# **NEW ORDER BRINGS FARM ELECTRIC** LINES TO CONSUMERS POWER AREAS WITH LESS THAN 5 FARMS PER MILE

Recommendations by the Michigan State College Seek to Provide Any Number of Farms Per Mile With Electric Service On Equally Favorable Terms

Michigan farm communities averaging less than five farmers per mile of road are assured farm power lines in Consumers Power territory on favorable terms, in accordance with an order issued by the Michigan Public Utilities Commission December 31.

Acting upon recommendations of the Michigan State College, the utilities commission ordered the Consumers to revise its present "optional" plan of constructing rural electric extensions on the basis of \$1,000 per mile, less \$100 credit for each farm customer.

From now on, said the commission, that plan is \$500 per mile construction charge, less \$100 for each farm customer connected, or the equivalent, and will include a guaranteed minimum monthly revenue of \$12.50 per mile of extension.

## **Two Plans Brought Together**

Thus the Michigan Plan providing a free line for an average of five or more customers per mile in return for the \$12.50 monthly minimum revenue, and the old \$1,000 per mile construction charge plan with no guarantee, have been brought together in such a way that any number of farm customers per mile can get service on equal terms by application of the new order, according to the commission. The order also reduces the guarantee period from five to three years, and is retroactive to all lines built under the Michigan Plan since January 1, 1936.

Savings to thousands of potential rural electric customers in the 48 counties served by Consumers are seen in the order, which permits extension of service into areas averaging less than five farms per mile at greatly reduced cost to the prospective customers. Under the \$1,000 a Mile Plan, the payment required of four customers was \$600. On the basis of \$500 per mile, the payment from four customers will total \$100 with an average monthly minimum payment of \$3.13 per customer, on the basis of 4 per mile. According to the commission, the difference of \$400 will pay a minimum monthly bill of \$12.50 per mile for 3,3 years for four customers.

## The New Electrification Order

The December 31, 1936 order of the Michigan Public Utilities Commission upon the Consumers Power Company makes it possible for any farm community in that company's territory to secure electric service on favorable terms. Heretofore, that company's most favorable terms have been limited by commission order to groups averaging five or more farm customers per mile. The new order applies much the same terms to any group having less than an average of five customers per mile.

It is recognized that the capital cost for poles, line and construction is heavier for each of two, three, or four customers per mile than it is for five. Transformer and house connection per customer is a comparatively small item. The new order fixes it so that any number of customers per mile can get a line, even though others along the road are not interested now. Later, should they come on, the original customers will be reimbursed at the rate of \$100 per additional customer until the average of five per mile is reached, and the original customers no longer have any line investment. At the same time their monthly minimum bill is reduced toward the rate of five per mile. The new order also reduces the guarantee period from five to three years.

The new order is indeed a stimulating beginning for the 1937 program of rural electrification in Michigan. Two principal companies, the Detroit Edison and the Consumers Power, have territories that include about three-fifths of rural lower Michigan. Their combined program is to bring electric service to 52,500 farms in 1936 and 1937. Their accomplishment in 1936 was not far from 20,000 farm connections. Now, the door has been opened to a complete program in 1937 and ensuing years.

### **Eighteen Short Days**

Yesterday, January 1, ended the eighteen days of minimum daylight that we experience each year. We have always thought that December 21, the beginning of winter, is the shortest day of the year. But the East Lansing weather bureau says that from December 13 to January 1, though the time of sunrise and sunset varies, we have exactly nine hours of daylight each day. On January 1 the amount of sunlight increases to nine and one-hundredth hours, as it was on December 12.

We have always thought that June 21, the beginning of summer, is the longest day of the year. According to the government station at East Lansing, from June 16 to June 26 we experience fifteen and fourtenths hours of daylight each day.

## They Can Go To High School

The Farm Bureau and the Grange stood for the Thacher-Saur Act to bring \$22,500,000 of state aid annually to local schools, including the payment of high school tuition for pupils from rural districts. Not only was a marked reduction in rural school taxes made certain, but it was predicted that the enrollment of rural students in high schools would be doubled within three years.

According to M. B. McPherson, chairman of the state tax commission, and a director of the Farm Bureau, rural high school attendance has almost doubled itself within two years. Most of the town and city high schools have been in position to take the large increase from rural districts without much difficulty. The Act has made it possible for many boys and girls to go on with their school education.

## **Unemployment Insurance For Farm Help?**

For the present, among the largest classes of people excluded by law from the unemployment insurance and old age pension provisions of the federal social security act are farm help and domestic help. However, we learn that they were included in the original bill, but were

## The Memory Quilt

It's needed doing quite a spell, but now I have it done I'd almost like to start again and put that binding on For it has caused me many a smile and also several sighs To work on this old crazy quilt, as you may well surmise.

Now see this piece of gingham here, with checks of white and blue. It's from a dress that Mabel wore when she was only two. Remember her, how cute she was? And then this yellow scrap is from an apron Mother had before she married Pap.

She liked bright colors, Mother did, this piece of green percale Is some she bought for me a waist, long years ago, by mail. She was a quilter in her time, and wanted I should be.

She treasured all such priceless bits, and passed them on to me

This piece is one Aunt Mabel wore. Her husband was a wretch, And so she had to stretch each cent as far as it could stretch. I well recall how pleased she was when Mother gave her this

Her weakness was for pretty things, just like our Mabel's is.

Then these two blocks my sisters pieced, Mary and Ruth, you know. They died when they were in their teens one winter long ago, So Mother saved the blocks for me, the first ones they had made,

And I should hate to lose them, too, though they are getting frayed These pieces came from Cinthy Hicks. I gave her some I had The winter when Clem broke his leg and she took on so bad. Seems like we used to neighbor then more than folks do today.

And this was old Aunt Emeline's. She always dressed in gray.

You know, I like this guilt so much I sometimes almost doubt If I should use it any more. It's bound to wear it out. But then I think I may as well, because I like it so,

For Mabel wouldn't value it-and no one else would know

The heart throbs and the memories these scraps of cloth comprise, and sometimes as I sewed today the tears stood in my eyes. It's needed doing quite a spell, but now I have it done I'd almost like to start again and put this binding on.

# **Royal Marriage**

By CHESTER H. ROWELL

Mr. Rowell, editor of the San Francisco Chronicle, addressed the American Farm Bureau Federation at Pasadena, Cal., in December on medical care for rural communities. His article on Royal Marriage appeared in the Chronicle,

THE TRADITION of royal intermarriage had reduced the monarchs of Europe, even before the war, to the social status of a village on the steppes of Russia or of an island in the South Seas, in which all the population are related through successive cross-marriages. The number of eligible princesses for each young prince was strictly limited, and nearly all of these were his cousins in the record-all these things will within a few degrees. It was a hig family or a small village, with

Except for two sources of supply, the institution would have bred itself out, a century ago. These were Queen Victoria's healthy progeny and the German princelings of which Victoria's consort unerringly and instantly blazoned was one. Victoria herself was literally bred for the throne. The dynasty of the decadent Georges had nearly run out and there was danger of its extinction. So her father, an unimportant Prince of Facing the house members, from the the House of Hanover, whose descendants, if he had any, would be north wall, will be two electric "score in line for the succession, was married, late in life and much against boards" which will blaze out the re his will, to a healthy Princess, eugenically selected, and Victoria was the product.

Victoria was a stodgy but virtuous person, sound in body, mind and character. She married one of the flock of German princelings who were then the most numerous eligibles. Germany was then not a national State or Empire, but a flock of independent States, ranging from the mighty Kingdom of Prussia and the Imperial House of Hapsburg down to "Thun und Taxis" and other petty principalities. But the head of each of these was an independent sovereign. His brothers and sisters, nephews and nieces, were eligible to marry into royal houses.

Thus these German families intermarried everywhere. And Queen Victoria not only had healthy and decent children, but she reigned long enough to marry them and her grandchildren, her nephews and nieces and their cousins and aunts, all over Europe. The Kaiser is her grandson. Queen Marie of Rumania is descended on one side from Victoria and on the other from the Czar Alexander. Her son, Carol, married (and deserted) Princess Helen of Greece, who was a Hohenzollern and so of the families both of the Kaiser put it has worked well and successful- and of Victoria. The deposed Queen of Spain was a grand-niece of Victoria. The Czarina was princess of a minor German house, For press row, the new machine So, by ancestry, was Queen Mary. Princess Juliana, of Holland, is will be a change. In the past, every marrying another German princeling, further to dilute the blood of important roll call meant a tense, pa- William of Orange. And so on, through the whole inbred tribe.

### One result was that the sovereigns of Europe were nearly all ortorial feet for the nearby press room foreigners by blood. The royal house of Greece was German, though its native language, always used in the family, was English. The Czar and Czarina spoke English to each other, though one was Farmers who want to establish punch out as many copies of any roll German and the other Russian. Another more serious result is biological. There are certain any mixture there are likely to be plants adapted to any soil condition be too apparent to be followed often. hereditary. Albinism or colorblindness do little harm, but hemo-hereditary. It is inherited by male children through mothers who do not themselves have it, from male ancestors who did. On a South Sea island, if there is one case of albinism, a few generations may bring many, through inbreeding. In a country like Europe or America, it breeds out, and the proportionate number of cases does not increase. It never happened to start in Europe's royalty. Hemophilia disappears even more rapidly, since boys born with it, in ordinary circumstances, are liable to bleed to death before they are simply wornout or unproductive past like a hurricane to be almost im- reach the age of parenthood. But when it once entered the royal

dropped when the U.S. Treasury pointed out the difficulty of collecting the monthly premiiums or taxes from them and their employers.

Now it has been made known that the Social Security Board at Washington will propose to the new Congress a voluntary government insurance system for these citizens. To be administered by the Board, it may accept premiums of \$1 per month and upwards, to provide certain unemployment insurance and old age pension benefits.

Employers and workers in factories and other establishments coming under the Act will find that every pay day becomes a statement of earnings and the distribution thereof. With his check or pay envelope, the employe will receive a statement of tax deductions for state unemployment, federal unemployment and federal old age pension funds. Employers, employee, state and federal governments are expected to keep track of these deductions. The United States Government will have about 26,000,000 employe accounts.

### Some Bills Are Cats and Dogs

With nearly half the membership of the Michigan legislature to change in January, there is good prospect that scores of proposals that have been rejected by previous legislatures will be presented for consideration again.

Speaker George A. Schroeder, to whose desk as chairman of the legislative council have come many of the measures old and new members have in mind, made this comment recently to the press:

"It looks as though they are going to drag out all the old cats and dogs and add a lot of new ones."

Past experience has taught us that regardless of a legislative council to sift worthless and unfair legislation from desirable proposals, that no matter what the council or any other body thinks of a bill, it is likely to find its way into legislative channels, and circumstances may bring about its enactment.

In recent years the Farm Bureau and the Grange and associated groups have sponsored important highway and school legislation that has brought much state aid for local roads and for local schools. These funds come from the gasoline and license plate taxes, and from the sales tax. Attempts have been made before to divert these monies to other uses. No doubt, other attempts will be made in the 1937 session. Look at your reduced road and school taxes and ask yourself if an organized agriculture isn't the best insurance you can have in such matters.

### Our Junior Live Stock Show

Seven annual 4-H Club Shows have been held at the Detroit Stock Yards. The last, in early December, had 110 calf entries, and 85 lamb entries for the several breeds of cattle and sheep. When the exhibitors and their friends sat down to a banquet and for the awarding of prizes, there were 600 of them!

Competition was keener than in any previous show, say those who followed the judging. No finer crowd of boys and girls could be found in any state. Those who won deserved to win, and were handsomely rewarded by the prices their stock brought. In fact, most of the sales were at good to fancy premiums. The runner-ups took it with a smile and an earnest determination to come back and win next year.

The show is sponsored by the Detroit Stock Yards Co., the Michigan Live Stock Exchange and other live stock commission firms at the yards, and the Michigan State Department of Agriculture. They finance it, and deserve our appreciation for a good investment in young people.

## PUBLIC RESPONDS **TO PROMOTION OF MICHIGAN SUGAR**

## 1936 Production Will be Sold in State; Crop Can be Expanded

Saginaw-According to Arthur A Schupp, executive secretary of the Farmers and Manufacturers Beet Sugar association. "During the past four years the demand for Michiganmade beet sugar has been steadily increasing. According to reports from sugar brokers, wholesalers and retail grocers throughout the state it is expected that practically all of the sugar produced in Michigan this year will be marketed within the state."

When asked to explain the reason for the increased demand for Michigan-made beet sugar, Mr. Schupp said, "The educational and advertising campaigns conducted by the Farmers and Manufacturers Beet Sugar association have sold the people on Michigan beet sugar. Through the co-operation of the press and the retail merchants the buying public are beginning to recognize the importance of the beet sugar industry to Michigan agriculture and labor. In addition, it is now an established fact that Michigan-made sugar is equal in every respect to the highest quality sugar produced anywhere in the world. All of these factors have operated to encourage homemakers and food manufacturers throughout grown sugar."

Referring to the possibility of in- Show banquet audience here recently creasing the production of Michigan- that his department would have made beet sugar in order to meet the recommendations to submit on the the counties on their future returns. to the annual convention of the Amdemand for the article, Mr. Schupp, subject at the next session. stated, "With the farmers of Michigan seeking to materially increase their need for revision of the McNitt townpurchasing power we feel confident ship road law act, the commissioner that they will make it possible for the said that "a number of counties, parbeet sugar companies to operate their ticularly those in northern Michigan, factories at capacity next year and have found that their payments under thus enable them to meet the demand this law are insufficient to meet their for Michigan-made beet sugar which maintenance burden occasioned by has been created during recent years. the absorption of township road mile-

By-products sales, in the case of cat tle and sheep, are usually large enough to pay expenses of preparing the animals for the retailer.

# THE MOST SUCCESSFUL FEEDS

Add natural sweetness to the many advantages of using dry skimmilk in your feed formulas. Green Valley Brand is natural, sweet, fresh milk, bought sweet and kept sweet until dried. Only fat and water are removed.

Your most valuable protein ingredient-yes; the outstanding source of Vitamin G, milk minerals and milk sugar (lactose)-each in itself meriting first choice for this leading milk product. The combination of ALL these valuable qualities in NATURAL form accounts for its wide use in the most successful feeds

Remember, too, dry skim milk is sold on grade. Use the best-and enough of it to insure real milk results. Green Valley Brand is choice grade and gives dependable results.

Lansing ansing DRY MILK SALES DIVISION

Though the choice cuts of meat are always in demand, some of the others are wanted hardly at all. In order to get rid of all cuts of meat equally well. retailers are compelled to maintain a wide range of prices on various cuts. Thus, while porterhouse steaks, or pork and lamb chops, may be selling for four or five times the cost per pound of the live animal, less desirable cuts may be priced at little more or less than the cost per pound of the live animal.

**Community Fire Departments** Many small-town fire departments in New York state, unsupported by taxation, raise money by putting on community dances, amateur plays, socials, suppers, and all kinds of home alent activities.

SURFACE

- The picture on the left shows a fully developed sugar beet just as it appears in your soil.
- When this main root is pulled thousands of little fibrous rootlets are left in the soil. These remaining rootlets average about a ton to an acre. When these little roots finally rot they deposit a rich humus in the lower strata of your soil.
- As they decompose, tiny channels or open spaces are left, permitting the entrance of air. All of which keeps your soil in excellent
- condition for succeeding crops. What is the best money crop you can produce? Sugar Beets!
- What makes intensive cultivation pay and destroys weeds and pests? Sugar Beets!
- What fits into a well balanced crop rotation system? Sugar Beets! What comes through best in bad weather? Sugar Beets!
- What is the ideal non-surplus crop? Sugar Beets! Today the thoughtful farmer is
- more enlightened than ever before. Today he realizes, what has been proven in thousands of cases, that an annual definite planting of Sugar Beets will bring him the most profit over a period of years. **Grow Sugar Beets!**

# **An American Parade** of Progress

In the parade of American progress, there can be no resting on yesterday's laurels. To stand still is to fall behind, to drop out of the parade.

The automobile or radio of a few years ago, for example, would find no market today. Refrigerators, clothing, cameras, office equipment-in all industries the old models are constantly being rendered obsolete by improvments in style, value or performance.

Michigan's telephone service has kept pace with this great march of progress. There is little resemblance between the original service and that of today-as little as there is between the first "horseless carriages" and the splendid, efficient automobiles that Michigan is now supplying to the modern world.

The tremendous advance in telephone service was achieved by years of research in the famous Bell laboratories; by the engineering skill of the Western Electric Company in producing dependable, standardized equipment; by the efficiency and loyalty of operating and administraive personnel. Thus, American's world supremacy in telephonic communication was won by tireless effort co-ordinated under this unchanging policy: To supply the best service, and the most, at the least possible cost.

That policy has stood behind your telephone for more than half a century. Year by year it has made the service swifter, more convenient, freer from error. It has brought the telephone within the reach of all-has made it a valuable factor in the domestic and industrial life of modern Michigan.

Sincere and thorough, the search for improvement must continue in order that the telephone shall maintain its well-deserved place in America's parade of progress.

## SHEEP AND GAME **THREATENED BY COYOTES, WOLVES**

Hunters and Sheepmen Ask State to Exterminate These Pests

Covotes and other predators luring in the vicinity of Grayling on December 16, 1936 we're assured, received scant comfort by the sentiments expressed by a group of 130 sheep raisers, sportsmen, conservation officers and county agricultural agents. They had gathered from 19 counties in both peninsulas to confer as to the proper steps to take in dealing with destructive wild animals.

Evidently, here was an issue on which sportsmen and farm folks could find a common meeting ground. It was brought out by several of the speakers that coyotes and other predatory animals not only attack the sheep flocks, but are destructive to many forms of game, including rabbits, ground nesting birds, and even deer. None of those who spoke favored the idea of protecting any predatory animals in any way for sport purposes. There was an unanimous agreement that all efforts should be bent toward their control and if possible their extermination.

Referring to the history of coyotes, in Michigan, Mr. P. J. Hoffmaster, director of the state conservation commission, declared that although coyotes had been known in the lower peninsula only 15 or 16 years they have been spreading constantly down state and have now been found as far south as Berrien county.

He reviewed the experiences of conservation officers in dealing with coyotes and other predatory animals under the state trapper system and the bounty system. In his opinion bounties are more effective and satisfactory than state trappers in dealing with this problem. The money which has been used for such bounties has been taken from the hunters' and trappers' licenses and can not be increased without some new source of revenues.

Farmers and county agents from various counties gave startling reports as to the increasing depredations being inflicted by coyotes to the sheep flocks in their section of the state.

Casper Blumer, Alcona county agricultural agent, stated that the first sheep loss in that county that was known to be caused by coyotes occur-1936 WOOL POOL sheep loss in that county that was red in 1932 and that now 60 sheep men in Alcona County have reported such losses. Mr. A. F. Longpre, a farmer living near Curran, said he had lost 60 sheep this season as a result of coyote killings.

A Clare county spokesman said, they will chase us out." In northern Clare county last year 171 sheep were reported as killed by coyotes. H. L. Barnum, Missaukee county agricultur-

> Pool Has Made Good Record During the 18 years that Wool

driving and insurance go together. Farmers and Life Insurance "Lift insurance is coming more and more into favor with farm people as a sound investment. There is much to be done. Hardly more than half of our Michigan farm families are protected by life insurance. Among those renting farms, only 47 in 100 have any life insurance. In the last few years our State Farm Life Insurance Company has brought insurance to more than 5,000 families, most of whom were without insurance.

## vation would set up and organize a was that so many wool growers failed to heed the Association's advice and 4-H Girl's "College Hope" Calf Permits Her to Enter M. S. C.

Six years of 4-H club competition in livestock projects has put enough money in the bank for Louise Porter, 16, Lapeer High School senior, to count on entering Michigan State College next fall.

Recently the Black Angus calf which she holds in the picture, won the championship honors at the 4-H show in Detroit, adding more than \$1,000 to her bank account. Appropriately the animal had been named "College Hope."

Her ability in livestock work and showmanship was evident a year ago when at the Detroit show she won grand championships for single lamb and pen of lambs with some Shropshires.

At East Lansing she intends to enter the Liberal Arts division. After the preliminary two years she will select a major study for a four year degree.

There is a difference in the kind of refrigeration used for fresh meat and for freezing meat. When meat is frozen, the ordinary layman says that it is put in "cold storage." Less than two per cent of its beef and lamb is placed by Swift & Company in what is termed "cold storage."

Retail meat dealers will not pay within two or three cents a pound as much for beef and lamb that have been frozen and from which they expect to cut steaks, chops, roasts, etc., as they will for unfrozen.

This difference in price is made notwithstanding the fact that Swift & Company believes frozen beef

as unfrozen. On the average only about 1.9 per cent of the total beef produced in the United States in one year and approximately .9 per cent of the total lamb are frozen. These small amounts of beef and lamb that are frozen are mainly used in the manufacture of sausage products and other prepared meats.

PRIC

From this it can be seen that meat packers do not buy cattle and lambs in times of big receipts, freeze the meat from them, and in that way make a big profit. Over a period of years, Swift & Company's net profits from all sources have averaged and lamb are worth just as much only a fraction of a cent per pound.

SATURDAY, JANUARY 2, 1937

## **UTILITIES UNDERBID REA IN MICHIGAN** AND IN NEW YORK THREE GOOD "BUYS" FOR YOUR FARM

SIX

Writer in Country Gentleman **Compares** Their Offers To Farmers

Michigan and New York are two states where private electric power firms seem to be going Uncle Sam's REA one better by offering a more attractive rural electrification program, writes Arthur W. Baum in a recent issue of the Country Gentleman.

Consequently, said Mr. Baum, up to this time no rural electrification administration lines have been built in Michigan or New York.

"Unlike other good things of life, electricity does not come free," Baum writes, although in Michigan it is brought "free" of line construction costs to the farmer's door where an average of five customers per mile guarantee a monthly income of 12.50 per mile for five years.

"The rural man must learn," Baum adds, "if he doesn't know it already, that no matter whose money is used to put up the poles and pay the lineman's salary, there must be adequate economic support for the investment, otherwise someone will get hurt and frequently it will be the rural man himself.

REA in some cases is adventuring into a thinner territory than the utilities have dared to enter, but even REA is indulging in a form of skimming the cream, as they so often accuse the power companies of doing, for REA will not lend on what it considers insupportable projects. And insupportable projects are usually those where there are less than three customers to the mile, which mean REA will have to skip many, many miles of farm country.

"The job of securing the line itself can be accomplished if there is sufficient revenue in sight for the. builder, either private or REA. A typical REA co-operative asks for \$180 revenue from each mile per year to justify construction. Most utilities in country that is not too rough, or too far removed from powers, will put up free lines with that much revenue guaranteed by the customers. Some states have laws forcing the utilities to erect lines wherever prospective customers guarantee revenue of 11/2 to 2 per cent of construction costs, which, on \$1,000 a mile construction, means \$180 to \$200 per mile per year.

"Many of the private utilities go this yardstick one better. Michigan utilities ask for only \$150 revenue a mile where there are five customers to the mile, and it is notable that REA has made no headway in this state. In New York state, Niagara Hudson Power corporation will take a chance if 31/2 customers to the mile are willing jointly to guarantee \$84 a year in revenue, or \$2.50 per month each. Niagara Hudson's lines average 4 customers to the mile. Consumers Power and Detroit Edison in Michigan average less than 5 to the mile. REA's projected average is just under 4 to the mile."

## Calcium Carbide Gun For Frightening Birds

A bird frightening apparatus that may save Michigan orchard owners much of their crops in future years is being tested by H. A. Cardinell research associate in horticulture at Michigan State College. The first experiment in Allegan county give promise of results, especially practical in small orchards. The equipment now under test consists of a calcium carbide gun which explodes at long or short intervals. With the gun is a swinging and clattering apparatus that helps frighten away the marauding robins, starlings and other birds without killing them. At the end of the season after tests in various parts of the fruit belts in the state, the college will summarize findings. The experiment will describe the apparatus and present information so that orchard owners will be able to learn where the bird frightening equipment is practical or impractical, cost figures and usage.

### LEGAL USE OF FERRETS

Nurserymen and fruit growers may own and use ferrets in protection of their property against rabbits by securing a permit from the director of the department of conservation.

## CREDITS ON PURCHASES Help Pay Farm Bureau Dues!

NOTICE TO MEMBERS: Purchases of Farm Bureau Brand, dairy and poultry feeds, seeds, fertilizers and fence from your local dealer; also, purchases from our clothing and ulankets dep't at Lansing, are eligible to membership credits when declared.

MAIL YOUR DEALER SALES SLIPS to the Michigan State Farm Bureau, Membership Dep't, 221 North Cedar Street, Lahsing, about every three months.

BE SURE Farm Bureau brand goods are entered on slip as "Farm Bureau Alfalfa," "Millmaker." "Mermash,"

\$10 annual dues mature life mem-berships; \$5 annual dues do not, but participate in Membership Credits, which reduce the amount of dues pay-

Life members receive their Mem-bership Credits in cash once a year.

We furnish addressed, postage pre-paid envelope for this purpose on your request.
