The Stader Splint

The Stader Splint is a metal bar which bridges a fracture. It is named after its inventor, Dr. Otto Stader, a dentist at Geneva. The splint is used to support and stabilize a fractured bone, allowing the patient to be mobile in a short time instead of being bedridden for weeks.

Crawford, a member of the House committee on banking and agriculture, said that Michigan banks are clear at par, with 442 banks out of 443 clearing checks at full value. Crawford recommended that serious fractures be treated with the Stader splint, which saves patients many weeks in bed.

Common products and supplies are used in great quantities. Among the smaller crafts taking an important part in this war effort, there are shipbuilders and paper mills. Paper has produced a lot of pulpwood this winter, and we can help further by using less paper and recycling.

The splint is permanently installable and can be removed as needed. It is suitable for use by anyone, regardless of age or gender. The Stader Splint is a remarkable invention that has revolutionized the treatment of fractures and has saved countless lives and limbs.

Junior Farm Bureau Activities

By MARGARET MURHAN

A meeting was held recently by the Junior Farm Bureau section of the Farm Bureau. The meeting was well attended, with many discussions on various topics.

The meeting was chaired by Mrs. Robert Campbell of Niles, with Mr. and Mrs. Robert Lobel of Benton Harbor, and Mr. and Mrs. Robert Wolters of Decatur.

There were 22 members present, along with some guest speakers.

The meeting concluded with Officer James Luce, a member of the Junior Farm Bureau, thanks everyone for their support and dedication to the organization.

Ingham Makes 2,000 Mylar

Ingham County Farm Bureau has increased its membership to 2,000 members. This is a significant milestone for the organization, and they have set a new goal of reaching 2,500 members this year.

The Farm Bureau is a grassroots organization that provides education, advocacy, and services to members. They have a variety of programs, including youth programs, educational programs, and advocacy programs.

The Farm Bureau is a vital part of the community and works to support local farmers and agriculture. They provide a platform for farmers to come together and discuss issues affecting their industry.

Community Farm Bureau Activities

By MERRILL G. AUSTIN

The Community Farm Bureau has been active in various programs and activities. They have held several events, including a 7-inch plowing contest.

The Community Farm Bureau is a group of farmers who work together to support each other and the community. They have a variety of programs, including educational programs, advocacy programs, and community service programs.

8-TRACK DEBATE ON FOOD SUBSIDIES

Powell and Sowers Debate Food Subsidies

MARCH 28 at the office of the local Farm Bureau, Robert Powell and Don Sowers debated the issue of food subsidies.

Powell argued that subsidies are necessary to support farmers and ensure a stable food supply. Sowers disagreed, stating that subsidies are wasteful and that the government should focus on other areas.

The debate was well attended, with many farmers and members of the community present. The discussion was lively and informative, with both sides presenting strong arguments.

Co-op's Reply to Attacks

March 29 at the local Farm Bureau, Robert Powell and Don Sowers debated the issue of food subsidies.

When the War Is Over

That much yearned for, almost legendary, day will mark a new era for transportation, as it will for everything else.

And our railroads will be ready.

We have plans for that day—plans that are already starting to look real, surprisingly progressive.

Michigan's railroads will join in the great change ahead.

They are picturing a future of improved plants, changed equipment, faster schedules, more efficient operation of both freight and passenger services.

The railroads have learned many things during this war period. America will benefit from this new "know how" in the days to come.

"When the war is over" America will move at an increased tempo. But no matter how much faster life will be, or how much greater will be the demands upon transportation, the railroads will be in the forefront, carrying the bulk of America's increased and accelerated passenger and freight traffic, and doing it with smoothness and efficiency.

Michigan Railroads Association
**Limeroll**

What It Can Do

Several months ago when our crop, LIMEROLL, first came on the market at the Iowa State College experiment station at Ames, we had several exciting reports from farmers who used it in the management of apple, peach and pear orchards. They reported that LIMEROLL controlled the mealy bug, the scale insects, the wooly apples, the codling moth and the apple maggot, which are the most serious insect pests in fruit orchards.

LIMEROLL has been in use for over a year and has been tested in orchards in various parts of the United States, and the reports have been uniformly excellent. In fact, we have had some reports that LIMEROLL has been more effective than any other material tested in the fight against apple pests.

LIMEROLL is sold in plastic bags at $1.00 per pound. It is sold to wholesale dealers in 50-pound lots at $1.25 per pound.

**NEW COVERING ABILITY**

for your fruit and vegetable sprays

**FILMFAST** in combination with virtually all of the commonly used insecticides and fungicides. FILMFAST will improve the spreading, filming and adherence of such spray materials. It has been used with all the main types of spray, and has shown a marked improvement in the application of insecticides and fungicides. It also improves the covering and adherence of such spray materials.

**SPRAYCOP** which has highly efficient spreader and adhesive qualities built right into it. It is used in the fruit or vegetable spray schedule for control of all copper-resisting fungous diseases. SPRAYCOP is compatible with all commonly used insecticides and fungicides.

USE FILMFAST in Local Areas and Sprayer Applications—sprayer applications containing certain other insecticides and fungicides—on Apples, Peppers, Small Fruits, Tomatoes, Potatoes, Beans, Cabbage (all Colards), Cantaloupes (all cucurbitae), Spinach, Celery, and many other food crops; also Shred Tree, Ornamental Plantings and Victory Gardens.

USE SPRAYCOP (alone or with any commonly used insecticides) for more efficient application against any fungous disease for which a copper fungicide is not effective.

**GET TOP RESULTS OUT OF THIS YEAR’S SPRAY SCHEDULES BY PROVIDING MAXIMUM PROTECTION FOR ESSENTIAL FOOD CROPS**

Effect of the War on Agriculture

Background Material for Discussion in April by
Our Community Farm Bureau Discussion Groups
By DONALD A. SCOTT
Membership Coordinator
This issue.

ROLL CALL QUESTION—Name one effect total war has on agriculture.

At the present time, due to war demands and international conditions, farm prices have been very depressed. In some areas, particularly in the fresh market basis, however, the situation remains normal because of activities in some parts of the country where fresh market conditions prevail.

1. What are the most desirable changes you have noticed in the production of farm products as a result of the war?

2. What changes in farm products have been brought about by the war?

3. What changes in farm products are you most likely to see after the war?

4. How have farm organizations handled the marketing of farm products during the war?

5. What are the future plans for the marketing of farm products after the war?

FOUR

POULTRY

May be more desirable than to choose between an entirely fresh market and a canning market. Therefore, he should choose between selling a fresh market and a canning market. Perhaps in some areas, a program combining the handling of products in both markets will be economical and efficient, for example, dehydrated beans and dehydrated meat after the war, even though the soldiers are eating a lot of it at the present time.

The future production of farm products will be affected by the acceptance by the public of the new developments. Whether or not these developments will have favorable acceptance, even if we might have to accept a lower price temporarily, is a matter of great concern.

War has brought about many new developments and has accelerated other developments. Whether or not these developments will affect the war demand on the agricultural products of this country can be answered only by an examination of the situation. Therefore, we must study and learn about the new developments to make wise decisions about their future production.
