How Close Farmers Are to Passing Show

At Conventions By Radio

What Will Farmer Do?

By Mrs. Eileen N. Weisk

This is a great convention of ours and we are glad that you could be here. I have wondered if the farmers in 1927 would have been as interested in the local market with a billion dollars on the pas of the Hudson.

In the midst of the fact that two Boards of distinguished engineers, appointed by the State of New York, reported favorably on the plan of the Hudson, recommending that the present New York Falls Canal should be the best destination.

The Federal Government, the United States Army, and various boards of Engineers appointed by the United States Congress, have given the greatest attention to the problem of the St Lawrence waterwayand to the St Lawrence seaway. I am sure that the engineers would be interested in the problem of the New York Falls Canal.

I have never seen a more wonderful and beautiful and a proposed canal than the New York Falls Canal. I want you to consider the problem of the New York Falls Canal today. I want you to consider the problem of the New York Falls Canal today.

FARMERS AND BETTER FARM DOLLARS

Financing is the key to the prosperity of our country. There are many factors in farming, including Agricultural prices, particularly of the big staple commodities, as well as the conditions in the manufacturing sections of the country. For example, while exports of corn exports are now well above the average, the export of tobacco is still below the average.

Another good sign is the improvement in general business. The price of the gold bond is now above 92, and the price of the 20-year bond is now above 85. These are encouraging signs. For example, while prices of tobacco are now well above the average, the export of tobacco is still below the average.

The gold bond is now above 92, and the price of the 20-year bond is now above 85. These are encouraging signs. For example, while prices of tobacco are now well above the average, the export of tobacco is still below the average.

Why They Grow Alfalfa

Its Feeding Value

1. An ideal feeding value provides essentials for maintenance growth, and rapid weight gains. It is the best all-around type of feed for heavy stock, and is suitable for light stock. Alfalfa is a high protein feed.

2. It contains essential amino acids and vitamins. It provides a complete diet for all classes of livestock. Alfalfa is an excellent roughage feed for dairy cattle. It provides a good source of energy and protein.

3. It is easily digested, and is a good source of vitamins and minerals. Alfalfa is a good source of vitamins A and C. It is a good source of calcium and phosphorus.

4. It is palatable and is a good source of roughage. Alfalfa is a good source of roughage for horses, and is a good source of protein for cattle.

Its Economy of Production

1. Long days (10 to 12 hours) during the growing season produce a crop of alfalfa that is high in protein and粗fiber content. Alfalfa is a high protein feed.

2. Alfalfa is a good source of energy and protein for both dairy and beef cattle. It is a good source of vitamins and minerals.

3. It is a good source of roughage for horses, and is a good source of protein for cattle. Alfalfa is a good source of vitamins A and C.

4. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

Its Wide Adaptation

1. It is planted in a wide range of climatic conditions. It is a hardy plant, and is a good source of roughage for horses.

2. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

3. It is a good source of roughage for horses, and is a good source of protein for cattle. Alfalfa is a good source of vitamins A and C.

4. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

Its Benefits to the Soil

1. It improves the soil's structure, and is a good source of roughage for horses. It is a good source of protein for cattle.

2. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

3. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

4. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

Its Use Upon the Farmer and His Farm

1. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

2. It is a good source of roughage for horses, and is a good source of protein for cattle. It is a good source of vitamins A and C.

Government Stocks Lakes of Glacier National Parks

Barron W. Planted With Fresh Water Fish Paving Proven Fishable

Artificial introduction of fish in the continental United States has proved to be a method of multiplying the numbers of certain species. This is done by transplanting fish to new waters. A recent example of this method is the establishment of a large lake near Barrow, Alaska. The lake was created by diverting a stream into a natural basin. Over 10,000 fish were released into the lake, and within a few years, the population had increased to 100,000. The fish are now well established in the lake and are providing good sport for anglers.

Northwestern Shoshone County Members Meet

Members and friends of the Shoshone County Farm Bureau met at the courthouse in Parshall, North Dakota, for the annual meeting of the organization. The meeting was held on Saturday, June 20. The program included reports from various committees and officers of the bureau. The state Farm Bureau report was given by Mr. F. G. Wright, district director. The report included information about the progress of the organization during the past year. The meeting ended with the election of officers for the coming year. The new officers are: President, Mr. F. G. Wright; Vice-President, Mr. H. J. Johnson; Secretary, Mr. H. W. Brody; and Treasurer, Mr. J. H. Brody.

Salt Your Hay With Non-Caking Salt

Salt Your Hay

In the evening, brief addresses were given by Mr. F. G. Wright, district director, and Mr. J. H. Brody, secretary-treasurer. Mr. Wright spoke of the needs of the membership and the importance of the Farm Bureau. He emphasized the role of the Farm Bureau in providing services to the farmer. Mr. Brody spoke of the progress of the organization during the past year and the plans for the coming year.

The Lazy Farmer's Opinion of Alalfa

Alfalfa has been considered one of the most important forage legumes for livestock feeding. It is a hardy and drought-resistant plant that can be grown in a variety of soils. It is also a good source of protein and nutrients for cattle and sheep. However, it is important to manage alfalfa properly to maximize its productivity. Alfalfa should be planted in the spring and harvested in the fall. It should be cut when the plants are in the early to mid-bloom stage. Alfalfa is most productive when it is grown in a well-drained soil. It is important to rotate crops with alfalfa to prevent the build-up of diseases and pests.
