozen as was supposed by the farmers. They are selling at 50 cts. per bushel in this village.

We understand that a new tin and hardware store will be opened in this village about the first of May. Chambers & Somerville is the name of the firm, Union Hall block is the place.

The Manchester Enterprise has "patent bowels," prints from two to four columns of LOCAL NEWS and is the ONLY source from which the Jackson Citizen gets news from Norvell or Brooklyn.

The Hurd House at Jackson, is undergoing a complete system of repairs. Every room in the house is to be overhauled and re-furnished during the season. The "Hurd" is a good house to stop at.

There will be a Spelling School at the M. E. Church in this village, Wednesday evening, April 28th. Admittance 10 cents. The proceeds to be appropriated in the purchase of a carpet for the church.

We had the pleasure of riding to Brooklyn, on the new engine, on the D. H. & S. W. rail road, a few days since. It is a cool burner, is gotten up in first class style and it can run like all get-out. Mart Gorry is the engineer and he seems proud of her.

An angel dropped down upon us yesterday and gave our citizens a chance to get rich in the purchase of $1 worth of pens. Money is always plenty for such purposes and of course those who seized and blockaded by a crowd of youngsters, each one of them yelling, "Take me into the show, Mr. Robison; take me into the show!" John, making a virtue of necessity, went into temptations with the door-keeper, who agreed to let in a certain number for $1.50 cash. Planking it down, John Jr. rushed thro' the door-keeper in vain protesting that he was getting in too many for the money. After seeing his constituents happy, the genial John bade them farewell and went on his way a poorer but happier man.—[Argus.

VIGILANTI.

Mr. Peter Miller, one of our oldest residents, was buried with Masonic honors last Sunday. Mr. Miller came from the State of Pennsylvania here, and was held in high estimation, as an upright man, and an excellent mechanic. Many of our best buildings are the results of his labors. For a number of years he has been a consistent member of the Methodist church. His wife died but a short time since, and this great bereavement proved too great for him to sustain in the feeble state of health in which it found him. Thus one after another in quick succession the pioneers are passing away.—[Sentinel.

HEAVY ORDER.—Our manufacturers have their hands full this Spring. Mr. Barlow, inventor of the celebrated Hay Rack, is in town and has given Messrs Field, Blosser & Co., an order to build 100 racks, to be shipped to various sections of the country. These racks are very light, but it requires a good pile of lumber, bolts, and labor to fill the order before the haying season. However, Field, Blosser & Co., have the facilities and guns and will fill the contract.—They also manufacture Sash, Doors and Blind, and the Champion Washing Machines.

LIST OF LETTERS.—The following is the List of Letters remaining in the Post Office at Manchester, April 15, '75.

Amundson, O. C. Rev.
Brown & Porter.
C. C. Bell.
Curtiss, T. H.
Dunning, W.
Fuller, E. S.
Hampton, Miss Ella.
Tompkins, Leonard.
Mallie, Lorenzo
Kearns, C.
Dorlon, Christian
Deuel George
Gardner, Mrs.
Porter, Martha
Stevens, Mrs.

In calling for the above, say "advertised."

C. WALDRIDGE, P. M.

CARPETS.

As time approaches for house-cleaning the prudent better-half very naturally suggests that propriety and comfort requires a change of carpet, curtains, etc., to indicate spring and summer. A consultation is held with "other-half," and they search for advertisements to get posted in the latest styles and prices.

While at Jackson, we stepped into the "Sabin Store" and Mr. Sanford, the gentleman who has charge of the carpet-rooms, invited us to inspect some of their late purchases in English, Ingrain, Brussels, Tapestry, Ingrain, Etc., which we gladly accepted. With ease, grace and polite manners, he unrolled dozens of pieces of the most beautiful designs we have ever seen, costing from 45 cents to $2.50 per yard. Last fall we visited this place and found what we supposed, the finest patterns that could be made, but we were mistaken, they have now more elegant designs in which delicate tints of all colors lend a grace which is truly fascinating. The rooms were crowded with customers who apparently understood and appreciated the extreme low prices that these goods were selling at, and while our escort was waiting upon some ladies, we turned our attention to Curtains, Fixtures, Cornices, Lambequins, Stairgoods, Mats, Etc. In this line we found many new things, some of which were delightful. Mr. Sanford has excellent taste in designing lambequins, and the Sabin Store gets a large part of the trade of Central Michigan in this line. Those visiting Jackson in search of carpets, dry goods, or anything of that kind, should, by all means, visit the Sabin Store.

COUNTY NEWS.

ANN ARBOR.

A little child about two years old fell from the second story window of a house in the fourth ward a few days since and was not injured in the least.—[Courier.

The mother of C. H. Richmond, Esq., of this city, died at Aurora, N. Y., on the 1st inst., aged nearly 87 years.—Heavy fires were raging in the woods in the north part of Monroe County, last Saturday and Sunday, doing considerable damage.—Don J. Mosier, who was sent to the Asylum for the insane about six months ago, was returned to this city on Friday last, his case having been pronounced incurable by the physician of that institution, and is now confined in the County House.—The drug firm of C. A. Leiter & Co., have failed, the sheriff having closed them up on Wednesday, on complaint of Detroit and other eastern creditors. Hinchman & Co., of Detroit, have quite a large claim, and the other claims are reported small on themselves, but aggregating quite a large amount. It is thought the liabilities will range between $8,000 and $5,000. The assets are not known, but an invoice is being made.—Our friend John J. Robinson seems to have lost none of his old time popularity here. Being in town Wednesday evening, while passing by the Opera House, he was surrounded, besieged and blockaded by a crowd of youngsters, each one of them yelling, "Take me into the show, Mr. Robison; take me into the show!" John, making a virtue of necessity, went into temptations with the door-keeper, who agreed to let in a certain number for $1.50 cash. Planking it down, John Jr. rushed thro' the door-keeper in vain protesting that he was getting in too many for the money. After seeing his constituents happy, the genial John bade them farewell and went on his way a poorer but happier man.—[Argus.

VIGILANTI.

BEAUTIFUL GOODS.—Mrs. Thompson has received her Spring and Summer goods, and the display at her store is one of the largest and best ever offered in Manchester. The many styles of hats, bonnets, ribbons and flowers, are very neat, sensible and cheap. We noticed some twenty new styles of hats, awaiting orders to be trimmed from the profusion of ribbons, flowers and plumes, to suit the taste of the purchaser. She would be pleased to have those who wish millinery goods, call and price her new stock.

HEAVY ORDER.—Our manufacturers have their hands full this Spring. Mr. Barlow, inventor of the celebrated Hay Rack, is in town and has given Messrs Field, Blosser & Co., an order to build 100 racks, to be shipped to various sections of the country. These racks are very light, but it requires a good pile of lumber, bolts, and labor to fill the order before the haying season. However, Field, Blosser & Co., have the facilities and guns and will fill the contract.—They also manufacture Sash, Doors and Blind, and the Champion Washing Machines.

A petition from Chas. Gwinner, Burtless and others, in regard to putting in a new pump in well near the Goodyear House, was received, and on motion was referred to committee on ways and means with instructions to put in a new pump and repair otherwise if necessary.

Petitions from Mr. Beeton and Whister were received and referred to committee on license, who immediately reported unfavorably to the petitions, which report was accepted.

The committee on cla

AGRICULTURAL ITEMS.

MORE wheat was sown last fall in Arkansas than in any previous year.

THE Delaware peach growers report the peach bud condition as far.

AT a poultry show in Elmira, New York, a goose hatched in 1865 is the principal curiosity.

A KENTUCKY farmer averaged 1,850 pounds of tobacco to the acre, which brought $20 per hundred all around.

In transplanting most forest trees for shade, it is important that they be set with the same bearings as before, the points of the compass as that in which they grew.

MR. CRANE reports an experiment by a woman in treating the cabbage-fly with a strong solution of soot water. It destroyed the worms without injuring the cabbage.

A WITNESS in a Catskill libel suit thus described the poverty of a defendant: "The crop was so stunted and short that the toads could sit on their barrels, and pick bugs off the tassels."

THREE massachusetts growing under a flagstone weighing eighty pounds, is an English town, lifted the stone out of place. The vegetable had begun to show signs of being developed into a number of humans.

THE wool interest, which has been making rapid strides in California, is constantly strengthened by importations of thoroughbred sheep. So large are the demands for blooded sheep that many breeding farms have already been established.

A WESTERN paper says that three farmers in Genessee county, Michigan, have recently purchased, in Western New York, three yearling Short-horns, for which they paid $1,225. A half interest in a yearling ram was purchased at the same time, for $100.

DR. J. V. C. SMITH describes the olive as looking something like a willow tree, bearing fruit which, when ripe, resembles a dark damson plum. An olive when pressed yields about one spoonful of oil. The wood is of great value for the manufacture of articles of use, and the tree for its fruit and oil as food.

A FRENCH naturalist has ascertained by careful investigation that a single insect might, in five generations, become the progenitor of five thousand million of descendants. With these appalling figures before us, we can only draw the conclusion that, were the birds destroyed, a desolation would result, compared with which the grasshopper plague of the West would sink into insignificance.

THE culture of trees in the United States is becoming quite extensive. Five or six years ago, Congress offering one hundred and sixty acres of land to any person who would plant forty acres to tree and cultivate them for eight years, about eleven hundred persons, it is stated, had taken up the offer and commenced planting sota up to January. The demand for young trees to set out this spring in California is quite great.

A MAINE farmer raised last season 1,254 bushels (sixty pounds each) of rutabaga or yellow turnips, on forty acres. The farmer describes how he did it thus: The land was plowed in November. Twelve cords of manure were drawn on it in the winter and early spring. It was harrowed several times. The seed was sown in rows twenty-eight inches apart. Plaster was applied to the plants, and they were thinned to six inches apart. They were cultivated two or three times with horse, and with hand hoes as needed.

A FARMER's daughter having, from childhood, heard her father call a different gentleman, he puts the following to them, viz: "There are three gates between my house and the orchard. The first is a hard and choose a certain number of apples, the one who can choose such a number as to leave half the number and half an apple at the first gate, and half the remainder and half an apple at the second gate, and half the remainder and half an apple at the third gate, cutting no apple in two, shall have the apples into the house to my daughter, shall have her hand. Question: What is the number?"

GEN. ANDERSON found in Egypt, enclosed in a sarcophagus, beside a mummy, a few seeds which certainly grew and ripened on his return. They grew and matured enough to plant quite a plot the yellow-flowered seed. The plant grew to a tall over six feet high, loaded with blossoms of exquisite fragrance and delicate rose-line. It proved to be a species of linseed, shall near the root, but increasing greatly in size and bulk toward the top. It is supposed to contain a narcotic. The pods are upon the top. The pear are of a fine flavor, and an excellent, stable variety. So says the *Scientific American*.

The Process by which Rubber Goods are Produced.

The juice of the caoutchouc tree undergoes many curious mutations before it is brought into the form of a large building, filled with great iron troughs and odors far from spicy, many men are seen in one of the rooms, which is fight cut into pieces and then partially macerated and washed clean from impurities, emerge at the length in the form of long strips of a dirty white color, and like pancakes of unbleached Turkish toweling. It is now ready for the macerating mills, wherein it is worked up with water till it assumes the appearance of the chewed India rubber dear to schoolboys. As the macerator slowly revolves, it squeezes out the tenacious juice, a dark-looking viscid mass, only to seize it again and repeat the operation until the product becomes homogeneous, when it is ready for the cylinders. In these it is squeezed into a tube, from which it issues round, like other gum-elastic, and is cut into lengths, ready for the manufacture of articles of use, and the tree for its fruit and oil as food.

Two Defected Tricks.

MONACHE D. Carlton writes to the Cortlandt (Connecticut) from London, so far from home.

The mystery of "Psyche" has been solved. You remember that "Psyche" is the wonderful automaton exhibited by Maskelyne, the conjurer, which, in a long glass case, is seen handling the finest and scientific men by its accurate playing of cards, etc. The secret has been long connected with and guided by a human brain was, for a long time, certainly but a little ingenuity, indeed, in the form of a simple glass cylinder, and no possible connection with any one behind the curtain, or anywhere else, was supposed. The secret remained, however, for a short time, but soon all demands for blooded sheep that may breeding farms have already been established.

A WESTERN paper says that three farmers in Genessee county, Michigan, have recently purchased, in Western New York, three yearling Short-horns, for which they paid $1,225. A half interest in a yearling ram was purchased at the same time, for $100.

The juice of the caoutchouc tree undergoes many curious mutations before it is brought into the form of a large building, filled with great iron troughs and odors far from spicy, many men are seen in one of the rooms, which is fight cut into pieces and then partially macerated and washed clean from impurities, emerge at the length in the form of long strips of a dirty white color, and like pancakes of unbleached Turkish toweling. It is now ready for the macerating mills, wherein it is worked up with water till it assumes the appearance of the chewed India rubber dear to schoolboys. As the macerator slowly revolves, it squeezes out the tenacious juice, a dark-looking viscid mass, only to seize it again and repeat the operation until the product becomes homogeneous, when it is ready for the cylinders. In these it is squeezed into a tube, from which it issues round, like other gum-elastic, and is cut into lengths, ready for the manufacture of articles of use, and the tree for its fruit and oil as food.

A Fakeer Immortality.

A Fakeer immortality has been ascertained by careful investigation that a single insect might, in five generations, become the progenitor of five thousand million of descendants. With these appalling figures before us, we can only draw the conclusion that, were the birds destroyed, a desolation would result, compared with which the grasshopper plague of the West would sink into insignificance.

THE culture of trees in the United States is becoming quite extensive. Five or six years ago, Congress offering one hundred and sixty acres of land to any person who would plant forty acres to tree and cultivate them for eight years, about eleven hundred persons, it is stated, had taken up the offer and commenced planting sota up to January. The demand for young trees to set out this spring in California is quite great.

A MAINE farmer raised last season 1,254 bushels (sixty pounds each) of rutabaga or yellow turnips, on forty acres. The farmer describes how he did it thus: The land was plowed in November. Twelve cords of manure were drawn on it in the winter and early spring. It was harrowed several times. The seed was sown in rows twenty-eight inches apart. Plaster was applied to the plants, and they were thinned to six inches apart. They were cultivated two or three times with horse, and with hand hoes as needed.

A FARMER's daughter having, from childhood, heard her father call a different gentleman, he puts the following to them, viz: "There are three gates between my house and the orchard. The first is a hard and choose a certain number of apples, the one who can choose such a number as to leave half the number and half an apple at the first gate, and half the remainder and half an apple at the second gate, and half the remainder and half an apple at the third gate, cutting no apple in two, shall have the apples into the house to my daughter, shall have her hand. Question: What is the number?"

GEN. ANDERSON found in Egypt, enclosed in a sarcophagus, beside a mummy, a few seeds which certainly grew and ripened on his return. They grew and matured enough to plant quite a plot the yellow-flowered seed. The plant grew to a tall over six feet high, loaded with blossoms of exquisite fragrance and delicate rose-line. It proved to be a species of linseed, shall near the root, but increasing greatly in size and bulk toward the top. It is supposed to contain a narcotic. The pods are upon the top. The pear are of a fine flavor, and an excellent, stable variety. So says the *Scientific American*.

The Process by which Rubber Goods are Produced.

The juice of the caoutchouc tree undergoes many curious mutations before it is brought into the form of a large building, filled with great iron troughs and odors far from spicy, many men are seen in one of the rooms, which is fight cut into pieces and then partially macerated and washed clean from impurities, emerge at the length in the form of long strips of a dirty white color, and like pancakes of unbleached Turkish toweling. In these it is squeezed into a tube, from which it issues round, like other gum-elastic, and is cut into lengths, ready for the manufacture of articles of use, and the tree for its fruit and oil as food.

The Violet as a Bonapartist Emblem.

The *Spectator*, speaking of this flower as the symbol of one of the political parties in France, says: The violet was the emblem of the emblem dates from the first years of the Restoration, and was to be seen always in the center of the table. But a decorated active as of the Treaties Franks, she was a Bonapartist, and did not disguise her sentiments. The violet, in the Hundred Days, while playing in a vase, was seen to appear with a bouquet of these flowers, her bosom. The violet caused great excitement in consequence. Its presence was attributed to the violet, which was in season when Napoleon returned from Elba, at the end of the Hundred Days, and the violet in the hands pass on a traveling bed under a carriage furnished with flowers. The violet which rolled state at regular intervals, and finally cut off the land into large, [illegible] The day after the arrival of the Emperor in Paris every individual [illegible] the political meaning of the violet had [illegible] and in their buttons. That the sentiment was the striking point [illegible] the political meaning of the violet had [illegible] manifestation of Mlle. Mars [illegible] the meaning of the symbol.

Two Defected Tricks.

MONACHE D. Carlton writes to the Cortlandt (Connecticut) from London, so far from home.

The mystery of "Psyche" has been solved. You remember that "Psyche" is the wonderful automaton exhibited by Maskelyne, the conjurer, which in a long glass case, is seen handling the finest and scientific men by its accurate playing of cards, etc. The secret has been long connected with and guided by a human brain was, for a long time, certainly but a little ingenuity, indeed, in the form of a simple glass cylinder, and no possible connection with any one behind the curtain, or anywhere else, was supposed. The secret remained, however, for a short time, but soon all demands for blooded sheep that may breeding farms have already been established.

A WESTERN paper says that three farmers in Genessee county, Michigan, have recently purchased, in Western New York, three yearling Short-horns, for which they paid $1,225. A half interest in a yearling ram was purchased at the same time, for $100.

DR. J. V. C. SMITH describes the olive as looking something like a willow tree, bearing fruit which, when ripe, resembles a dark damson plum. An olive when pressed yields about one spoonful of oil. The wood is of great value for the manufacture of articles of use, and the tree for its fruit and oil as food.

A FRENCH naturalist has ascertained by careful investigation that a single insect might, in five generations, become the progenitor of five thousand million of descendants. With these appalling figures before us, we can only draw the conclusion that, were the birds destroyed, a desolation would result, compared with which the grasshopper plague of the West would sink into insignificance.

VOL. 8.—NO. 31. MANCHESTER, MICH., THURSDAY, APRIL 29, 1875. WHOLE NO. 395.

VINEGAR BITTERS

VEGETABLE PURE FREE FROM ALCOHOL

DRAKE'S CALIFORNIA BITTERS

VINEGAR BITTERS

Dr. J. Walker's California Vinegar Bitters are a purely Vegetable preparation, made chiefly from the native herbs found on the lower ranges of the Sierra Nevada mountains of California, the medicinal properties of which are extracted therefrom without the use of alcohol. The question is asked, what shall we do with our hopeless, unprecedented success of VINEGAR BITTERS? Our answer is, that they remove the cause of disease, and health returns to the system healthy. They are the great blood purifier, and a life-giving principle. They are a gentle stimulant when required, yet contain no intoxicating principle. They are a mild aperient, combining the properties of valuable vegetable tonics, which are unsurpassed as a blood purifier, and will prove a most valuable stimulant to the aged, infirm, and those requiring a tonic.

We would no more be without Dr. Walker's Electric Sudgmade by Cragin & Co., Philadelphia, than we would be without our wives or children. It is pure, and does its own work without the slightest injury to the system. It is a strong cordial, without the use of alcohol. "What is the cause of this unprecedented success of VINEGAR BITTERS?" Our answer is, that they remove the cause of disease, and health returns to the system healthy. They are the great blood purifier, and a life-giving principle. They are a gentle stimulant when required, yet contain no intoxicating principle. They are a mild aperient, combining the properties of valuable vegetable tonics, which are unsurpassed as a blood purifier, and will prove a most valuable stimulant to the aged, infirm, and those requiring a tonic.

The properties of DR. WALKER'S VINEGAR BITTERS are Aperient, Diaphoretic, Carminative, Nutritious, Laxative, Diuretic, Stimulant, Counter-Irritant, Sedative, Alterative, and Anti-Bilious.

Dr. J. WALKER & CO., Druggists and Gen. Agts., San Francisco, California, and cor. Washington and Battery Sts., New York. Sold by all Druggists and Dealers.

WHISKERS This easily prepared preparation that gives a beautiful Black or Brown to Whiskers, Mustaches, or Eyebrows, is warranted not to stain the skin. Sent by express, on receipt of $1. Address, Lyon Manufacturing Co., 16 Ann St., N. Y.
