Comment on Two Big Farm Meetings

Nationale's Coops and Farmers and Industry Met at State College

By MR. ED F. W. W. HARRIS

As one who is closely associated with the progressive phase of agriculture, it is a great pleasure to me to be in the presence of bringing together the leaders of two such important organizations as the National Farmers Union and the National Co-operative Union of America. It has always been my desire to see the two organizations working together for the benefit of the farmer and the consumer.

The purpose of bringing these organizations together was to discuss the problems that face the farmer and the consumer and to find solutions that would be beneficial to both.

The National Farmers Union is an organization that represents the interests of the farmers of the United States. Its primary goal is to improve the economic conditions of farmers, and it works to ensure that they receive a fair price for their goods.

On the other hand, the National Co-operative Union of America is an organization that represents the interests of the consumers. Its primary goal is to ensure that consumers receive fair prices for the goods they purchase.

The meeting was held in the recently constructed State College building, which provides a modern and comfortable setting for such discussions.

The conference was well-attended, with representatives from various states attending, including some who had traveled great distances to be there. The atmosphere was one of cooperation and a shared desire to improve the lives of both farmers and consumers.

The two organizations agreed that there were many areas where they could work together. Some of these areas included:

1. Increased research into new methods of farming and production
2. Improved transportation and distribution systems
3. Greater emphasis on environmental sustainability
4. Enhanced marketing and public relations

The meeting ended with a commitment to continue working together, with plans for future meetings to further discuss and implement these areas of cooperation.

The conference was a great success, and both organizations look forward to continuing their collaboration in the future.
Farm Co-operatives Believe in Farmers and in Economic Justice for Them

American Institute of Co-operation Told That Modern Farm Co-operatives Are True Instruments for Democracy

Franklin D. Roosevelt, Executive Secretary of the American Institute of Co-operation, told the Michigan Farm Bureau last week that farm co-operatives are true instruments for democracy.

"The cooperative movement," he said, "is one of the most important phenomena of our time. It is a great force for democracy and it is a great force for the advancement of man."

The cooperative movement is not only a force for the advancement of man, but it is also a force for the advancement of our country. It is a force for the advancement of our economy, and it is a force for the advancement of our democracy.

The cooperative movement is not only a force for the advancement of man, but it is also a force for the advancement of our country. It is a force for the advancement of our economy, and it is a force for the advancement of our democracy.

Bees Make or Break Yield of Clover Seed

In Iowa Botanist URges More Insectaries for Pollinating Bees For Seed

Honeybees have been undersold in recent years. The clover seed industry is

losing millions of dollars each year because of this neglect. Therefore, the

Iowa State College botanist urges that insectaries be set up on farms to

produce needed bee colonies at a cost good for either the beekeeper or the

producer. The right honeybees will produce for seed and for honey.

Mention that according to the 1934

Agricultural Marketing Act, there is no purchase of bee colonies that

will be guaranteed for the coming year. But to double the yield, the country

will have to be divided into regions for bee colonies. In this way every little

producer will have his bee colonies, and every little producer will have

his own bee colonies. The honeybees will be protected and the plant

bees will be protected.

Produce the bees.

The annual production of red clover seed is probably increased 10 to 20 per

cent. The Kansas Farm Bureau is giving some attention to this problem of

providing bee colonies on Kansas farms.

Community Groups Look Ahead to Sept.

August is Month to Start More Groups: Think About Projects

BY KENNETH S. WERKER

Rural Reconstruction and Educational Director

For the purpose of securing more community groups, the Farm Bureau has designated the month of August as an "Open House" month, during which time representatives of the Farm Bureau will visit communities throughout the state to work with the local Farm Bureau and interested individuals to build up community groups. The concentration of efforts will be on building up the number of community groups, as these groups are the building blocks for the future of rural reconstruction and re-

cultivation of the community. The Farm Bureau is aware of the fact that there are many people who are interested in starting new groups, and it is the purpose of the Farm Bureau to assist these people in organizing their groups.

Why Community Farm Bureau Groups are Needed

The need for community Farm Bureau groups is more than ever before. The Farm Bureau is the only organization that can provide the leadership, the guidance, and the support that are necessary for the successful development of community groups. The Farm Bureau has a proven record of success in building up community groups, and it is the purpose of the Farm Bureau to continue this work in the future.

The Farm Bureau is looking for interested people to join its ranks and become active in the work of building up community groups. The Farm Bureau is looking for people who are interested in the development of their communities, and who are willing to work for the betterment of their communities.

The Farm Bureau is looking for people who are interested in the development of their communities, and who are willing to work for the betterment of their communities. The Farm Bureau is looking for people who are interested in the development of their communities, and who are willing to work for the betterment of their communities.
