

# A.I. SIRE SUMMARY

By Ivan L. Mao & Clinton E. Meadows, Extension Dairy Specialists

This report contains the latest USDA sire information for 264 sires which were available to Michigan dairymen through the four stud barns as of January 1974. Each sire had 10 or more daughters reported to USDA with production information. The 264 sires in this report have an average predicted difference +543 milk, +16 fat, +35 dollar value.

Table 1. Average Predicted Difference for Dollar Value by Breed and Stud

Stud	- - - - - Breed - - - - -				
	Ayrshire	Guernsey	Jersey	B. Swiss	Holstein
ABS	\$24	\$40	\$34	\$57	\$42
CURTISS	\$10	\$ 8	\$28	\$ 2	\$27
GENETICS	\$40	\$20	\$32	\$12	\$41
MABC	\$59	\$30	\$23	\$54	\$38
BREED AVG.	\$36	\$28	\$29	\$35	\$37
NO. OF BULLS	11	23	26	14	190

Sires are ranked by the superiority of their daughters to herdmates as expressed by the Predicted Difference value for income. This combines economic aspects for both milk and fat. It is the best estimate of the inheritance each sire passes on to his daughters and reflects their ability to produce under the wide range of conditions found in A.I. herds. Those Holstein sires with shaded numbers and names should not be used unless in special situations.

### Explanation of Headings

\*REGISTRATION NUMBER and NAME of sire. \*STUD CODE for technicians.

\*NO. HERDS in which records were made. \*NO. DAUS. with production records.

\*PCT. INC. (percent incomplete) represents the portion of a sire's daughters in their first lactation that died or were sold before milking 305 days.

\*PCT. RPT. (percent repeatability) is an index value which expresses the completeness of information on each sire. It also indicates the reliability of these present and past daughters in predicting future daughters' production.

\*PREDICTED DIFFERENCE is a measure of a sire's ability to transmit production potential. Predicted Difference indicates the amount of MILK, PCT (% test), FAT, and \$\$\$ (dollar value) that future daughters of a sire are expected to differ from their herdmates, under A.I. conditions. Prices used were \$7.00 per cwt. for 3.5% milk with an 8.4 cent fat differential. The dollar value is the gross value of product that future daughters should return per lactation over herdmates.
