SECY WINDER EXPLAINS NATION-WIDE CORPORATION TO JACKSON COUNTY FARMERS
Will Ask U. S. To Protect States By Making State Income Levies Deductible From U. S. Tax; Says Farmers Must Work With Other Groups For Tax Relief.

Jackson—Unfolding for the first time the details of a nationwide income tax campaign which he said was first suggested by the Michigan Farm Bureau one year ago and has since been adopted by the Farmers Union, the agricultural organizations of the states and by the American Farm Bureau, Sec. Winder, of the Michigan Farm Bureau, on April 8 talked to an audience of southern Michigan farmers here that "the American Farm Bureau is calling upon the Senate, the House of Representatives, and the United States to make one joint conference to consider the whole question of a realisation of taxing powers between the various governmental units so that justice will be done to all classes."

"About one year ago," Sec. Winder said, "tax specialists from all State Farm Bureaus gathered at Chicago and went on a three-week hearing before the various Federal and State taxing organizations of the States in the levy of income taxes, by making the State income tax a legal deduction from the amount of Federal tax due. The argument was laid before your Michigan representatives, Clark L. Broady, secretary, supervisor of the Michigan Farm Bureau, and R. Wayne New­ton, assistant director of the bureau.

"The American Farm Bureau is squarely behind this progressive tax program—one that will not merely lead to the collection of more Federal income taxes, but will make it possible by a shift from the general property tax to the income tax the chief means of support for State and local governmental functions. It is one of the reasons why the Farm Bureau is fighting for the rejection of the post-war debt and the renunciation of the reign of cut-throat competition between states, which to-day stands as a barrier to taxation ability to pay any taxes.

"In recent years the Federal Government has been constantly encroaching upon the field of direct taxation, forcing the States to adopt indirect taxes. The revenues, should have a large measure of the right to direct taxation, and the United States should develop the indirect taxes which are particularly advantageous to the Federal government."
Editorials

TAX AUTHORITIES SUPPORT OUR POSITION

Secretary Gardner's emphatic position before national legislative committees, that there is no income tax on their own account. The statement was promptly endorsed by R. C. Norwood, the state which fails to recognize this inevitable working on an economic law will be left behind.

DOESN'T HELP THE PRICE OF BUTTER

April and May are the high months for marketing, and the methods of marketing and selling butter should be carefully considered. A. W. L. Sanilac County.

Why Tariff Making Is Slow

When I recently asked some farmers to sell me 18 and 11 more pounds in a period of 44 days, I was told that the task was impossible. A mere verbal promise will not make the man liable. If they do not open a new building, but the new building is still there, and the old one is not, there may be a contract.

Start Poison Plot Against Fruit Flies

Farmers are urged to use moist sand bedding and hang bags of ice in the stocks arriving at the Detroit Stock Yards, says the Michigan Livestock Seed Association. It is understood that this service is purely for loss prevention.

Why Tariff Making Is Slow

April and May are the high months for marketing, and the methods of marketing and selling butter should be carefully considered. A. W. L. Sanilac County.
Se'y Winder Speaks

To Jackson Meeting

(Mailed from page 1)

FEDERAL FARM

Secretary Winder appealed to the public for a wholehearted support of the Agricultural Marketing Act, and told his friends that Farm Bureau members owe it to their fellow citizens to 'keep the value of their farm products up' and to protect the marketing service.

'That is what the act does,' he said. 'It helps to keep farmers and merchants honest, and allows them to trade with the confidence that they are getting and paying for the fair price of a product. The act is a real benefit to all people of the United States. It is a real benefit to all farmers, but it is especially true that the act is a benefit to farmers who are able to market their products through the cooperative marketing organizations. It is a benefit to all farmers, but it is especially true that the act is a benefit to farmers who are able to market their products through the cooperative marketing organizations. It is a benefit to all farmers, but it is especially true that the act is a benefit to farmers who are able to market their products through the cooperative marketing organizations. It is a benefit to all farmers, but it is especially true that the act is a benefit to farmers who are able to market their products through the cooperative marketing organizations.'

Winder urged all farmers not to be 'overly critical, as if the act were perfect,' but to utilize the opportunities provided by the act to raise prices and make profits.

"Increase alfalfa, clover, corn, barley, and sugar beet acreages only," warns Michigan State College for 1930.

This year, too, is economically so necessary, DON'T EXPERIMENT!

Save your seed and labor investment by using FARM BUREAU BRAND SEED.

Keep production costs down.

A lighter seeding with Farm Bureau Brand Seed is much more economical than a heavy one with seed of unknown adaptability, or that has not been cleaned properly.

Farm Bureau Brand Seeds are selected from adapted origins, and have been proven by thousands of Michigan acres to be winter-hardy, of high purity, germination, and vitality.

FARM BUREAU FERTILIZER

Helped Them to Record Results

L. M. Vogler of Hope, Ind., winner of the Grand Champion Corn award at the International Hay and Grain Show at Chicago for the best ten ears of corn, did it with Farm Bureau Brand Fertilizer.

Albert Kipper of Stephenson, Menominee county, last year produced 402 bushels of fine potatoes per acre, and Alphome Verin of Mechanicsville produced 365 bushels of potatoes per acre, to qualify for 1st and 2nd places in Michigan's 30 Bushel Potato Club. Their fertilizer was Farm Bureau Brand.

These are outstanding results, but thousands of other Michigan farmers using Farm Bureau Brand fertilizers are improving on their previous best records. It's easily explained:

Nothing but the very best fertilizers, Pen- Thornton and Petrol, are used in Farm Bureau Fertilizers. Nitrogen carriers that yield the widest amount of nitrogen. At the time when young plants need it most. Farm Bureau fertilizers follow closely recommendations of agricultural college authorities.

Farm Bureau fertilizers are extra dry and extra fine for easy running and easy regulating in all field application equipment.

Fertilizer is a profitable investment. Survey of 48,000 farmers showed that $1 invested in fertilizer returned them from $1.93 to $3.45 per pound on the investment.

This Tag tells it ALL

PERFORMANCE NEW FARM BUREAU IDEA

Effective This Year, Bureau Offers Special Checking System.

For the first time in the history of the seed trade in Michigan, Bureau farmers will be provided with a performance tag on their seed. While the state is the largest in the country, Michigan farmers have been known to view their seed purchases as a matter of necessity rather than a matter of choice. This new system is designed to change that perception.

The tag is a small, round label with a number on it. Each number corresponds to a specific lot of seed that has been analyzed by the Bureau's Seed Analyst. The number is recorded in the Bureau's records, and farmers can check to see if their seed matches the expected criteria.

Benefits of the system include:

1. Increased confidence in seed quality.
2. Reduced risk of crop failures due to poor seed.
3. Opportunity for farmers to compare seed performance from year to year.
4. Encouragement of higher standards among seed producers.

The system is expected to take time to implement fully, but farmers are encouraged to participate in order to benefit from improved seed quality and performance.

COUNTY FARM BUREAU MEETINGS

The Farm Bureau is proud to announce the opening of our new headquarters building in Lansing. The building was dedicated on April 5th, with a ceremony attended by local farmers and representatives from the Farm Bureau. The new building will serve as a hub for local Farm Bureau activities, providing a space for meetings, workshops, and other events.

The Farm Bureau encourages all members to attend the dedication ceremony and tour the new facility. It is a proud moment for our organization, and we look forward to serving the community for years to come.

PRICES FAVOR MORE LEGUME HAYS IN 1930

College Explores Hay Situation In Crop Outlook For 1930.

In its Annual Outlook for 1930, published in the Michigan Bureau's Crop Outlook, the college's economists noted a shift in hay prices. They found that hay prices for legume hays, such as alfalfa and clover, were higher than for grass hays. This shift was attributed to increased demand for legume hays, which are known for their nutritional benefits.

The economists recommended that farmers consider planting more legume hays, as they provide a higher return on investment. They also advised that farmers monitor market trends closely to take advantage of this shift in demand.

LOCAL DEALERS

Raise Your Chickens To Maturity

First, they are more abundant and can be purchased at a lower price. If you are looking for a source of protein, chicken is an excellent choice. The average price of chicken per pound is around 2.50 dollars, making it a more affordable option than other meats.

Second, chicken is a versatile food. It can be prepared in many different ways, such as fried, roasted, grilled, or in soups and stews. This makes it a popular choice for families looking for a variety of meal options.

Finally, chicken is a low-calorie, high-protein food. It is a great option for those watching their weight or looking for a protein-rich meal. The average calorie content of chicken is around 260 calories per 100g.

Bigger, Healthier Chickens

Michigan Bigger, Healthier Chickens are the perfect choice for your next meal. They are fresh, delicious, and provide a high return on investment. Visit your local Farm Bureau office to learn more about Michigan Bigger, Healthier Chickens.

INCREASE YOUR CROPS

Corn, Beans, Clover and Alfalfa

For the increased production of corn, beans, clover and alfalfa, the Michigan Bureau has developed a new nurse crop which can be used to improve soil fertility and increase crop yields. The nurse crop is a small, fast-growing plant that can be planted in the spring and harvested in the fall. It is a great way to improve soil health and increase the yield of your crops.

Our bureau has developed several varieties of nurse crops that are specifically designed to improve the health of your soil. To learn more about our nurse crop varieties, visit our office or visit our website.

Insect Sing of Love and War

Cricket Are VErtileoptilus; Have Perfectly Timed Orchestra

Like the troubadour's sweet, measured song of love and war, the cricket's perfect timeliness is exquisite. The note which he sings is a chirp, not a trill. It is a trill, not a chirp, that we hear in the season when the crickets are making their noisy, tuneful music. The chirp of the cricket is, in its essence, a trill, but one that is so beautifully harmonized that it is almost impossible to distinguish the trill from the chirp. The cricket's song is a trill, but one that is so perfectly tuned that it is almost impossible to tell whether it is a chirp or a trill.

The cricket's song is a trill, but one that is so perfectly tuned that it is almost impossible to tell whether it is a chirp or a trill.
