Vote No. 3 Nov. 4

Michigan Must Win This Fight

Public Affairs Division of Michigan Farm Bureau

Hundreds of thousands of dollars from labor unions are being thrown against Farm Bureau members and other citizens who are fighting to save a balanced legislature for Michigan through proposed constitutional amendment No. 3 on the ballot November 4.

Leaders of labor groups are using half truths and name-calling in an effort to gain control of Michigan's state government through the adoption of proposed constitutional amendment No. 2. It is the CIO's plan for reappointing seats in the legislature.

Immediate goal of the CIO campaign for Proposal No. 2 is to regain the control of the Michigan Senate. This prize will carry with it the control of any Constitutional Convention which might be called to write a constitution for our state.

As a matter of fact, the adoption of Proposal No. 2 is the first step in the plan of labor groups to write a new state Constitution in line with their ideas.

Proposal No. 2 would elect both Senate and House on a basis of population only. This would give a compact group of four counties in the Detroit metropolitan area of southeastern Michigan 15 Senate seats and a controlling share in the 17th out of a total of 33 seats. The same areas would elect at least 50 of 99 members of the House.

This would mean that a simple majority of the voters in those counties, which would be less than 26% of the state's population, could elect the majority in both the Senate and the House.

By bloc voting those legislators could control the legislature and state government. The present delegation of 21 members of the House from Detroit frequently practice voting as a bloc.

Proposal No. 3 for a balanced legislature would give a balanced distribution of seats in the Michigan legislature to all 83 counties. The House would be apportioned on a basis of population and Detroit would have 38 seats instead of 27 as at present. The Senate would be continued on its present basis, which recognizes both area and population. Two new seats in the Senate would be added to the House and the House would have 59 seats.

The principles of Proposal No. 3 for balancing population and area are the same as are in effect in the Senate and House of Congress for the same purpose.

Proposal No. 3 has tremendous support in out-state Michigan and in Detroit itself.

At the time of the last reapportionment Wayne county had 38% of the population, but would only have had 38 seats in the House. However, the 100 member limit provided in our Constitution left only 27 of those 38 seats for its population. Respect for reapportionment had been fulfilled. Under Proposal No. 3 Wayne county will receive full representation in the House.

Both Proposal No. 3 and No. 2 would place the House on a population basis. Both would eliminate the bedrock bill in Detroit and require the election of representatives by districts instead of at large. Both would secure a reapportionment of the legislature every 10 years.

Proposal No. 2 is aimed directly at getting control of the Michigan Senate, and eventually control of a state constitutional convention.

VOTE NO. 2 and VOTE YES ON No. 3!
Farm & Mermash are... Thank you. Michigan Farm name of County Farm Bureau. eggs need she lay in the year before the saving (25 cent~ per 100 lbs.) in cost. Suppose a price buyer bought an inferior mash for $5.00 per ton (or 25 cents per 100 lbs.) in cost.

That's "protection made to order!"

November Price Buyers Beware

Making money doesn't always come from the cheapest feed. Figure it out for yourself.

A good hen eats 50 lbs. of mash a year. That is that Mermash 20%, or 18%, that hen gets all the quality protein, vitamins "A", "B", Riboflavin, B complex, etc., needed to produce every egg her inheritance, and your management allows her to lay. Then she gets the minerals she needs in the one meal (except some exceptions from oyster shell). She gets calories from the scratch grains she eats.

Check Formula Before Buying

Suppose a price buyer bought an inferior mash for $5.00 per ton (or 25 cents per 100 lbs.) lower cost. The hen won't lay as well because the cheaper mash does not carry all the vital factors needed for top production. Farm electrification, with 98.9... and then some. Cottons for Winter... Cotton towels and sheets... it... they are big fashion news. Cotton towels and sheets... it looks like wool... or... they are available in winter colors. Make sure you are watching instructions before buying, though.

Defeated in June, Returning in 1953

John C. Lynn, legislative director of the American Farm Bureau at Washington, says that a Universal Military Training Bill will be introduced in the Congress in 1953. Mr. Lynn made this statement in late October concerning national legislation of interest to farmers.

Universal Military Training. The American Farm Bureau Federation has had long standing policy resolution in opposition to Universal Military Training. A bill to inaugurate universal military training was introduced in the last session of Congress. It was reported out favorably by the House Armed Forces Committee and referred back to that committee on a close vote in the House. This had the effect of killing the proposal for further consideration in the 83rd Congress. This is still a live subject and we can expect it to surface during the 84th Congress.

Migrant Workers. The AFBF took the lead in calling a conference between the United States and Mexico in an effort to work out a satisfactory migratory labor program with the country. As a result of these efforts and the splendid cooperation of the state Farm Bureaus, we were able to get a new agreement between the U. S. and Mexican government. According to all reports, the results of the new agreement were quite satisfactory, however, we can expect new attacks upon this program in 1953.

Fair Trade Price Legislation. The Congress passed the Fair Trade Price legislation with an overwhelming majority. There were only ten votes against this measure in the House. We had hoped that the President would veto this legislation, however, he signed it and it is the law of the land. AFBF vigorously opposed this legislation.

Farm Price Supports. As you know, rigid 90% price support with the continuation of the dual parity formula was continued through the 1950 Federal Budget amendment to the price control section of the Defense Production Act. AFBF vigorously opposed this legislation.

Federal Budget. Perhaps our No. 1 legislative job in 1952 was our effort to try to balance the budget. We made recommendations to Congress totaling about 15 billion dollars reduction; 7 billion of this was in the defense budget; 7 billion of this was in the defense budget; 7 billion of this was in the defense budget.

Allocation of Strategic Material. We worked very closely with the defense agencies in trying to make sure that agriculture got a fair share of the strategic materials. The authority for allocation of these materials is contained in Title 1 and 2 of the Defense Production Act. AFBF vigorously opposed this legislation.

The meaning of ownership and responsibility for the individual of his co-op, purchasing everything from his co-op, working for the success of the success of the cooperative is being increased by theCo-op Development Bill. Mr. Lynn states that the farm cooperative is being increased by the Co-op Development Bill. Mr. Lynn states that the farm cooperative is being increased by the Co-op Development Bill.

Speaker at MACF Annual Tells Group

Jerry Voochos, executive secretary of the Cooperative League of the U.S.A., was the principal speaker at the 8th annual meeting of the Michigan Association of Farmer Cooperatives, October 16. The conference, which also included a state co-op meeting, was held at the Kellogg Center building of Michigan State College, East Lansing.

Voochos warned the group of Michigan co-op managers and directors that "one of the great dangers of our time" is the loss of control over our own destiny through lack of participation and interest. "A cooperative policy could be a major factor in revitalizing our rural towns and our country," he said.

Lift track boosts profits for fruit growers

Full growers who handle 10,000 crates a year can realize generous savings on labor and equipment costs by using a lift truck to handle their fruit. A recent survey by agricultural engineers of Michigan State College and the U.S. Department of Agriculture has shown that a lift truck will do a better job of handling fruit than a hand truck, and will pay for itself in less than a year. The lift truck is a three-wheeled vehicle that can carry from 500 to 750 pounds of fruit. It is powered by an electric motor and is driven by a control lever on the handle. It is also equipped with a lifting mechanism that can raise the truck to a height of 10 feet.

Why we pump telephone poles

Do you know that for the pole of a telephone pole the whole pole is not more than 2 inches thick? That's right! The pole is made up of many small layers of wood glued together. This makes it strong enough to hold the wires and still flexible enough to withstand wind and rain. The layers of wood are cut from trees, and then dried and stacked in a kiln. After they are dried, they are split into thin strips, which are then glued together to form the pole. The pole is then heated in a steam furnace to make it strong and durable. This process is called "grain addition." The pole is then painted and coated with a special material to protect it from rusting and rotting.

MICHIGAN BELL TELEPHONE COMPANY

FARMERS ESCAPE!

FARMERS escape from the high cost of city automobile insurance rates through their own "farmers' automobile insurance company."

Statistics prove that more accidents occur in cities than in the country. Some companies have different rates for city policyholders and for farm policyholders.

In the FARM BUREAU MUTUAL there is just one rate, and you know that it is for farmers only. Check first with your local Farm Bureau insurance man for low cost automobile and truck insurance.

Treat Cattle In Late Fall

To Stop Lice

Late fall is the best time to treat for internal and external parasites in livestock. The lice thrive in the cooler weather, but lice are generally more difficult to control when the weather gets colder. However, there may be a weather condition that will be right for control, such as a wet, cool, windy weather.

The idea is to treat the cattle before they begin to lose hair, which is usually in late fall. This will help prevent the spread of lice to other animals. It is also important to treat the pasture, as the lice can live in the grass and infect the cattle when they go out to graze.

In areas where lice are a problem, it is recommended that the cattle be treated every year. This will help keep the lice population under control and prevent the spread of disease.
Farm Bureau and What It Is Reaching For

Discussion Topics

Community Farm Bureau Discussion Topic for November

Background Material for Program in November by
Our Community Farm Bureau Discussion Group

DONALD K. DIXON
Director of Research and Education

Farm Bureau will have to be brief—briefer with a catch phrase—"All join hands and circle to the right." To develop this organization it was necessary to join hands in common purposes. It was the task of national policy these people have moved to "the right"—they have sought to preserve to the American system those elements that have helped to keep our nation strong and productive.

With Whom Have You Joined Hands? You have reached your major decisions. Your regional groups have come into the interests of 1,420,210 other farm families that made up the American Farm Bureau Federation. In 1952 the Farmer members were located in states in America and in Puerto Rico. Little Rhodie Island will probably be on the roster within a year.

Allan Kline or Stanley Powell, take on public issues is defined by the local groups. The resolutions at these levels have been submitted to the county organization for consideration. So, the resolutions at these levels do not exist in the system. Resolutions do in fact result in no changes of any sort just because they are changes. The resolutions are discussions within the American system under which farming has been conducted and remained free. These systems are being attacked constantly. The Farm Bureau has aimed to destroy the system. It has had to use legislative power to protect the interests of agrarian farmers. As always it will shape under a system of free choice and opportunity. Its chief standard of living has never been equalized in any other country.

THE FARMER's stand over the years has been a "conservative" one, and always is to destroy the fabric of the system! The greatest American revolutions do not always destroy the world as it has been, as some would say "reactionary." The American system has been a system of free choice and opportunity. Its chief standard of living has never been equalized in any other country.

ONE OF the symptoms of the far and recent American revolution has been the sprouting up of "preservation groups." Farm Bureau has had to use legislative power to protect the interests of agrarian farmers. As always it will shape under a system of free choice and opportunity. Its chief standard of living has never been equalized in any other country.

In the middle of the twentieth century. And freedom still is the basis.

REVOLUTIONS do not always destroy the world as it has been, as some would say "reactionary." The American system has been a system of free choice and opportunity. Its chief standard of living has never been equalized in any other country.

The people must have active committees to work out the goals. And the stand it has taken is based on the fact that a figured storm ships a ship. Revolutionary forces have always been organized around a stand. This is to be expected. Farm Bureau has had enough strength to mean real competition, but the people have held to this stand as right and true. What has been the Farm Bureau policy? Let us see.

REVOLUTIONARIES, or extremists, are called that because they overthrow the edifices of their time. They have no care to preserve the sound values or principles of a system. They are out of their faction, and "injunctions." They would destroy the whole system in another system. They would institute a new form of government of the very different edifices to their living in the American system under which farming has been conducted.

FARM BUREAU'S stand over the years, has been a "conservative" one, on the edge of the system, always is to destroy the fabric of the system! The greatest American revolutions do not always destroy the world as it has been, as some would say "reactionary." The American system has been a system of free choice and opportunity. Its chief standard of living has never been equalized in any other country.

do it. They are too widely scattered.

REVOLUTIONARIES, or extremists, are called that because they overthrow the edifices of their time. They have no care to preserve the sound values or principles of a system. They are out of their faction, and "injunctions." They would destroy the whole system in another system. They would institute a new form of government of the very different edifices to their living in the American system under which farming has been conducted.

FARM BUREAU's stand over the years, has been a "conservative" one, on the edge of the system, always is to destroy the fabric of the system! The greatest American revolutions do not always destroy the world as it has been, as some would say "reactionary." The American system has been a system of free choice and opportunity. Its chief standard of living has never been equalized in any other country.

On the State and national committees to work out the goals. The people must have active committees to work out the goals. And the stand it has taken is based on the fact that a figured storm ships a ship. Revolutionary forces have always been organized around a stand. This is to be expected. Farm Bureau has had enough strength to mean real competition, but the people have held to this stand as right and true. What has been the Farm Bureau policy? Let us see.

THE FARMER's stand over the years, has been a "conservative" one, on the edge of the system, always is to destroy the fabric of the system!
