NOTE TO THE GROWER

EXTENSION BULLETIN E-675 (A—T) presents guidelines for **commercial production** of vegetables in Michigan, including harvesting, post-harvest handling, and storage. For weed, insect and disease controls, consult the other MSU publications listed under appropriate headings.

The recommended varieties listed are adapted to Michigan conditions. Growers are urged also to try **new** varieties and cultural practices developed for the Midwest and Northeast, but on a small scale at first so as to involve only limited acreage in case the trials are not successful.

Most varieties developed for the Southeast or Southwest are not normally adapted to Michigan, primarily because of different day lengths and/or disease problems.
