U. S. Will Be Tropical But Not In Our Time

Michigan Professor Explains Slowly Disappearing Glacier

An Ardis Shisler of the University of Michigan who has been studying the ice in the north for many years, states that the great glaciers which once covered a large part of the earth’s surface have disappeared more quickly than was expected. He has found that the ice of the glaciers is not formed in the same way as the ice of the polar regions.

The glaciers have been shrinking for the past 800 years, and are now only about 500 miles wide. They are still moving at a rate of about 2 miles a year, but they are not as thick as they were before. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

The glaciers are now melting at a rate of about 20 feet a year, but they are still moving forward at a rate of about 2 miles a year. The ice is now only about 200 feet thick, while it was once 3,000 feet thick.

Want General 10 Per Cent Freight Rate Increase

A general 10 per cent increase in freight rates is proposed by the United States Railroad Commission, and it is estimated to add $410,000,000 to railroad income, which will be handed over to the government. The increase is expected to be implemented as of July 1, 1932.

Early in May twenty powerful railroad officials, the Advisory Committee of the National Association of Railroad Executives, meeting at Chicago to discuss matters, decided that an emergency exists in railroad revenues.

They argued that rail earnings have dwindled so as to endanger the billion dollars in railroad bonds held by insurance companies and banks; that interest rates cannot be reduced; that taxes are a fixed charge; that supplies and equipment costs have increased, and that nothing but increased revenues will prevent a deep cut.

Railroad officials will remember that during the 1920 depression the railroads were granted a blanket 40 per cent increase. But later decreases made the reduction of the rate unprofitable. The new rates would help break that stamp, and an increase would now do the same thing. They claim that during the past 11 years the I. C. C. has made three revenue rate increases on the rails and the 1920 competition has cut away most of the benefits of the 1920 increase.

The industries are agreed to launch a united drive to reduce the high railroad rates.c

A Debt Worth Shifting Onto Us

In his address to the members of the National Committee of Twenty, Governor Herbert Hoover said:

"We must now turn our attention to the debt problem. It is a debt to which we are all responsible. It is not a debt that can be shifted to others, but a debt that we must bear together."

Silas Strawn and Melvin Traylor, Chicago bankers, were present at the conference and said that the U. S. expectation is that Europe will pay part of its remaining debt and that Europe's debt should be reduced.

"The great nations of Europe," they said, "must decide whether they will continue to pay for their war debt or whether they will accept a reduction in the amount."

"The attitude of the United States is clear," they added. "We cannot afford to pay for Europe's war debt. The burden must be shared by all nations."
CO-OPS HANDLE 83 MILLION IN FARM INCOME IN MICH.

College Believes Every Other Farmer Afflueub.

Some Co-op.

Leads-Michigan plans to see a record breaking season in its co-operative activities this year, according to a report from the state cooperative division. The report states that the co-operatives are expected to handle more than 83 million dollars in farm income this year.

Home Accidents Take 30,000 Lives In Year

In the United States last year claimed 30,000 lives in the 50 mild and caused over 1,400,000 injuries. The report states that these injuries were caused by various means, including falls, burns, and electric shocks.

This service is important to all those who use the Michigan Public Utilities Commission for a communication with the government for the purpose of investigating the traffic division.

Utilities Commn' Should Regulate Price For Milk

In Opinion of Commissioner of Agriculture In Michigan

Lansing-George P. Powell, state commissioner of agriculture, has issued a report in which he states that the state of Michigan should regulate the price for milk. The report states that the issue of milk is a public necessity and the state should take action to ensure that the price does not become too high.

LOW PRICE GRAINS RECOMMENDED TO AID POOR PASTURE

Wheat and Oats Feeding Plan
Offered by State College

Fuel experts in a number of states recommend that grain prices are reasonably suggested for use in Michigan, farmers who have been experienced with short-time months in the state Department at Michigan. These prices are expected to remain stable with the cold and winter season, with a price of 20 to 30 cents per bushel.

Wheat and oats have good grain quality, and the farmer who has been expedited with heavy shares and a large share of growing corn should be expected to remain steady through the winter months. Some of the grower's best qualities will be expected to be strong for winter months.

Michigan Represented
At National Meet

President E. J. J. Enright presented the Michigan Dairy Farmers' Association at the National Dairy Farmer's Association in New York. The meeting of the national farmers' association was held on the north side of the state where the farmers from the state and the country have been expected to attend.

Don't Worry About It

The key to better profits is hard work, dedication, and a positive attitude. It's important to focus on the big picture and not get caught up in the small details.

CONDITION

Good Performance Comes from Good Fertilizer

A. Yates, E. Dickinson county, well-recognized, is offered for the Michigan 4-H Club and 4-H Camps of 1928, with results of 100 lbs. of nitrogen and 200 lbs. of phosphorus per acre. Of course, Farm Bureau Fertilizer was used in both experiments.

The Four Major Fertilizers in good production records—urea, super, superphosphate, and muriate of potash, are the ones which the bureau recommends. The Farm Bureau club is working on an average of the same per acre in the new. The average acres of Farm Bureau club was 350 lbs. of nitrogen per acre, with average analysis of 1-15-5. The lowest fertilizer was 400 lbs. of nitrogen per acre, and 15-15-15.

Reo Offers New 1 1/2 Ton Truck at Low Price

By file end of May it expects to have 750 new Reo trucks available. Thirty-eight Reo models, at $950,000 each, are expected to be sold in the last few weeks.

Longworth's Large Estate

The estate of the late Speaker Longworth, will include the strawberry farm near Russellville, Ky., and a large greenhouse in which are grown hundreds of different kinds of fruits. The greenhouse will be sold at auction by the court, and the proceeds will be applied towards the payment of the estate.

Mcisco and Bureau Penn Oils are not refinery by-products, but are made from these materials. In the production of gasoline some refiners make lubricating oil of the residue. Farm Bureau Penn Oils are made from the residues with the finished product in mind. That is the reason our Oils prevent wear and friction when other oils fail.

Then, too, the Long process reduces the refining gas to a quality so that our oils are free from volatile and carbon deposits. This makes it possible to freeze for longer periods of hard driving.

A-Good-Advised 1 1/2 Ton Truck for the family.
