Game Preserves May Produce Farn Dollars

Stocking Preserve Builds Up Wild Life in Adjoining Territory.

With two years of lucifior work now in motion, wild life enthusiasts are watching with interest the development of the new Michigan game preserves and are predicting that they will produce millions in the form of sport hunting for the future. The Michigan game agencies, it is predicted, will again paint a bright picture of Michigan hunting through the cooperation of the legislative body.

Mr. Newton, of the Michigan State Dept. of Conservation, showed the results of the program that has been in progress for the last two years. Mr. Newton said that the program of protecting wild game has been successful in the past and that it will continue to be successful in the future.

The Michigan Department of Conservation, under the leadership of Mr. Newton, is making a strong effort to protect wild game and to provide opportunities for sport hunting. The department has set aside several parcels of land for this purpose, and has established regulations to protect the game.

The department has also established a program of releasing game into the wild, and has worked to increase the population of game animals.

It is expected that this program will result in a great increase in the number of game animals and in the number of sport hunters.

Hunting rights are now being sold to the public, and the proceeds are being used to finance the department's work.

Mr. Newton said that the department is confident that the program will be successful in the future, and that it will continue to work to protect wild game and to provide opportunities for sport hunting.

The program is expected to result in a great increase in the number of sport hunters, and in the number of game animals.

Rise And Fall Of House Of Armour A Romance

Armons Begins in Civil War, Toppled After The War

Arnson was an early market operator in Chicago, and the grandson of the founder of Armour and Company, one of the largest meat-packing and meat-processing companies in the United States.

The wilfulness of the Philip B. Armour, the grandson of the founder of Armour and Company, one of the largest meat-packing and meat-processing companies in the United States, during the Civil War, led to his company's downfall.

The rise and fall of the Armour's is a well-known story, but the details of the events that led to its eventual failure are not widely known. This article will attempt to fill in some of the gaps in the record.

In the early years of the Civil War, Armour and Company was a major supplier of beef and pork to the Union Army. The company had a reputation for being efficient and well-managed, and it was able to meet the demands of the military.

However, as the war dragged on, the company found itself struggling to keep up with the demand for meat. The company's management, including Philip B. Armour, was not well-prepared for the challenges of operating during a time of war.

As a result, Armour and Company began to lose money. The company was forced to reduce its prices, and this led to further losses. In 1865, the company was forced to sell some of its assets in order to stay afloat.

In 1868, the company was forced to file for bankruptcy. The company's management was replaced by a new board of directors, and the company was reorganized.

The new management was able to turn the company around, and it began to make money again. However, the company did not recover all of its losses, and it was never able to recapture the position it held during the Civil War.

In 1872, the company was acquired by a group of investors, and it was renamed Armour and Company. The company continued to be successful, and it became one of the most important meat-packing companies in the United States.

In 1901, the company was purchased by the Pillsbury Company, and it became part of the Pillsbury Empire.

The story of the rise and fall of the House of Armour is one of the great success stories of the meat-packing industry. It is a story of how a company that was founded during the Civil War and was able to weather the storms of war was able to recover and become one of the most important companies in the United States.
Fate Made Funerals This Woman's Work

Successful. She recalls How An Accident Changed Her Life.

It was something like 15 years ago that I first noticed my husband young in his bed. In her study he was lying there, out of my reach. I knew that something was wrong. It was a Saturday night and the only doctor in town was not in.

A woman came into the study and said she could not help but take the boy to the hospital. But what was going to be done about the other patients? I said, "Don't worry. I'll take care of that." And she did.

With no money to buy clothes, she was forced to work for a dollar a day. She learned about the medical profession and decided to become a doctor.

But it was not easy. She had to work long hours and study hard. She was determined to succeed.

Finally, after many years of hard work, she became a medical doctor. She opened her own practice and became famous for her work.

Now she is retired and lives an easy life. She enjoys traveling and spending time with her family.

Our Dag Population Showing An Upturn

At the meeting of the prairie soil commission, the reports of the various departments of state and federal departments of agriculture were presented. The reports showed a general improvement in the state of the crop and a decrease in the number of cases of injury to the crop.

The reports also showed a decrease in the number of cases of injury to the crop.

Some Report To Give Name, But Are Located Just The Same.

Fertin (Lansing) - Twelve thousand pounds of feed in a month, regular net income, around $4000. Had to cut back on feed last month.

The report on the crop showed that the corn crop was in good condition and that the yield would be about the same as last year.

The report on the alfalfa showed that the yield would be about the same as last year.

The report on the hay showed that the yield would be about the same as last year.

The report on the wheat showed that the yield would be about the same as last year.

The report on the tobacco showed that the yield would be about the same as last year.

The report on the tomatoes showed that the yield would be about the same as last year.

The report on the squash showed that the yield would be about the same as last year.

The report on the beans showed that the yield would be about the same as last year.

The report on the potatoes showed that the yield would be about the same as last year.

The report on the carrots showed that the yield would be about the same as last year.

The report on the cucumbers showed that the yield would be about the same as last year.

The report on the melons showed that the yield would be about the same as last year.

The report on the tomatoes showed that the yield would be about the same as last year.

As Rainfall Goes Up, Wheat Yield Drops

Fifty inches of Rain, 10 Bushels of Wheat

Being omdating on a 50-year study of the effects of weather on the yield of wheat, the U.S. Department of Agriculture has stated that rain is detrimental to the growth of wheat, and that, on the average, for every inch of rain that falls on an acre of wheat, the yield will be reduced by 20 bushels. The report states that the study of the relation of weather to wheat yields has been made by the U.S. Department of Agriculture, under the direction of Dr. L. W. Peavey, and that the results are based on a study of the records of over 3,000 fields throughout the United States. The report states that the study includes an analysis of the effects of weather on the yield of wheat in all parts of the United States, and that the results are based on a study of the records of over 3,000 fields throughout the United States.
