MARCH 2, 1928

The Business of the Farmer

Everybody took part in the business meeting of the Michigan State Farm Bureau, which all of those present joined in.

There is something wrong with the days of the farmer living from agriculture.

On March 1 of each year the books will be called in by the Treasurer and all dividends will then be issued. According to Governor Lowden, the Farmers' Union was a problem, with the Farm Bureau membership recognizing as truly co-operative. It is a remark that is truly one of the many successes of the Farm Bureau.

The Michigan Live Stock Exchange was organized in 1918 but was sold in 1928. The annual meeting was held the month before at Tenth Annual Meeting at State College February 2, 1928. The celebration was in the nature of a social event.

All of those present joined the Michigan State Farm Bureau, with some depressions and additional facts, Feb. 2. You will feel well repaid for your time.

To Issue Patronage Dividend Books Soon

Should Be In All Members' Hands Early In March

The Michigan State Farm Bureau believes that Patronage Dividend Books should be issued as soon as possible, and that they should be issued in the hands of those farmers who have not yet taken out the books and who have not done so. The Bureau will be pleased to have the books in as many hands as possible, and it will be further pleased if these books are distributed.

Dr. Dodd Reviews Our History For Answer

Annual Meeting Speaker Makes The Past Live Again As He Shows Where Organization In Other States Has Gone With Farmer

by DR. WILLIAM E. DODD

Prof. of History at University of Chicago

Our meeting was called to order by Dr. William E. Dodd, a remarkable address. "Small American Farmers Become Producers!" which is published in full in the next issue of the Farm Bureau Journal. We have heard so many addresses on the situation in which the farmer population has lived since the war, and it is well to have them again. We have read many articles and books dealing with the subject of the farmer population, and the most of these have happened to American farmers in the last we have ever seen.

Four times in our history have American farmers, under the guidance of wise leaders, been able to enjoy a peaceful life. It is well for us to take a careful look at these four times, and to ask ourselves whether we can ever again enjoy a peaceful life.

In the days when the farmer lived from agriculture, "The farmer must realize that he is the master of his own house and that he will not be swayed by any outside influence. He must realize that he is the master of his own house and that he will not be swayed by any outside influence. He must realize that he is the master of his own house and that he will not be swayed by any outside influence.

The main reasons for Farm Bureau, as stated by Prof. of History at University of Chicago Dr. Wm. E. Dodd, professor of history at the University of Chicago, are growing and will continue to grow if it is to keep pace with the changing conditions of the farmer population. Low production costs, and consequently a wider margin of profit for the farmer, are closely linked with alfalfa as hay for these cows.

The goal of alfalfa acreage, however, has not been reached. Alfalfa production costs, and consequently a wider margin of profit for the farmer, are closely linked with alfalfa as hay for these cows.

The goal of alfalfa acreage, however, has not been reached. Alfalfa production costs, and consequently a wider margin of profit for the farmer, are closely linked with alfalfa as hay for these cows.

On Michigan agriculture. The alfalfa farmer has become an important factor in the dairy industry of Michigan. Much more farmers, until a million and a half acres of alfalfa are grown in Michigan this coming season. Production costs, and consequently a wider margin of profit for the farmer, are closely linked with alfalfa as hay for these cows.

MICHIGAN FOLKS ATTEND NATIONAL INSURANCE MEET

Twenty Farm Bureau States Have Auto Insurance

A large delegation from the Michigan Farm Bureau attended the national insurance congress in Washington last week when the Farm Bureau leaders took advantage of the congress to seek increased policies and higher rates for automobile insurance. The Michigan Farm Bureau, like many of the other Farm Bureaus, hopes to increase the amount of automobile insurance sold by the State Farm Mutual Automobile Insurance Company. This has been a part of the Farm Bureau program for some years in some of the states and one of the purposes of the delegation to Washington was to acquaint the congress members with the situation in Michigan and to bring about a change in the policy of the company to make automobile insurance a part of the Farm Bureau program.

The delegation was made up of the following state officers: J. B. Byrd, president; R. B. Reddick, vice-president; F. P. Smith, Jr., and John R. Graylin, directors, and E. B. Tuttle, legislative secretary.

The delegation made a short trip up and back to Washington and other states to get away the work. It was brought to the attention of the congress members that the State Farm Mutual Automobile Insurance Company is making automobile insurance a part of its program, in the same way that it makes automobile insurance a part of its program up and 14 have adopted the program.

Farmers Mutual Fire Insurance Company is making automobile insurance a part of its program, in the same way that it makes automobile insurance a part of its program up and 14 have adopted the program.

On this day, Secretary Brody and others drew up a new plan for the development of the industry. The new plan was designed to stabilize the market and ensure fair prices for farmers. The plan involved the government purchasing goods at a fixed price, which would be passed on to farmers. This would help to reduce the volatility in prices and ensure a steady income for farmers.

The plan was met with mixed reactions. Some farmers welcomed the idea of a guaranteed price, while others were skeptical about the government's ability to control the market. However, the plan was eventually implemented and proved to be successful in stabilizing the market.

The plan was also a significant step in the government's effort to support the nation's farmers. It showed the government's commitment to ensuring that farmers were treated fairly and that they could earn a living from their work. The plan also set a precedent for future government interventions in the economy.

In conclusion, the plan implemented on this day was a significant event in the history of American agriculture. It demonstrated the government's commitment to supporting farmers and ensuring a fair market. While there were some challenges and reservations, the plan ultimately proved to be successful in stabilizing the market and improving the lives of farmers across the nation.
