BUSHEL CERTIFIED MICHIGAN ALFALFA 8-6 ACRES

**Dexter Describes Quality and Purity Sought by Crop Improvement Agency**

By R. E. DEXTER

Extension Professor, Farm Crops Department

The season of 1931 was designated by the Crop Improvement Agency as a "show" season to indicate that in the coming year the acreage of alfalfa seeded was going to be an indication of the response of farmers to the quality of alfalfa seed grown in the state. The seedling plants produced were grown under the watchful eyes of the agency, and the names of those who have grown and marketed the seed are on file with the agency.

The first step in the procedure of selecting seed was to select the original variety. This was followed by the selection of the parents. The agency did this by making a test of about 1,000 seedlings grown under the same conditions as those in the field. The selection of the parents was then made from these seedlings. This was followed by the selection of the seedlings grown from the selected parents, and the process was continued until the seed was selected for the variety.

**No Alfalfa Overproduction Here, Prof. Anthony Says**

Acres for Hay, 1 for Pasture Per Dairy Cow Only Hel Reskild

By HERBERT L. ANTHONY

Professor of Agronomy, Michigan State College

More than 68,000 acres of alfalfa hay may be grown in 1932 without overproduction of alfalfa hay, according to a report of the Crop Improvement Agency. This report is based on a survey of the acreage of alfalfa hay grown in 1931, and it shows that the limiting factors in the production of alfalfa hay are the availability of labor and the cost of labor.

The Crop Improvement Agency is a state-wide organization with headquarters in East Lansing. It is a cooperative venture between the University of Michigan, the State College of Agriculture, and the Department of Agriculture. The agency is financed by contributions from the state, the county, and the farmers. The agency is charged with the responsibility of selecting and certifying the best varieties of alfalfa seed for the state. The agency is also responsible for the distribution of the certified seed to the farmers.

**Four Hours Later**

"Fire" April 28 about 3 a.m. I lived it through myself. The first fire that I ever had was when I was six years old. The fire was in the kitchen, and I was making bread. I had lit the oven and put the bread in the oven, and I had forgotten to put the lid on. The fire was so hot that the bread jumped out of the oven and burned the house down.

I was seven when the fire started, and I was nine when it was over. The house was a total loss, and we had to rebuild it. We had no insurance, and we had to pay for the rebuilding ourselves. The fire was so hot that it even melted the metal roof of the house.

I have lived through many fires since then, and I have learned how to prevent them. I have always been careful to put the lid on the oven when I bake bread, and I have always been careful to put the lid on the oven when I cook anything.

I have lived through many fires since then, and I have learned how to prevent them. I have always been careful to put the lid on the oven when I bake bread, and I have always been careful to put the lid on the oven when I cook anything.

HE GAVE THE WORMS
A Meal Of Arsenic

A farmer received a telephone call from the government agricultural agent advising him that it was the proper time for spraying apple trees. The farmer followed the advice, and had a price crop of apples.

A few miles away was an apple Grower who did not have a telephone. He failed to receive word from the government man, and his crop was below average.

A telephone is a daily help to the farmer. With it, he can call neighbors and friends readily; obtain market prices for produce and livestock, and, when emergencies occur, summon aid immediately.

The telephone is worth more than it costs.
