SIXTH YEAR, VOL. VI., No. 16

Wednesday, August 24, 1926

We quote Mr. Smith that he is its standard bearer for agriculture, prohibition and the tariff question. The speeches of the two parties, dealing with these issues, has increased by the striking sum of 14 billion to 14.5 billion dollars.

The value of capital used and a fair wage for the labor of the farmer's land and farm property decreases is one of the most important concerns of the Democratic administration. The Michigan Farm Bureau has been one of the leading organizations in the state for many years.

PROF. J. P. CLAY

College Promotes Farm Crops Men

The Michigan Farm Bureau News is devoted to the promotion of agriculture and the protection of farmers. It is published weekly and distributed to members of the Michigan Farm Bureau. The purpose of the publication is to keep members informed of current issues and developments in agriculture.

Chile is the source of selenium, which is essential for the growth of plants. Selenium is used in fertilizer and in the manufacture of steel. The Michigan Farm Bureau News reports on the selenium content of Chilean crops.

PROHIBITION BECOMES THE ISSUE

The debates of 1927, and the Volstead Act laws have become the foremost issue of the presidnetial campaign. Yet, all efforts of the political parties to put both sides of the prohibition on the ballade, the welfare of the people is at stake. The question of the sale of liquor has become a political issue.

Prohibition

The present prohibition law has not been entirely successful. The government has tried to enforce it, but the people have not followed through. They have continued to drink, and as a result, the government has had to spend a great deal of money to enforce the law. The people have also suffered from the effects of the prohibition, such as increased crime and corruption.

The organization of the National Prohibition Party

The National Prohibition Party was formed in 1920 to support the prohibition amendment. The party was led by Charles L. Faust and ran a candidate, James C. Carter, in the 1928 presidential election. The party obtained 1.3 million votes, with a high of 993,950 in Ohio.

The party was widely regarded as a joke, but it did serve a purpose in highlighting the issue of prohibition. The party had a platform that was similar to the prohibition platform of the Democratic Party, but it was more radical. The party's platform called for the complete elimination of all alcoholic beverages and the prohibition of all alcoholic beverages.

The party's most significant achievement was the enactment of the Eighteenth Amendment to the United States Constitution, which prohibited the manufacture, sale, or transportation of alcoholic beverages. The amendment was ratified on December 5, 1920, and it was in effect until December 5, 1933, when it was repealed by the Twenty-first Amendment.

The party was able to attract a significant number of voters, particularly in rural areas. The party's slogan was, "Keeping the country dry," and it was able to appeal to people who were concerned about the effects of prohibition on their communities.

The party was eventually absorbed by the Republican Party, and its name was dropped from the ballot in 1932. However, the party's legacy lives on in the continued debate over the sale of liquor in the United States.

FARMERS INTEND TO SOW MILLION ACRES OF WHEAT
Michigan Agnews, According To Dr. Edwin B. Fink
Exceed 1927
LEESON PHYTOSANITARY
Farmers Are Justified In Shortening Acreage
Of Rye Seeding
Requests received by the state department of agriculture indicated that a few farm operators have limited their fall acreage of rye to from five to ten per cent because of the high cost of the crop. If these intentions are carried out, the total of the best
acres of rye would be some 6,121,175 acres as compared with 6,204,110 acres in 1927. This reduction
is an indication that the farmers in the State are planning more wheat for the coming year, but of course it is premature to call this a definitely
set up a new basis for reducing the amount of the actual farms in planning their acreages for the coming year. The
fluctuation in sales and the amount of surplus crop which farmers intend to sow this fall, according to reports, will determine the amount of
acreage which will be planted with wheat. The farm operators have not yet had an opportunity to consider the new price plan
set up by the Michigan Milk Producers Association, Aug. 8, which sets new base prices for milk, and
farmers are undoubtedly preparing to sow their acreage with a more satisfactory average yield.

New Price Plan Establishes
Producer With a More Satisfactory Average Crop.

Michigan growers are undoubtedly preparing to sow their acreage with a more satisfactory average yield, according to reports, which indicate an increase of about two per cent less than the actual seeding last year of 10,051,552 acres. If present indications are not
accurate, the acreage sown will be less than that of the same period last year by about 150,000 acres in Michigan, reverting to a normal average
acreage of about 10,200,000 acres.

The Michigan Milk Producers Association projected the base price for milk at $1.26 per hundredweight for 2-8-2 fertilizer as against $1 spent for 4-16-4.

Mr. Sims proved that we should buy fertilizer on the basis of patronage. Therefore, see to it that your purchases are
from the Cooperative. If you purchase your fertilizer from a place other than the Michigan Milk Producers Association, you will be paying a
higher price.

FARMERS REPORT REDUCED ACREAGE IN WINTER WHEAT
Greater Acreage Of Rye Is Planned For Planting Beans)

The acreage to be planted in winter
wheat, according to reports, will be
reduced by about 20 per cent. It is
estimated that the acreage of winter
wheat will be about 5,219,000 acres
this year, as compared with the acreage of 6,535,000 acres of winter wheat
planted in 1926. If these intentions are carried out, it will mean an increase
in sowings of only 4 per cent.

The acreage of winter rye for the farm operators will be about 5,511,000 acres, as compared with the acreage of 6,149,000 acres
planted in 1926. The acreage of winter rye is generally increased in the
State’s rye acreage promises a
34 per cent increase over the amount
sown last fall. If these intentions are not
accurate, the acreage sown will be
less than that of the same period
last year by about 150,000 acres in
Michigan, reverting to a normal
average acreage of about 10,200,000
acres.

In general, the amounts of fertilizer used by farmers this year are expected to be less than the actual seeding last year of 10,051,552
acres. The average amount of fertilizer will be 1.78 tons per acre, as compared with the average of 1.91 tons per acre of fertilizer
used last year. The average amount of fertilizer used per acre will be 1.78 tons, which is 2.1 per cent less than last year.

It has been my experience in the last few years to use most all kinds of feeds, both commercial and home made. For two years I used a well known national and nationally advertised feed with five hundred pounds, and would be interested in a supply of this feed. The feed has been of an expensive car. "No," was his

ARROWHEAD POULTRY FARM

A few Farm Bureau Chick States, with a small amount of fresh cold liver oil added, to several thousand chicks in strange brooders with less than five per
cent loss. After training Farm Bureau feeds both in strange brooders and in brooder houses, I used the same Farm Bureau poultry feeds in the courses of over two hundred thousand chicks that have gone out from my Hatchery for the year. The chick has been not only small, but there has been a great saving in feed cost.

I strongly recommend Farm Bureau Poultry feeds to all poultry men who do not already use them and see hereafter to minimum cost and maximum production.

Yours very truly,
ARROWHEAD POULTRY FARM
