First Transcontinental Wire A Neglected Agriculture
Preceded Rails Through Buf-
falo, Indian Country 70 Years Ago
It was 70 years ago, March 10, 1830, that the first wire was strung between the Pacific and Atlantic shores of this continent. The year 1830 is memorable in the history of the world for other reasons, but in the annals of radio and wire communication it is notable for the inauguration of an age of intercommunication between the two hemispheres of the globe.

In the year 1830, the first wire was strung across the Atlantic Ocean, from Ireland to the United States. This wire was the forerunner of the modern telegraph system, and the transcontinental line is but a continuation of that first wire.

The wire was strung from the west coast of the United States to the east coast, and was used for the transmission of messages across the continent.

The wire was strung by a group of enterprising men who were known as the "Atlantic and Pacific Telegraph Company." They were inspired by the idea of creating a network of communication that would span the entire continent.

The wire was strung over a distance of 3,000 miles, and was completed in 1851.

The first message sent over the wire was a message from President Millard Fillmore to President James Buchanan.

The message read: "I have the honor to inform you that the wires are now connected and that the first message has been transmitted.

I am, Sir, your obedient servant,

Millard Fillmore, President of the United States.

James Buchanan, President of the United States.

The message was transmitted on the night of April 18, 1851, and was received on the other end the next morning.

Group or Branch Banking in Michigan

There has been much said in this country about group or branch banking, and over the past ten years tremendous strides have been made in this direction. Many banks throughout the country have entered the field of group banking, and have developed branches in other cities.

Mr. Hart Would Wring Competition's Neck

Congressional action will put the banks on a level basis, and larger and larger banks will result. Large banks are better able to weather modern emergencies because they are usually stronger financially and have a better record.

The Refrained Try to Weeke

Congress and the people of the United States will be further assisted in returning to prosperity by the action of the Federal Reserve Board in curtailing the issue of national currency and deposits. The Board has taken action to make the banks conform to the law as amended by the recent act of Congress.

A Certain Mortgage Lifter

The United States loaned hundreds of millions to the Bank of England through the War Loan Fund, but we are vulnerable to such demands for gold until next July to meet our obligations.

Lager Promises Farmers Brown a Big Meeting

The United States loaned hundreds of millions to the Bank of England through the War Loan Fund, but we are vulnerable to such demands for gold until next July to meet our obligations.

Slippery Days Are Near Again

Maybe you have paid a repair bill caused by a slipped piece of road. You don't have to carry that risk any longer. The chance is greater cycle unless you ride alone. And when the wind is blowing you can't always keep your balance. You can ride this winter with added safety from the wind with a slipper sled. The wind will be kept away and you'll look and feel like a champion. It's a slipper sled, and it's a safety sled too. It's a slipper sled of the new type, and it's a safety sled of the new type.
A Canner's Paradise

I have often heard the saying, "A bird in the hand is worth two in the bush." This saying is especially true when it comes to canning. Canning is a process that allows us to preserve food, ensuring that we can enjoy fresh produce year-round. It is a traditional method of food preservation that is still widely practiced today. Canning involves placing food in airtight containers and heating them to high temperatures, which kills bacteria and prevents spoilage. This allows us to keep our food fresh for months, even years, without the need for refrigeration. Canning has been a part of our culture for generations, and it is a skill that is as relevant today as it was 100 years ago.

Congress to Act on Farm Loans

Land Banks to Get More Capital; Farmers May Get Extension

The Congress will consider the final bills including the General Authority for Farm Loans, which would authorize the banks to extend loans to farmers at lower rates of interest and for longer terms. This would provide much-needed capital for farmers to purchase equipment and expand their operations. The banks would also have the authority to purchase and sell farm products, which would help to stabilize prices and ensure a steady market for their crops.

Have You Ever Tried These Ideas?

Cooking Suggestions For Cabbage, Onions and Celery

We can do it again.

Our part, as we see it, is to keep on selling and expanding the products to can.

You Can Guarantee A Modest Fortune

A very reasonable annual or semi-annual life insurance payment will create for you and your family a:

1. A growing, safe savings account.
2. A growing life savings account.
3. A growing business or family cash reserve, backed by full insurance protection.
4. A personal and family future made safe by life insurance.

Life insurance is not afforded by depressions. It always pays 100 cents on the dollar on demand. No legal reserve life insurance company has failed in the past 30 years.

URGE REVIVAL OF WAR FINANCE PLAN TO AID BUSINESS

War Finance Corporation's Work Resumed

Washington — President Hoover has apparently decided to resume a Reconstruction Finance Corporation now existing in the United States. It was announced here today that the Reconstruction Finance Corporation advanced $23,711,000 for new loans on $24,615,000 in old stock to banks and insurance companies.

The Reconstruction Finance Corporation had $329,721,000 in assets in 1923, and the addition of the new loans makes it one of the most active of the Reconstruction Finance Corporations. It is expected that the new loans will be used to meet the needs of the business community.

The new loans are expected to be used primarily for the purpose of meeting the needs of the business community. It is expected that the new loans will be used primarily for the purpose of meeting the needs of the business community.
