State College Soils Man Reports Success Four Straight Years On Light Sandy Soils; Explains Advantages of System And Planting Procedure

By A. O. WEIDEMANN

Soil Department, Michigan State College, to the Quarterly Bulletin of the Experiment Station for November, 1928.

There are few experiments with alfalfa and clovers on the light sandy soils that have been as successful or given me as good results as those reported by Dr. A. C. Roberts and others for the past four years on the light sandy soils of the Michigan Experiment Station. These results are given in a paper in the November number of the Quarterly Bulletin of the Experiment Station, and we are able to give them here in a more general form.

The results of the experiments with clover and alfalfa on light sandy soils have been very satisfactory in every respect. The percentage of clover in the plots at the end of the second year was 97 per cent, and at the end of the third year it was 95 per cent. The percentage of alfalfa in the plots at the end of the second year was 97 per cent, and at the end of the third year it was 95 per cent. The percentage of clover in the plots at the end of the second year was 97 per cent, and at the end of the third year it was 95 per cent. The percentage of alfalfa in the plots at the end of the second year was 97 per cent, and at the end of the third year it was 95 per cent.

DIFFICULTY WITH SHIPPING SEED

Another difficulty with light sandy soils is that of shipping the seed. The seed is much more expensive to ship on light sandy soils than on heavy soils. The seed is much more expensive to ship on light sandy soils than on heavy soils. The seed is much more expensive to ship on light sandy soils than on heavy soils. The seed is much more expensive to ship on light sandy soils than on heavy soils.

First, either method causes it necessary for the farmers to plant the seed early. Second, even if one method is used, the seed must be planted earlier in the light sandy soils than in the heavy soils. Third, the seed must be planted earlier in the light sandy soils than in the heavy soils. Fourth, the seed must be planted earlier in the light sandy soils than in the heavy soils. Fifth, the seed must be planted earlier in the light sandy soils than in the heavy soils.

Fruit fly gives Florida farmers much extra work

The economic situation of Florida, particularly on the citrus lands, is such that the fly is a constant source of annoyance. It is estimated that the fruit fly has cost the citrus industry of Florida $10,000,000 in the past year alone. It is estimated that the fruit fly has cost the citrus industry of Florida $10,000,000 in the past year alone. It is estimated that the fruit fly has cost the citrus industry of Florida $10,000,000 in the past year alone.

With the beginning of the summer fruit fly season, the farmers are faced with an enormous amount of extra work. The fruit fly season is a time of year when the farmers are faced with an enormous amount of extra work. The dividend-paying policies of the Michigan State Farm Bureau have been the subject of a recent report. The Bureau has been distributing dividends to its members since its inception, and these dividends have helped to save members a significant amount of money. In fact, the total amount of dividends paid to members during the past year was over $100,000,000. This shows the importance of the Farm Bureau in providing financial benefits to its members.

The Michigan Farm Bureau is a strong advocate of co-operative farming, and its members are always looking for ways to improve their profits. The Farm Bureau has been instrumental in the development of co-operative purchasing and selling groups, and its members are able to pool their resources to buy and sell their products at more favorable prices. This has helped to reduce the costs of production and has resulted in increased profits for the farmers.

The Farm Bureau also plays an important role in advocating for the rights of farmers. It has been successful in securing legislation that benefits farmers, such as the Federal Farm Bill, which provides support for farmers in times of need. The Farm Bureau has also been successful in securing support for the extension service, which provides technical assistance to farmers.

In conclusion, the Michigan Farm Bureau is an important organization that is dedicated to the welfare of its members. It provides valuable services to farmers, and its efforts have helped to improve the financial stability of the farming community.

**More Women Than Men Acquire Great Wealth**

Interesting Tabulations Show How Women Are Coming To Front

Women are assuming an increasingly important role in the economy, and recent tabulations show that women are acquiring great wealth at an increasing rate. The data indicates that women are now participating in the workforce in greater numbers than ever before, and this has led to an increase in their economic power.

One of the most striking findings is that women are now holding a larger share of the wealth in the country than men. This is particularly true in the area of entrepreneurship, where women are starting their own businesses at a rate that is far higher than that of men. In addition, women are now acquiring a larger share of the stock market, and this is reflected in the increasing number of female-owned corporations.

The data also shows that women are more likely to hold more diversified portfolios, which helps to protect them from the volatility of the markets. This is particularly important in times of economic uncertainty, when it is crucial to have a mix of investments that can weather the storm.

In conclusion, the data indicates that women are now playing a more significant role in the economy, and this is reflected in their increasing share of wealth. This is a positive development, and it reflects the growing importance of women in society.

**DEDICATE COLLEGE DAILY BARN AUG. 2**

National Dairying Leaders Discuss Future of College Dairy Industry

In Big Program

Michigan State College is the scene of a big meeting of leaders in the dairy industry. The meeting is being held to discuss the future of college dairy programs, and it is expected to be attended by leaders from across the country.

The meeting will feature a series of keynote addresses by prominent figures in the dairy industry, as well as panel discussions and workshops. The goal of the meeting is to develop a common vision for the future of college dairy programs, and to determine how best to support these programs.

In conclusion, the meeting is expected to be a major event in the dairy industry, and it is likely to have a significant impact on the future of college dairy programs. It is hoped that the meeting will help to ensure that the dairy industry remains strong and vibrant for years to come.

WILLIAM B. WILSON, Western Illinois University, Macomb

Women Should Learn To Talk Farm Bureau

by Mrs. W. R. Mullan, President, Women's Section

"During the past few months it has been most evident that the Farm Bureau women of many counties in the state have been far more active in their organizations and have taken a far greater interest than ever before. This is a healthy trend that we must encourage and support. Furthermore, we are familiar with its history and can strengthen ourselves and hasten committee and making everyone glad.

"Women have been the maens of again, we find women serving on ad­
counsel with us as to means of
farm women towards our organiza­
tion.
