

**Ask Congress to Approve Building Great Lakes-St. Lawrence Seaway**

Senator Theodore F. Green of Rhode Island and other Senators have asked Congress to authorize the United States to go into formation at Canada in 1 at starting the construction of the Great Lakes-St. Lawrence Seaway, which will be a high purpose an exalted purpose.

This is the first time, Mr. Blackey said, that Congressmen have opposed the project, which has been working for weeks on the proposed law.

**Dock Workers Way Ahead**

Several times in recent months organized dock workers in the United States and Canada refused to unload shipments of crab meat from Russia. Congressmen who represent the State of Michigan tell us that the U.S. Department of Labor has been working for weeks to get the workers to agree to unload the crab meat.

Mr. Blackey said that since Congressmen had been working for weeks to get the workers to agree to unload the crab meat, the Senate was considering a bill to make it compulsory for the workers to unload the crab meat.

**Cost of United Nations**

Official reports show that the United States paid nearly 300 million dollars in 1950 for the support of the United Nations, or more than one-third of its operating cost. Russia contributed a little over one-sixth.

**JFB Annual Spring Formal Set April 7**

The Michigan Junior Farm Bureau Promenade will be held in the United States on April 7 at 8 p.m. on the Michigan State University campus in the Gratiot Coliseum. All Junior Farm Bureau members and their friends are invited to attend. Each couple will be asked to bring a dish or a similar dish, and all food and drink will be available at the door.

Mr. Blackey said that the Michigan Junior Farm Bureau has been working for weeks to get the workers to agree to unload the crab meat.

**Neatly, 4,000 Were Enrolled in March**

The membership of the Michigan Farm Bureau for the first half of March 1950, when this edition of the Farm News went to press.

The organization now has 98.7% of the state goal of 46,150 members.

Sixty-two County Farm Bureaus enrolled 3,946 members during March to set a new record for work following the national membership campaign.

Wesley Howley, state director of membership acquisition, said that state membership representatives for Farm Bureau prepared a number of meetings at which the new leaders had been introduced.

The Michigan Farm Bureau has a good opportunity to become the first state Farm Bureau in the American Farm Bureau to attain its national membership goal for 1951. Last year Michigan was fourth to make it.

Moline Michigan First. All Community Farm Bureau members in Moline, Ia., are enrolled in Farm Bureau at a cost of 30 cents per year.

Mr. Howley said. Each community group that participates by securing three new members or enrolling two new members and renewing an old membership during April will receive a membership award.

**Livestock Exchange Sales $27,000,000**

The Michigan Livestock Exchange membership of 30,000 farmers was well pleased with the results from its recent expansion program.

At the annual meeting at Lansing, March 10, President Arthur Inglis told the Exchange that sales had reached a new high in 1950 and as compared to a volume of $7,000,000 in 1946.

"We are," in our fourth year of the expanded marketing program, "at the peak of our efficiency," Mr. Inglis said. The Detroit market continues to grow. Farmers recognize the value of cooperative sales organization at the terminal market.

An organized group of producers can sell more efficiently than several thousand farmers acting as individuals.

"This is evident in the large volume of livestock marketed in the auctions and daily sales at the Michigan Livestock Exchange at Kalamazoo, Portage and St. Louis. The Farm Exchange Co-op in Kalamazoo, Portage and St. Louis is the most this year.

"In 1948, the sales have reached a new high, with weekly sales of 30,000. The Detroit market is now the leading market in the United States for livestock.

"The GROWTH in volume at the Michigan Livestock Exchange is due to the increased efficiency of the cooperative system and the increased efficiency of the cooperative system in the retail market.""
Plant Clover This Year and Be Sure That You Inoculate

"Field Bureau members that this was the year of the "clover," Roy Bennett, manager of the bureau, has been talking to farmers and urging them to plant clover. While the clover may not produce as much hay as other legumes, it is a great soil builder and is highly efficient.

However, if legumes are planted under the right conditions, they can be very successful. When the plant is growing, it takes up nitrogen from the soil, if it is not supplied by some bacteria. The bacteria were often more successful than those which did not receive the right type of inoculant.

Community Farm Bureau Activities

Community Farm Bureau activities are focused on promoting the use of inoculants to improve soil fertility. The cost is so small (10c to 25c per acre of legume seed that farmers really can't afford to take a chance.

A great deal of research has been done to improve the efficiency of legumes. This research has led to the development of inoculants that can increase the yield of legumes by as much as 30%.

Rules and Prices

The Farm Bureau women of Michigan this year have planned a number of activities to promote the use of inoculants. These activities include a series of public presentations, a "Tree Trunk Girdling Produces..." series, a series of "How to read a crop" posters, and a "Tree Trunk Girdling Produces..." series.

Clean Seed Is Important

Seed inoculation with effective microorganisms is the best and cheapest way to improve soil fertility.

Good Seed Is The Foundation of Good Farming

There's a Farm Bureau Seed for every need and your best guarantee of good, clean seed is to look for the familiar Farm Bureau Seed and on every bag of seed you buy. You can't get better seed anywhere at any price.

Clean Seed is Important

Good Seed Farm Bureau Seed is as near as your telephone service to farmers at a reasonable price. There's a Farm Bureau Seed for every need.

Farmer's Full Production in National Mobilization

Community Farm Bureau Discussion Topic for April

Background Material for Program this Month by Our Community Farm Bureau Discussion Groups

MICHIGAN FARM NEWS

Director of Research and Education

We talk of the war in Korea. This campaign is not a distant threat to the American people. This is a growing threat to the American economy and to the way of life we have all enjoyed. The American farmer is in a position to contribute to the defense of our nation. This is his contribution. He will make his contribution through his production of food and fiber, through his production of machinery, and through his production of energy. His contribution will be measured in terms of the amount of food and fiber he produces, in terms of the amount of machinery he produces, and in terms of the amount of energy he produces. This is his contribution to the war effort.

The American farmer is in a position to contribute to the war effort in other ways. He can contribute to the war effort by his willingness to give up his personal comforts and his personal pleasures. He can contribute to the war effort by his willingness to work extra hours, to work harder, to work smarter. He can contribute to the war effort by his willingness to sacrifice his personal interests for the good of the nation.

The American farmer is in a position to contribute to the war effort by his willingness to think of others before himself. He can contribute to the war effort by his willingness to work for the good of the nation, not for his own personal gain. He can contribute to the war effort by his willingness to help others, not to hurt others.

The American farmer is in a position to contribute to the war effort by his willingness to be a good citizen. He can contribute to the war effort by his willingness to obey the laws of the nation, by his willingness to respect the rights of other citizens, by his willingness to be a good neighbor, by his willingness to be a good citizen.

The American farmer is in a position to contribute to the war effort by his willingness to work for the good of the nation. He can contribute to the war effort by his willingness to work hard, to work smart, to work for the good of the nation. He can contribute to the war effort by his willingness to be a good citizen, by his willingness to obey the laws of the nation, by his willingness to respect the rights of other citizens, by his willingness to be a good neighbor, by his willingness to be a good citizen.
