Sustainable Food and Farming Systems

Directory of Michigan Expertise

*Extension Bulletin E-2491
New June 1994*

MICHIGAN STATE
UNIVERSITY
EXTENSION

This directory is designed to help identify and promote information sharing among Michigan organizations, institutions and individuals involved in sustainable food and farming systems. Information is available on these topics and more is being developed all the time. But the information is often difficult to find because much of it exists in people's minds or in hard-to-find materials. This directory includes information about several organizations serving the entire state and a county-by-county listing of individuals and organizations involved in sustainable food and farming systems.

Any listing of sustainable agriculture resources is certain to be incomplete. This first Michigan effort is no exception. This directory is just a snapshot. We know there are

many others who should be included. In the back of the directory is a form for updating current entries and for submitting new ones. We hope to make this information available electronically via the Internet and to publish future printed editions.

This directory was developed as part of a grant funded by the W.K. Kellogg Foundation through its Integrated Farming Systems Initiative. The directory project team consisted of Christine Lietzau, Michigan Department of Agriculture, chair; Merrill Clark, organic producer; Richard Harwood, Michigan State University; Kenneth Dahlberg, Western Michigan University; and Harlan Ritchie, Michigan State University.

INTEGRATED FOOD AND FARMING SYSTEMS (SUSTAINABLE AGRICULTURE)

Michigan agriculture is rapidly moving toward what many call "sustainable". There is widespread agreement that sustainable agriculture must be increasingly productive, producing wholesome food at competitive prices; that it must have reduced impact on the air, surface water and groundwater; and that it must be socially acceptable within rural communities. At the same time, consumer demand is increasing for locally grown fresh food and for produce grown with minimal or no pesticide use.

These ever closer interactions between agriculture, rural communities, consumers and the environment call for greater biological, social and economic integration. Common factors include the need to contain production materials — including nutrients, crop and animal by-products, and pesticides — within farms and in the upper soil layers, and increased use and effectiveness of biologically based practices. Aspects promoted by many Michigan farmers, scientists and groups listed in this directory include but are not limited to:

- Promotion of local food systems, including farmers' markets, pick-your-own and community-supported agriculture.
- Maintenance of soil quality (increasingly referred to as soil health) through aggressive use of cover crops, crop rotations and appropriate tillage systems.
- Reduction or elimination of pesticide use through integrated pest management and use of biological controls.
- Adoption of livestock management systems that optimize the effectiveness of natural immune systems and reintegrate the animals into the landscape; this includes intensive rotational grazing.
- Efficient handling of organic wastes, including use of compost.
- Field-level management of nutrients for efficient recycling and for containment.

Various organizations and individual producers approach these and other aspects of integrated sustainable systems in varying ways, with differing emphases depending on their values and situation. The list that follows represents a broad sampling of those who focus heavily on systems integration as defined above.

MICHIGAN STATE UNIVERSITY

Michigan State University faculty and staff members and graduate students carry out research trials throughout most of the state on several aspects of integrated systems.

This research takes place on experiment stations and in replicated trials on farms through farmer collaboration. Included are trials on the effects of organic production and crop rotational management on soil quality; cover crop selection and use; integrated management of weeds, insects and diseases; intensive rotational grazing; compost production and use; and a range of other integrated practices. Most faculty members conducting such trials have joint Extension/research/teaching appointments. A list of all subject matter specialists and their areas of expertise is available through MSU Extension.

Specialists work through organizations such as the Michigan Agricultural Stewardship Association (MASA) as well as one on one with producers. They provide subject matter expertise to county MSU Extension agents and to growers through presentations, bulletins, newsletters, agent training and direct producer inquiry/contact. Michigan State University departments with faculty members working directly on integrated systems include:

- Agricultural Economics.
- Agricultural Engineering.
- Animal Science.
- Anthropology.
- Botany and Plant Pathology.
- Crop and Soil Sciences.
- Entomology.
- Forestry.
- Horticulture.
- Resource Development.
- Sociology.

Research that deals specifically with organic systems takes place in the departments of Horticulture, Crop and Soil Sciences, Resource Development and Anthropology, but this constitutes only a small segment of the total research.

WESTERN MICHIGAN UNIVERSITY

At one time, Western Michigan University (WMU) offered both a general major in agriculture and a series of rural related courses. Many of the practical courses were offered at the University Farm. Some five years ago, the administration, in spite of faculty, alumni and Farm Bureau support for the major, terminated it. A new interdisciplinary minor proposed by the faculty was not approved by the administration. What is available now is a variety of agriculture courses in the Department of Consumer Resources. These include Agronomy (Crop Production), Food and Society, Introduction to Soils, Landscape Gardening, Landscape Design, Land Use and Soil Conservation, and Agricultural Management. Agriculture-related courses are offered in the Geography, Geology and History departments.

The mission of Michigan State University Extension (MSUE) is to help people improve their lives through an educational process that applies knowledge to critical issues, needs and opportunities. With offices in 82 of Michigan's 83 counties, it provides Michigan citizens local access to their land-grant university. County- and district-based Extension agents bring knowledge to bear on local issues through educational approaches including workshops, conferences, discussion groups, newspaper columns, newsletters, field demonstrations, individual assistance and more. MSU faculty members, including Extension specialists, apply their more specialized expertise to issues through activities including training agents; developing publications, instructional videos and software, and advising statewide groups.

MSUE's three program areas are:

- Agriculture and Natural Resources (ANR).
- Community and Economic Development (CED).
- Children, Youth & Families (CYF).

Each area offers educational programs that support agricultural sustainability, with ANR most directly involved.

Current ANR emphasis areas relate quite directly to sustainability. They are:

- Integrated pest management.
- Animal management.
- Waste management.
- Marketing Michigan agricultural products.

To locate your local MSUE office, check the local telephone directory listings under "county government." For additional information on programs throughout Michigan, contact the state program office: Extension Agriculture and Natural Resources, 11 Agriculture Hall, East Lansing, Michigan 48824-1039. Telephone: 517-355-0117; fax: 517-353-4995; Internet: diragmkt@msuces.canr.msu.edu.

MICHIGAN AGRICULTURAL STEWARDSHIP ASSOCIATION

The Michigan Agricultural Stewardship Association (MASA) is a statewide non-profit organization committed to promoting food production and farming systems that are profitable, environmentally safe and scientifically sound. MASA was formed in 1991 by a group of farmers and other agriculturists who thought that more could be done to research and promote environmentally friendly farming systems. The organization participates in the establishment of farmer-designed demonstration and research plots, sponsors field days and informational meetings, and publishes *The Land Steward*. Membership is open to individuals committed to sustainable agriculture. Membership information is available from Russ LaRoux, executive director/secretary, 605 N. Birch Street, Kalkaska, MI 49646. Telephone: (616) 258-3305.

Community-supported agriculture (CSA) provides an economic and social alternative to our conventional system of food production and distribution. In the latter system, food is better travelled than the people who eat it, producers and consumers rarely interact, and neither has control over their food supply. A CSA, by contrast, is a local institution. It represents a joint venture between farmers and/or gardeners (growers) and people who want to eat fresh, nutritious, clean food. Such a model has existed in Japan and Europe for decades but was brought to the United States less than 10 years ago (1986). Since that time, it has grown from a few farms on the East Coast to many hundreds of farms throughout the United States.

No two CSAs are exactly alike. Each is adapted to the needs of its participating members and the history and resources of its area. Flexibility, clearly, is one of the CSA's principal characteristics, but there are others. CSAs are built on shared responsibility and trust. Growers agree to raise fresh food for members. While most CSAs raise only fruits and vegetables (often as many as 30 to 40 different types), a few also raise animals for meat, milk and eggs. Members purchase shares before the season begins to provide the funds to pay the grower's salary and operate the CSA. A share sufficient to feed a family of four can range in price from \$250 to \$500 per season. Membership can also vary from a handful of participating families to over a hundred families.

Frequently, members are also required to work a designated number of hours for the CSA (e.g., 2 hours/month), weeding gardens, keeping books, tending bees or distributing produce. These tasks, like the CSA's budget, the crops grown and general operating guidelines, are agreed upon by the members at the start of every season. Likewise, everyone shares in the risks (e.g., poor harvests) and the rewards (e.g., bumper crops and healthy food) each season. Once or twice a week, from late May to late October, produce is harvested and distributed at the farm site or at distribution points within the surrounding community.

CSA members have the opportunity to get to know one another and become familiar with the natural rhythms and processes involved in growing good food. The wisdom of recycling, the effectiveness of intercropping, of crop rotations, cover crops and crop diversity can be realized firsthand. CSAs tend to be small in scale (less than 10 acres), labor intensive and organic. This is the case in Michigan. It is felt that more rather than larger operations bring the soil, people and good food closer together.

ORGANIC FARMING IN MICHIGAN

Before 1973, farmers and growers in Michigan who wanted to raise crops and animals without reliance on synthetic fertilizers, pesticides, antibiotics and hormones were essentially on their own. In January of 1973, the first meeting of the Organic Growers of Michigan (OGM) was held. By 1974, more than 100 members were on the roster of the southwest Michigan chapter alone, where the organization was born. Member meetings were held primarily to swap techniques, order bulk organic supplies and hear from other knowledgeable farmers.

Today, more than 150 certified Michigan growers and farmers raise a diversity of crops from adzuki beans to peaches to goat cheese. These growers, in both the Lower and the Upper Peninsula, manage organic farms from 4 to 1800 acres. They market at their farms, at farmers' markets, or through wholesalers and retail outlets across the state. With eight chapters acting as grass-roots, autonomous extensions of a state council, the OGM carries the organic message to people throughout the state.

Organic advocacy and legislative involvement in pesticide-related matters are important facets of the OGM's work, and an annual organic workshop is held in March during Agriculture and Natural Resources Week at Michigan State University.

Grey Larison, 1993-1994 state OGM president, predicts that the next few years will be "an exciting period politically and socially for the movement to organic farming methods," partly because of the passage of the federal Organic Foods Production Act in 1990. The National Organic Standards Board (NOSB) is, as of this writing, within a few months of completing organic crop and livestock standards for production, processing, certification and labeling.

The Michigan Organic Food and Farm Alliance (MOFFA) is a not-for-profit organization dedicated to promoting an environmentally sound and socially just food system for Michigan. Formed in 1991, MOFFA will help bring food,

farms and families together and build alliances between growers and eaters of organic foods. As program funds are raised, MOFFA will provide educational opportunities for people across the state to learn about environmentally sound organic agricultural production and how to provide for its long-term success.

MOFFA's executive director and an eight-member board of directors set goals related to educational programs, publish a regular newsletter and hold coalition meetings with other like-minded organizations.

Organic certification is the kingpin for food credibility in the natural food marketplace. The OGM certification standards (1992) define a common set of principles inherent in organic farming: encouragement of good stewardship of the earth, production practices that work in harmony with natural ecosystems, and developing stability through diversity, complexity, and recycling of energy and nutrients. In addition, synthetic and toxic materials detrimental to soil and ecosystem health are prohibited.

Growers classified as certified have not used any synthetic chemicals on their land for at least the past three years and have instituted a system of sustainable and environmentally sound production practices that enhance soil life and create habitat for beneficial insects and wildlife. Transitional growers have less than three years of using no chemicals on their land and are still working into rotation programs, green manuring and other cover cropping practices to control weeds and recycle nutrients back into the soil without resorting to herbicides and synthetic fertilizers.

Some growers elect to farm organically but not become certified because they do not sell to stores, which are beginning to require certification for organic food sales. These growers usually engage in direct marketing where they can describe their organic operation to the buyer face to face.

The OGM has a state certification committee and holds inspector training sessions during the year, as does the Organic Crop Improvement Association (OCIA), a private certifying organization with chapters throughout the world. Consumers who find "OGM" or "OCIA" on the label of an organic product can know that one or the other organization has certified the authenticity of the organic practices and claims of that farmer or processor. This third party inspection and certification is insurance to the buyer that organic standards are adhered to all along the line from farm field to store shelf.

As federal certification standards come into place, consumers will be assured that "organically grown" will mean nothing less in one state than it means in another. In addition, all-organic food stores may open and consumers will find a greater variety and larger supply of organically grown foods than ever before. This result will prove to be good for the consumer, the grower and the earth.

ALCONA

FARMERS' MARKET HARRISVILLE:

Just south of the U.S. 23/M-72 intersection,
two blocks west of Lake Huron.
Open generally from Memorial Day to Labor Day,
on Wednesdays and Saturdays from
8 a.m. or so to about noon.

FARMERS' MARKETS **CANTON:**

On Ford at Sheldon Road in K-Mart parking lot, 3 miles west of I-275. Take Ford Road (M-153) exit. Open the last week of July to October on Wednesdays from 4 to 8 p.m. and Saturdays from 8 a.m. to 3 p.m.

DETROIT:

Just north of Gratiot, 1 mile east of downtown. From Gratiot, take Russell north over the Chrysler Freeway. Freeway directions: go onto I-75. Just east of downtown, where I-75 goes north, get off at the Gratiot exit. Parking: free parking in front of the market goes quickly on Saturdays, but there is a lot of inexpensive space at Riopelle and Alfred, a block east of Russell and three blocks north of the main market area. Open year round on Mondays through Fridays from 5 a.m. to noon and Saturdays from 5 a.m. to 6 p.m.

PLYMOUTH:

On Penniman, right off Main Street in downtown Plymouth. Next to the Penn Theater. Open mid-May to mid-October on Saturdays from 7:30 a.m. to 12:30 p.m.

MSU is an Affirmative Action/Equal Opportunity Institution. Extension programs and materials are available to all without regard to race, color, national origin, sex, disability, age or religion.  Issued in furtherance of Extension work in agriculture and home economics, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture. Gail L. King, extension director, Michigan State University, E. Lansing, MI 48824.  This information is for educational purposes only. References to commercial products or trade names does not imply endorsement by the MSU Extension or bias against those not mentioned. This bulletin becomes public property upon publication and may be printed verbatim with credit to MSU. Reprinting cannot be used to endorse or advertise a commercial product or company. Produced by Outreach Communications and printed on recycled paper using vegetable-based inks.
