THE TELEPHONE Keeps the Family Together

Dad and Mother live on the farm. Son John attends Michigan State College at Lansing. Daughter Marion teaches in a town across the state. Yet the telephone brings them all together whenever they please. Mother likes to call Marion now and then for a pleasant chat. John calls home almost every week end.

It costs surprisingly little, too. For, reduced rates on calls to most places are in effect every night after seven and all day every Sunday.

If you have friends or lovers living at a distance, the telephone operator gladly will tell you how little it costs to call them.

BERRIEN RAIN BUREAU OIL CO. DOES IT WELL

Members of County Farm Bureau Are Stockholders. First Dividend

The Berrien County Farm Bureau has announced the latest dividend on its preferred stock which was issued in the 1925 fiscal year. The dividend of $.06 per share, payable December 15, brings the total dividend paid by the Bureau to $16,223 since it began operations.

This is one of the finest Bureau dividend campaigns ever conducted. The stockholders have faith in the management of the Bureau, and the first dividend, which is paid January 15, has been in full. The amount paid this year is the largest ever paid by the Bureau in its history.

The Bureau has a large number of stockholders, including many of the farmers in the county, and the dividend is paid on the basis of one share for each $100 paid in for stock. The total amount paid this year is $16,223, which is in addition to the $16,223 paid out in the early part of the year.

The Bureau has a long history of dividend activity, and the stockholders have faith in the management of the Bureau, and the first dividend, which is paid January 15, has been in full. The amount paid this year is the largest ever paid by the Bureau in its history.

HOW MUCH DOES IT COST TO PRODUCE YOUR EGGS?

Andrew G. Lawhead, manager of the Muncie Farm Bureau, exhibited an interesting chart which shows the cost of producing eggs as a percentage of the market price. The chart shows that the cost of producing eggs has increased steadily over the years, and that the market price has remained relatively stable. The chart also shows that the cost of producing eggs varies widely from one area to another.

The chart showed that the cost of producing eggs varied from $0.05 per egg in the eastern part of the country to $0.15 per egg in the western part of the country. The market price of eggs varied from $0.25 per egg in the eastern part of the country to $0.30 per egg in the western part of the country.

The chart also showed that the cost of producing eggs varied widely from one area to another. The cost of producing eggs in the eastern part of the country was much lower than in the western part of the country. The market price of eggs varied widely from one area to another, with the highest price being paid in the western part of the country.

Coldwater has another good year

Russel Russians, Irish Cobblers, White Cokepas, Ketil's, and Ketil's Michigan potato growers, and the Michigan potato growers, have all produced a good potato crop this year. The crop was estimated to be about 100 million bushels, which is a record crop for the state.

The good crop was the result of favorable weather conditions and good management. The farmers worked hard to produce a good crop, and they were rewarded with a good harvest.

The Michigan potato growers have all produced a good potato crop this year. The crop was estimated to be about 100 million bushels, which is a record crop for the state.

The State Farm Bureau and the National Program

Questions and Answers for March Community Meetings

By J. V. VADER

Director of Membership

Foreword

The present economic plight that besets the farmers of the nation is the most serious ever to face the American farmer. The sources of national origin are faced with serious economic plight at this time. The agricultural situation has been so grave that it has been termed a nationwide crisis. The situation is such that it is a national crisis affecting farmers and non-farmers alike. The present situation has been brought about by the following factors:

1. The low prices of farm products as compared to the cost of living.

2. The increased cost of living due to war and economic conditions.

3. The increased cost of production due to war and economic conditions.

4. The increased cost of transportation due to war and economic conditions.

5. The increased cost of labor due to war and economic conditions.

6. The increased cost of machinery and equipment due to war and economic conditions.

7. The increased cost of materials due to war and economic conditions.

8. The increased cost of insurance due to war and economic conditions.

The present situation has been brought about by the above factors, and the American farmer is faced with a grave economic plight. The farmer is confronted with the problem of how to make a living in the face of these factors. The farmer must find a way to increase his income and decrease his expenses in order to make a living.

The American farmer is not alone in this economic plight. The non-farmer is also faced with the same problem. The non-farmer must find a way to increase his income and decrease his expenses in order to make a living. The non-farmer must also find a way to increase his income and decrease his expenses in order to make a living.

The American farmer and the non-farmer must work together to solve this economic problem. The farmer must work with the non-farmer to find a way to increase his income and decrease his expenses in order to make a living. The non-farmer must also work with the farmer to find a way to increase his income and decrease his expenses in order to make a living.

Conclusion

In conclusion, the American farmer and the non-farmer must work together to solve this economic problem. The farmer must work with the non-farmer to find a way to increase his income and decrease his expenses in order to make a living. The non-farmer must also work with the farmer to find a way to increase his income and decrease his expenses in order to make a living.

The only way to solve this economic problem is for the American farmer and the non-farmer to work together. The farmer must work with the non-farmer to find a way to increase his income and decrease his expenses in order to make a living. The non-farmer must also work with the farmer to find a way to increase his income and decrease his expenses in order to make a living.

The American farmer and the non-farmer must work together to solve this economic problem. The farmer must work with the non-farmer to find a way to increase his income and decrease his expenses in order to make a living. The non-farmer must also work with the farmer to find a way to increase his income and decrease his expenses in order to make a living.
**Are Consumers Entitled to a Voice in Our Milk Business?**

From the Record of their interest in the Farmer's Supply Co., the Answer is Yes; Should They Get the Members of a Milk Commission?

By W.R. BURTON WILSON

The question of consumer interest in the milk business is exercising considerable concern in the public mind. Consumers are demanding the right to express their opinion and to have a voice in the management of the milk industry. This demand has been met in various ways, but the most effective and practical method is to establish a Milk Commission, consisting of representatives of the consumer, the producer, and the processor. The Milk Commission should have the power to investigate and regulate the milk industry, and to establish standards of purity and quality. Consumers are entitled to a voice in the management of the milk business, and a Milk Commission is the best way to give them that voice.

---

**LETTING THE WATER RUN**

(Instead of you)

There's enough to do on the farm without your having to worry about water, and carry it into the house, barn, or yard.

Cheap electricity will do it—and it means more convenience and sanitation. More than relief to womenfolk from that age-old water fetching chore. It's good business for you.

Healthier, heavier stock, from good, fresh drinking water. Increased milk production, too. Huge put on weight from plenty of water—but you have to let them get the water first.

Electricity improves the quality of water, too. Safes from stagnation, and the growth of algae.

And as for home comfort—let the family vote.

---

**Egg Exhibit at Farmers Week**

A new feature of Farmers Week, 1939, will be an egg exhibit. The eggs will be judged on the basis of size, color, and freshness. The purpose of the exhibit is to promote the sale of eggs and to encourage consumers to use eggs as a source of nutrition. The exhibit will be open to all farmers, and the prizes will be awarded to the farmers who exhibit the best eggs.

---

**Egg Production**

Egg production is a major source of income for many farmers. Eggs are a nutritious food and are a valuable source of income for farmers. The demand for eggs is increasing, and farmers are encouraged to increase their egg production.

---

**Electric Water Warming**

Electric water warming is a convenient and efficient way to heat water. It saves time and energy, and is a good way to ensure that water is always available for use. Electric water warmers are available in various sizes and styles, and are easy to install and use.

---

**Consumers' Power Company**

Consumers' Power Company is a cooperative electric utility that serves rural areas. They are committed to providing safe, reliable, and affordable electricity to their members. They are dedicated to improving the quality of life for their members and are always looking for ways to improve their service.
