EDITORIAL

Do Exports and Loans Sustain the Boom?

Exports of U.S. goods and services have increased rapidly since the first of the year and are now about four times as large as in 1940, according to Lawrence Witt, agricultural economist at Michigan State college.

Michigan agriculture is not affected as much as industry by the recent increases. Exports of agricul­tural products reached high levels earlier and now are not increasing as rapidly as exports of industrial goods. The large volume of exports has helped to maintain high levels of industrial pro­duction and purchasing power in the United States.

The value of U.S. exports of goods and services is over twice the value of our imports. Exports are now occurring at the same time that the demand for imports each year. Imports, on the other hand, are around $7 billion. (This approximates $9 billion in value difference between our imports and exports is paid for by the issuing of paper currency.)

In the veto message it was said that the whole highway program was a "house of cards" and that it could come down at any time. They had borrowed and raised equipment to serve 600 or 600 miles a day. They were unable to meet their obligations and were forced to sell the plant for 10 cents on the dollar.

The National Association of Farm Credit Administrators telegraphed that the Farm Bureau under­stands the poor financial condition. This is the first time in history that the Farm Bureau has been asked to take such a step.

At Chicago, September 5 the board of directors of the National Association of Co-operatives, comprising state and regional farm co-operatives from coast to coast, and representing one-third of the nation's farmers, at the House Small Business Committee under chairmanship of Walter Plesser, Republican of Missouri for the type of income taxes, has been started on cooperatives.

The National Act on Farm Co-operatives telegraphed its protest to Carroll Rence, chairman of the Republican National Committee and the Farm Bureau, by the new party has reversed its historical position with respect to farm co-operatives, and if the "Pleasur" attack has the official approval of the leadership of the Republican party.

Power Line Carries Telephone Service

A few weeks ago at Crystal Falls in the upper peninsula there was placed in operation a new type of telephone service for rural people.

This service is provided by the installation of radio telephone equipment for the farm home, a telephone message was transferred to the 2,400 volt power line as high frequency radio impulses. The equipment is installed in Crystal Falls where appropriate radio telephone equipment separated the message impulses from the power impulses and back it up to the transmitter.

It was said that up to eight customers may be accommodated on each of six radio frequencies available on the power line. Six customers may be going on at once without interference.

The equipment in the home is really a miniature radio broadcasting station and radio receiver operating on a fixed frequency. It is considered barely more space than the regular telephone box.

The program will bring telephone service to areas where it costs too much to build ordinary telephone lines. The REA and the Bell system have been working on it for some time.

It's Later Than We Think It Is

‘As soon as we build new farm equipment and make a thorough inspection, the customers may be becoming more expensive to operate than to use it for the farm, it will be too late to change."

The statement was made by Mr. Thacher, general manager of the Michigan Bell Telephone Company at Lansing.

Dairy Products

Chickens

Inquiries for chickens should be made early in the season.

The chickens should be watched closely, as they should have an opportunity for the best results.

The chickens should not be fed too much food, as this will cause the chickens to become fat and die.

The chickens should be kept cool during the summer months, as this will cause them to become sick.

A Corn Lesson From the Past

By George S. Meade, W. N. Meade, and J. E. Meade

American Press

More on fences with lower cost and better protection

FARM NEWS

The following pages contain a wealth of valuable information on the subject of fences and how to make them.

1. The first page contains a detailed description of the types of fences available, including wire fences, post and rail fences, and barbed wire fences.

2. The second page contains a comparison of the costs of different types of fences, including the cost of labor, materials, and maintenance.

3. The third page contains a diagram of the different types of fences, showing the advantages and disadvantages of each.

4. The fourth page contains a list of different types of fences, including the types of fences that are best suited for different types of crops.

5. The fifth page contains a table of the costs of different types of fences, showing the cost per foot for each type.

6. The sixth page contains a chart showing the cost of labor per hour for each type of fence.

7. The seventh page contains a detailed description of the steps involved in building a fence, including the preparation of the site, the selection of materials, and the construction of the fence.

8. The eighth page contains a list of different types of fences, including the types of fences that are best suited for different types of crops.

9. The ninth page contains a table of the costs of different types of fences, showing the cost per foot for each type.

10. The tenth page contains a list of different types of fences, including the types of fences that are best suited for different types of crops.

Farmers stand to REAP BENEFITS from Michigan Bell's proposed rate increase

A lot of money will be needed from investors to expand and improve the phone service. Our 5-year post-war program alone will cost over $1,500,000. But investors will be willing to put up the money if they can see a clear return on their investment. So, to protect the farm quality of your service, telephone companies must be able to operate as efficiently as they can to make the best use of their capital.
DAIRY BARN SHOULD BE WELL PLANNED

Planning a new dairy barn is an important step in any farm development. A barn is something that will have to give service throughout the life of the livestock. A larger yard and more than one row of stalls can give details of paving for farm yards of these treatments can be compared with the necessary amount of pavement required to prevent the delignification of silage when it is fed to cows. This research was done in cooperation with the Michigan State College at East Lansing. A complete plan for the dairy barn is not yet available, but the following suggestions may be of interest.

PARASITE CONTROL

Improve Wool

The wool of sheep should be improved by controlling the parasites. Wool is a valuable product and the following should be considered:

- Use a suitable type of feeding stuffs.
- Improve the quality of wool by controlling the parasites.
- Use a suitable type of feeding stuffs.

These suggestions are based on the results of experiments conducted at the Michigan State College. The wool of sheep can be improved by controlling the parasites.

REYNOLDS-SHAFFER COMPANY

Save Money with

In many of the county's large slaughterhouses, the E-S Water Conditioner saves money on the following:

- Soften the water before use.
- Improve the quality of wool.
- Save money on the following:

The E-S Water Conditioner is a product of the Reynolds-Shaffer Company and is sold through farm bureaus and other retailers.

ASSOCIATE'S WOMEN

In many of the county's large slaughterhouses, the E-S Water Conditioner saves money on the following:

- Soften the water before use.
- Improve the quality of wool.
- Save money on the following:

The E-S Water Conditioner is a product of the Reynolds-Shaffer Company and is sold through farm bureaus and other retailers.

CONGRESSIONAL

HOPPERS FOR CORN

A wet year, such as 1947 has been.

Good crop rotation is an important factor in the successful production of corn.

FUEL OIL .

Will Be Short This Winter!

Save Time - Cut Costs with a CO-OP CORN PICKER

You'll find that a CO-OP CORN PICKER will be a fail-safe investment for your farm for a great many reasons. Here are some of the most important:

- Low cost, easy to operate.
- No extra labor cost.
- No extra equipment cost.
- No extra power cost.
- No extra fuel cost.
- No extra maintenance cost.
- No extra repair cost.
- No extra storage cost.
- No extra insurance cost.
- No extra scrap value.
- No extra depreciation value.
- No extra interest cost.
- No extra tax cost.
- No extra tax benefit.
- No extra tax deduction.
- No extra tax refund.
- No extra tax credit.
- No extra tax allowance.
- No extra tax abatement.

LITTLE PIGS THRIVE ON FEED HIGH IN PROTEIN

Little pigs thrive and make remarkable gains on a certain commercial ration containing a rather high level of protein. High protein is desirable in the diet of pigs because it helps maintain muscles which are in constant use. Pigs gain more rapidly when the muscle tissue is not being used and is not being broken down. The high protein ration used in this test is comparable to those fed in most commercial feeding stations where pigs are grown on a high protein ration.

Lansing, Michigan

MICHIGAN FARM NEWS SATURDAY, SEPTEMBER 8, 1940
Community Farm Bureau

Activities

The Ingersoll-Detroit of the Michigan State Farm Bureau has for many years been an active factor in promoting the state Farm Bureau Offices and other organizations. We would appreciate hearing from any individual who might be interested in participating in these activities and in assisting in the promotion of these organizations.

There is no time for MONKEY BUSINESS in the Dairy Business.

The laughing, mirthful tone of the rebellious livestock near the MICHIGAN FARMING BUREAU's office is quite noticeable. The MICHIGAN FARMING BUREAU office is located on the farm and just a few miles from the eastern boundary of the state. The MICHIGAN FARMING BUREAU office is the headquarters for the dairy farmers in the state.

Agent WANTED

The MICHIGAN FARMING BUREAU has the following positions open at its office: Sales Representative, Office Manager, and Bookkeeper. The positions are full-time and require a minimum of one year of experience in the dairy industry.

County Farm Bureau Organization Directors

We introduce to Farm Bureau members through the full time organization directors hired by County Farm Bureaus. We shall present others now working as soon as we can get a photograph. These men have been hired to help develop the County Farm Bureau programs.

Michigan Farm Bureau

MICHIGAN FARM BUREAU OFFICE

**Do We Want Democracy?**

Background Material for Discussion in September by Community Farm Bureau Groups

By ROBERT E. WODACK, Research and Education

Upon first thought, this will appear to be a question with an obvious answer, but let us stop right here and ask ourselves some questions.

Are we willing to make the sacrifices which are necessary to make democracy work?

Are we willing to put forth the time and effort to make a careful analysis of candidates and other measures appearing on the ballot?

Are we willing to give of our time and effort to intelligently cast our ballots or to take positions of responsibility in our own farm organizations?

Another question we might well ask is this: If we are willing to make the necessary sacrifices to make democracy work, do we actually do it?

It must be remembered that democracy is not a gift from Heaven. It is something that must be earned, just as we must be willing to make sacrifices in order to have an automobile, a hame, or even our family. Perhaps someone wants these necessities in life and is willing to make the necessary sacrifices of time and effort in order to obtain them. We do not expect that anyone would do it for us. Likewise, if we truly want democracy, we must be willing to make sacrifices of time and effort in order to have it and to maintain it.

There is a very real difference between "wanting" democracy and "wanting democracy because we need it". Many of us in the present generation would be willing, under certain conditions, to bow to the rule of a strong man, or to pickets, or to name it as we please; to have the country run by a few people who are willing to make a far larger sacrifice than we are. But to have democracy work, we must be willing to make sacrifices for them.

In our daily lives, the evident weakness of our democracy is quite clear. The present condition of the world will take the country on a mission of discovery. It is possible that the present condition of the world may be a case of an effort to extend democracy to the whole world. The present condition of our democracy has not been recognized. It has been considered as a political philosophy. The present condition of democracy has not been considered as a political philosophy. It has been considered as a political philosophy. It has been considered as a political philosophy. It has been considered as a political philosophy.

Now, with the approach of fall, the endless streams of cattle and livestock begin to flow from the feedlots of America. As this flow comes to an end, the feedlots of America add millions of dollars to the nation's livestock industry. How important this is, you know, too. And you know how such year 'round marketing makes the best use of grass, feed, and labor.

The experiments conducted by the Department of Agriculture Research Department in every feeding area they have tried show that the feedlot of America adds millions of dollars to the nation's livestock industry. How important this is, you know, too. And you know how such year 'round marketing makes the best use of grass, feed, and labor.

New "Slant" Saves Pigs

Feedlots are food factories, you know. Feeds are the answer to changing feed gains. Feeds are the answer to changing feed gains. Feeds are the answer to changing feed gains.

The cool beans in hot water for 8 to 10 hours. Simmer beans about 2 cups cooked) make the best use of grass, feed, and labor. "Slant" saves pigs.

There is, on an average, more than 75 pig losses or damages to buildings up to amount of loss or damage to buildings up to amount of loss or damage to buildings up to amount of loss or damage to buildings up to amount of loss or damage to buildings. The experiments conducted by the Department of Agriculture Research Department in every feeding area they have tried show that the feedlot of America adds millions of dollars to the nation's livestock industry. How important this is, you know, too. And you know how such year 'round marketing makes the best use of grass, feed, and labor.
