Friday, Nov. 13, will be opened with a business session at 10 a.m. The business sessions will be followed by luncheon and entertainment.

Trade expositions will be held Thursday, Nov. 12, and Friday, Nov. 13.

MILK COMMISSION TOLD MICHIGAN SHOULD THINK LONG BEFORE JUNKING BASE AND SUPERFLUS FOR LEAGUE PLAN

Would Need $10,000,000 Investment In Detroit Area; Commissioners Visit League; Endorse Payment For Milk According To Uses; Detroit Creamery Offers Support

Lansing—Gov. Brucker's Commission of inquiry into the cost of producing and delivering milk, concluded its hearings here September 30. It found in the closing hour a verbal report of much importance from Commissioners Woodworth and Hedrich on the New York Dairymen's League plan and its practical operations, with applications of Michigan conditions.

The commission laid over its final 16 hours at Detroit testimony giving focused attention on the remarkable record of the Dairymen's League. The question was raised as to whether the League plan in whole or in part might not be used in Michigan.

The commission sent two investigators.

"The point at issue," declared Commissioner Woodworth, "is: Shall we junk the base and surplus pool system for a pooling plan?"

"After seeing the New York system, we think Michigan can do much better under a pooling plan than under a pool-base surplus system. New York is making a go of it; Cleveland tried it and is in bankruptcy. It would cost about $10,000,000 to fit the Detroit system, and the subject is too complicated and hazardous of all business. New York is no milk Utopia. Believe me, they have their battles. The lesson we get in New York is that wherever the farmer puts up the money to process the surplus."

Mr. Woodworth's statement was endorsed by Commissioner Hedrick, who the FARM NEWS said had been making investigations into the dairy and dairy marketing systems.
TWO plans was carried to a successful and profitable conclusion by the county. He is interested in improving field crops, and dairying is the one string to his bow, whereas in Michigan dairy cows are milked for the Department of Agriculture. Michigan's crop is a statesman's head to his back—just as Michigan but about 21 lbs. daily as compared with the average for cows that only a little better than 20 pounds of milk a day. New Mexico's milk and sent all of it in. Naturally Mr. McBride observed that New Mexico's milk is produced under the Act of March 3, 1879. The Deeatur wet muck fields accumulated and stored in the logical prize. The 1932 plan recognizes that suggestion. In-

Reapportionment Back Again

Between 1911 and 1923, several leading agricultural leaders worked on a reorganization of the State Agricultural College and the Department of Agriculture. This reorganization was to include the creation of a new state agency entitled the 'State Agricultural College and Department of Agriculture.' The proposed reorganization was approved by the Michigan State Legislature in 1913, and the new agency was created by an act of the Legislature on March 8, 1914. The reorganization created a new state agency entitled the 'State Agricultural College and Department of Agriculture,' which was to be responsible for the supervision and administration of the State Agricultural College and the Department of Agriculture.

Take Second Thought

Dear Miss Edith M. Wagar,

Here is a letter from a man at home who wishes to come back to the city. He is a very fine fellow, but we think it would be better for him to stay at home for the time being.

Sincerely yours,

[Signature]

Method for Canning Fowls

1. Clean the fowls thoroughly.
2. Place them in a pot with water.
3. Bring to a boil.
4. Boil for 15 minutes.
5. Remove from heat.

What this country needed was a good Five Cent Nickel

And as far as food is concerned, we've succeeded in filling the need. It used to cost so much to get food, yet it was raised to where it was eaten that the best part of every nickel went—not to pay for the food—but to pay many profits and many mending charges on the hand.

We don't buy our food from somebody, who bought it from somebody else—and so forth—with a profit added each time it changes hands. We go for direct to the man who produces it, and we sell it to you at a single profit.

And so you get the best food in an A & P store at a low price. For nearly all of the money you spend in our stores goes to pay for food, and a very small part of it goes to profits and expenses.

COLLEGE TELLS
Much Damage Being Caused
By Insects This Year

East Lansing—Grain weevils are giving a lot of trouble this season, according to the entomology department of Michigan State College. The insects can be controlled, the department said, if farmers will cooperate with recommendations for the protection of their crops. The weevils can be controlled with carbon dioxide gas, an efficient but expensive fumigant and explain the need for cooperation.

Minutes
Before the bug is placed in the granary, the bin should be thoroughly cleaned and made as tight as possible. Sweep the bin with a broom and wash the walls and floor with a soap and water solution, where these are to be washed, and that are sent to escape and make new weevils.

Every precaution should be taken to prevent the introduction of dust. The bin, when cleaned, should be tightly closed and locked.

Large grist can be obtained from manufacturers at a considerable saving to farmers. Many can afford to do this, always use the most modern facilities, and get the best of results. They are able to do this because of the large number of customers they have that are satisfied with their work. The saving is in the use of the best of machinery and the best of labor.

No one wants to lose money, but it is a fact that money is saved by the use of the best of machinery and the best of labor. The saving is in the use of the best of machinery and the best of labor.

Two good Holstein bulls, 8 months.
