EDITORIAL
The Retailer, the Packer and 84 cent Beef
When a housewife pays 84 cents a pound for a cut of beef, she's a pittance, it's a pittance for the farmer. She thinks it's too much, and she thinks that the farmers is largely responsible.

Why was that cut 84 cents a pound, and why are other cuts of meat comparably high?

Louis Bromfield Tells Them Off
the Packer and 84 cent Beef
Retailer,

By Justice William A. Smith gave opponents of the significance of co-operatives so long as economic general of Kansas charged that in its petroleum op-

eration, his figures and the packer's figures indicate other cuts of meat comparably high?

If that kind of an attack had succeeded, no doubt has implied and stated openly that co-operatives are.

Farmers Share Down,
Retail Prices Hold
As the market price of the consumer's feed dollar dropped to the lowest level in history, 60 cents for 84 cents a pound. The packer, however, remained firm on his retail prices, which included a 5-cent a pound, and a 5-cent a pound, and a 5-cent a pound.

May 19, 1930. Drought conditions on the plains are growing more severe. The May 19, 1930. Drought conditions on the plains are growing more severe. The May 19, 1930. Drought conditions on the plains are growing more severe.

Farmers, Food, and Freight Cars

A billion bushels of winter wheat alone—besides huge crops of spring wheat and other foods! That's the American farmer's answer to the challenging needs of America and the world.

And while the farmers have done this tremendous job, the American railroads have been doing their part in the work of feeding and supplying the world.

The railroads have carried, so far this year, more grain than ever before in any corresponding period, history. They are hauling more of freight, more than ever before in history. They are hauling more tons of freight into the needs of America and the world.

And while the farmers have done this tremendous job, the railroads—railroads—railroads—Railroads—railroads. They'll do the best they can with what they have and get. There are bound to be some holdups, some delays, some blunders. But they are doing their best.

Three miracles were taken out of Iraq and loaded on the rails for the Allied armies in the Middle East. Millions of dollars worth of goods, including hijackers, were loaded on the rails for the Allied armies in the Middle East. Millions of dollars worth of goods, including steel, copper, coal, and coal, were loaded on the rails for the Allied armies in the Middle East.

But the railroads—railroads—railroads—Railroads—railroads. They'll do the best they can with what they have and get. There are bound to be some holdups, some delays, some blunders. But they are doing their best.

What's the Matter With People?

BY JOHN GUTHRIE WILSON

Editor 222 Farm, Chicago, Illinois

It looks like the people are getting ready for the war. They are stocking up on food and supplies, and they are planning for the future. They are having meetings and discussions, and they are getting ready to do their part in the war.

We are the rich, the mighty, the powerful people of the world. We think we are the only people who can do anything about the war. But we are not the only people. The people of all countries are ready to fight for their freedom. They are ready to do their part in the war.

Van Buren Supply Aug. 27

The Van Buren County Farm Bureau will have its annual picnic at Myrtle 5th path at Paw Paw, Thursday, August 27. J. F. Yaeger of the Michigan Farm Bureau will speak on the topic of "The Future of Agriculture," and other members of the Farm Bureau will speak on topics of interest to farmers.

The average motor vehicle in the United States is "covered" with more than 25,000 miles of rubber and 100,000 miles of steel and other materials. The average motor vehicle in the United States is "covered" with more than 25,000 miles of rubber and 100,000 miles of steel and other materials.

Farm Bureau which will go to under 40 000 million dollars, United States will allow in 90% of the world's population. United States will allow in 90% of the world's population.
Responsibility for High Cost of Living

Background Material for Discussion in August by Community Farm Bureau Groups

By NORMAN K. WAGGONER, Research and Education

When the dollar bill begins to shrink, people begin to demonstrate the hard edge that the pay check has taken. The leader of the combat becomes figures. Show that the dollar bill now buys only about as much as 60¢ bought before the war.

We are inclined to compare the price of any particular commodity with the price we are used to paying for it. Just as we compare the value of a new automobile with that of a used automobile, or a used automobile with that of an old one.

Too Much Lime May Lower Crop Yields

R. L. Anderson, state agricultural college, college, reminds farmers that lime is not the only solution to acid soil. The use of lime, especially on acid soils, is often recommended without considering all the factors that affect crop yields.

Lab tests and field studies show that lime is not a cure-all. Different crops may require different amounts of lime, and the type of lime used can affect crop yields. It is important to consider the type of lime used, the amount of lime applied, and the time of application.

Experimental programs have shown that the use of lime can increase crop yields, but it is not the only factor that affects crop yields. Other factors, such as soil pH, soil texture, and climate, also affect crop yields.

Cost of Blue Cross Service

In the type of Blue Cross service provided, the costs of hospitalization are significantly higher than the costs of medical care. This is due to the fact that Blue Cross covers more than just medical care.

Experimental programs have shown that the new DDT insecticide has no effect on plants which is called "over." Nor is it added to land that is already over. Too Much Lime

Dust and Sprays for Potatoes

No. 1 Dust—Dried Copper Phosphite, emulsified with DDT, Copper not less than 17.5% and not less than 7% metallic copper. Recommended when both beet and potato are to be sprayed.

No. 2 Dust—DDT Insecticide.

Getting a crop's growth off to a promising start is important for the successful production of potatoes. The use of dust and spray materials is important in the growth of potatoes.

A combination of dusting and spraying with DDT will result in improved quality as well as increased yields of potatoes, according to H. O. Meehan of the Michigan State College. The combination of dusting and spraying with DDT has been shown to be effective in controlling pests and diseases of potatoes.

The real place of nutriment, with proper care, is the farm, but all the world's health problems are not just the result of poor nutrition. Proper water is essential to the health of all animals and their offspring.

Write for detailed information today, on the work of this company and your nearest office.

In many areas soils are laden with unneeded salts, and there are many places where water is so hard that it is not suitable for use. The water is often too alkaline, too acid, too hard, or too soft. This means that the water is not suitable for use in the homes of people who live in these areas.

FARM BUYERS' LEAFLET

In addition to the water, the water is often too hard for use in the homes of people who live in these areas. The water is often too alkaline, too acid, too hard, or too soft.
