An Important Communication from the National Master.

I have received several letters from the brethren in the past to the effect that the master of our Order had made no announcement.

Yours, etc.

L. C. D.}

PETTY CURRENCY QUESTION.

in the Tenth session the Constitution of the Order was finally adopted. It was said to the Grand Master to the adjournment and thus the Order was completed.

On the 10th of July, 1887, I went to the meeting of the National Grange and became a member of the Grand Lodge. The Grand Lodge was then composed of the following members:...
but generally conceded.

The other bulletin is by Mr. G. O. Davis, on "Locust and The Horn Fly." The following are the points:

Owing to the large area over which this locust like grasshopper is not now able to pen the eggs, the results of this research will be of great use in killing without harm to other animals, for several days, which will be of much benefit to the farmer.

The final issue of this season in Michigan shows the most improvement. The following have been selected for further attention:

1. The fat and meat are not much better informed of these goods, added to the soil by the potatoes do not seem to get this, we may sometimes have the best ration.

4. The fish fried in fresh manure. It is then the best ration of all the season for the sport of catching them.

5. Fish oil, and the process will kill the larve.

For the last issue, I am glad to say however, that I did not find that green manuring only returns to allow clover to fall down and to the oat field, meadow or cultivated field, but not where stock is pasture.

...
HELPFUL SUGGESTIONS.

A Few Suggestions for the Good of the Granges.

First, I will speak about general hygiene. Finally, in our Grange we had music for opening and closing. Sometimes we sing the organ alone; at other times we have a kind of organ which can be turned on and off at will. This organ we started a few months ago, and it is selected that all can sing for opening and closing and that the Leader can select the extra vocal and instrumental music on new programs to be interspersed with the literary work. I think so far it works well. A short time ago I had to send Miss Jennie Bead, First Secretary State Grange, and some opening ode cards. The Grange written out, cards for opening, and closing we sing God be with you till we meet again. We like the ode card.

Second, the State Secretary wrote me asking what I thought about having a stinging ode placed on the back of the opening ode card. I think it would be a good idea and know of no better words than these just mentioned. "O come! With you till we meet again..."

Third, if every word of this sound be a blessing and a benediction on all present and who bears the ball with weight and blessedly and sincerely feelings for each other after the inspiration those words give off. When we have general singing in more Grange we think we have better meetings and everybody seems to live up and it is soon over, to take part in the work. Please don’t misunderstand around, mind think I am not in favor of choral singing; I am an active supporter of the same.

Another suggestion. Would it not be a good idea to have a few more refreshments during the service occasionally, and also I think the Lord’s Supper in required. For frequently the Grange is the place to take refreshments to a service. I have been called from my country and similar services in which we can go through with it much better and believe the better.

It seems to me but filling that our Lord intended it to be the Grange, and in whose presence we have been before. I think we should do the best we can for the people and do not come down on us when we play to leave our house and the whole house with the old and the young on the evergreen shore. Let us be always thinking of the honor of the ritual as possible. Remember, we are the guests of heaven and all our trouble and work loses much of its dignity, and let us not forget the old idea: "What is worth doing at all is worth doing well!" and the extra literary work that see you have all the implements required for the work. In some balls where we have they are so many of our men that was necessary by their absence, their cost is but little and they are a great help. Try and always go your ball prepared to do something towards rendering the occasion interesting. If you can only repeat a quotation of a dozen darning words you will feel better and will be able to better next time more. But the most grumblers I have ever known in the change. Why, they even the very grumblers never do anything dashing themselves. We have to be willing to let the good spirits -

In the hands of the best of men, Ontario, Michigan. Pigs are always ready to die. They are not amused being hung, parboiled, boiled, and then resold for $1.50 a pound. They are then shipped to New York and the like places, and are sold as "pork". Our one and only breed of pigs is the "Ontario".

Address, E. B. HANCOCK, who is a leading breeder in the State.

The Grange Visitor.

One more month for Sanitation.

Hon. E. Goodrich desires you to say for him that he meant what he said in declining to discuss further the single tax theory.

It is stated that the New Yorkers will combine to force their wages up. A part of the program is the abolition of "tips." May the grangers join with them in this lamentable effort.

The editor wishes to be present and arrested under the New York law, enacted Jan. 14. To do so will require the issue of the paper not later than the 15th. When the editor is arrested for non-payment of fines and notices for next issue as early as possible.

GLEANINGS.

It is stated that the New York editor wishes to be present and arrested under the New York law, enacted Jan. 14. To do so will require the issue of the paper not later than the 15th. When the editor is arrested for non-payment of fines and notices for next issue as early as possible.

silver law was passed to defeat free coinage and later resumed but never was the silver restored. It serves to remind us without the means of plenty we are on the verge of want.

Some of the other nations, but it does not touch the true cause of those conditions.

In the London market there is disorganization, rumors of failure and anxiety. In the last twenty years concurrently with the demonitization of silver. I am in favor of silver money. The largest possible use of silver and its freest circulation are in the interests of all producers.

Demonetization says: "The present depressed condition of the United States is the business of the United States and not the business of Congress to determine the quality of the coin money and to declare its value." Congress decided on a standard to measure the silver money. The largest possible use of silver and its freest circulation are in the interests of all producers.

A dollar of one of them was worth about 16 times as much as the other. "Silver money is the best, and most convenient money. The largest possible use of silver and its freest circulation are in the interests of all producers."

"I will give a dollar of one of them was worth about 16 times as much as the other. "Silver money is the best, and most convenient money. The largest possible use of silver and its freest circulation are in the interests of all producers."
THE GRANGE VISITOR.

Woman’s Work.

SINGLE PLOW TREATMENTS WITH WATER.

HELLEN L. MANNING.

The following article which a portion of which was presented to the Society of Women’s Work, and which was published recently, contains some remarks which will do you and your readers good, and is worth your attention. I will try to be brief.

To the mind of a physician, it is well known how much simpler and more thorough a treatment may be in some instances when a patient is given some knowledge of simple treatments and instructions how to carry them out, and that this is true at least as far as the water docteur is concerned. Water as a means of treatment, of course, may be used with infinite success by those who are skilled in its use, but even the uninitiated can do much to benefit their health, and to that end I would like to give you a few simple and practical suggestions.

The treatment of the stomach, which is often a source of complaint, can be very beneficial when carried out with care and attention. One of the simplest and most effective methods is the use of water in various forms. Here are a few suggestions:

1. Water for the Relief of Pain and Soreness. For the relief of pain and soreness, especially in the stomach, water can be given in several ways. One method is to use a poultice made of flour and water, which can be applied to the affected area. Another method is to use a hot compress, which can be made by placing a hot water bag or a piece of flannel on the affected area. Both methods are beneficial in relieving pain and soreness.

2. Water for Digestion. Water can be used to stimulate the digestive system. One method is to use warm water after meals, which can help to break down food and assist in digestion. Another method is to use water to rinse the mouth and throat after meals, which can help to prevent the growth of bacteria and improve digestion.

3. Water for the Treatment of Dysentery. For the treatment of dysentery, water can be used in several ways. One method is to use a warm water enema, which can help to flush out the intestines and relieve symptoms. Another method is to use water to rinse the rectum and anal area after defecation, which can help to prevent irritation and discomfort.

4. Water for Cholera Morbus. For the treatment of cholera morbus, water can be used to prevent dehydration and to maintain electrolyte balance. One method is to use water containing electrolytes, such as salt water or sports drinks, which can help to replace lost fluids and electrolytes.

5. Water for Allergies. Water can be used to reduce allergic reactions. One method is to use a cold water compress on the affected area, which can help to reduce swelling and discomfort. Another method is to use a warm water compress on the affected area, which can help to reduce inflammation and discomfort.

These are just a few of the many ways in which water can be used as a treatment. The specific method to be used will depend on the individual's condition and the type of treatment needed. It is important to consult with a qualified healthcare provider to determine the best course of treatment.

The use of water as a treatment is not new, and has been used for centuries. It is important to remember that water should be used wisely and with care, and that it is not a substitute for professional medical care.

The importance of water in the treatment of diseases cannot be overstated. It is a simple and effective way to treat many conditions, and can be used by anyone with a little knowledge and care. It is a testament to the power of nature's simple remedies, and a reminder of the importance of water in our lives.
College and Station.

College.

(Typical Farm University Station.)

1. The earliest planting of corn has given an average yield of about two and one-half bushels of corn per acre more than any other planting, and over 12 bushels more than the last year's planting.

2. The highest average yield has been obtained from the third planting (about thirteenth inch) per acre, but if the crop is to be rushed it will be better to plant earlier and in a smaller amount of the plots.

3. Shallow cultivation of corn has given better yields than either medium or deep cultivation.

4. Shallow rainings of crops, including corn and grasses, have produced higher average yields than those deeply steaming the soil.

5. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

6. Shallow cultivation of corn has produced higher average yields than either medium or deep cultivation.

7. Shallow rainings of crops have produced higher average yields than deep rainings.

8. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

9. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

10. Shallow rainings of crops have produced higher average yields than deep rainings.

11. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

12. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

13. Shallow rainings of crops have produced higher average yields than deep rainings.

14. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

15. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

16. Shallow rainings of crops have produced higher average yields than deep rainings.

17. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

18. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

19. Shallow rainings of crops have produced higher average yields than deep rainings.

20. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

21. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

22. Shallow rainings of crops have produced higher average yields than deep rainings.

23. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

24. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

25. Shallow rainings of crops have produced higher average yields than deep rainings.

26. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

27. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

28. Shallow rainings of crops have produced higher average yields than deep rainings.

29. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

30. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

31. Shallow rainings of crops have produced higher average yields than deep rainings.

32. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

33. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

34. Shallow rainings of crops have produced higher average yields than deep rainings.

35. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

36. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

37. Shallow rainings of crops have produced higher average yields than deep rainings.

38. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

39. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

40. Shallow rainings of crops have produced higher average yields than deep rainings.

41. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

42. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

43. Shallow rainings of crops have produced higher average yields than deep rainings.

44. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

45. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

46. Shallow rainings of crops have produced higher average yields than deep rainings.

47. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.

48. A judicious rotation of crops, involving grasses and grasses, has produced higher average yields of the following year than of the previous year's planting.

49. Shallow rainings of crops have produced higher average yields than deep rainings.

50. Shallow cultivation of corn has produced higher average yields than medium and deep cultivation.
Western sports are the best. The next big event is the Perrottes Winter Games and will be held on Saturday, January 5th. The following activities will be included: 1. Ice skating, 2. Ice curling, 3. Ice hockey, 4. Ice fishing. The ice rink will be located in Central Park, and the games will start at 4 PM. For more information, please contact the Grange Visitor office.

Notices of Meetings.

A GLOPSE AT THE WORLD'S FAIR.

The passenger entering Chicago from the east, is likely to overlook some of the most important features of the World's Columbian Exposition. This is partly due to the rush of people during the opening days, and partly due to the location of the fair grounds. The fair grounds are situated in the southern part of the city, just west of the Chicago river. The grounds are enclosed by a fence, and are open to the public from 10 AM to 10 PM. The fair is free to the public, and all persons are welcome to attend.

A CLEVER PEST.

Mr. G. D. Davis of the entomological department of the Agricultural College, has been watching the ravages of a little black bug which has been doing considerable damage in the celery beds about Topeka, Kansas and Kalamacon. He found that it is a bug that has a long, black body, and is about the size of a pea. The bug is about one and a half inches in length, and is covered with a hard, black shell. The bug is a pest to the farmer, and it is necessary to have a plan to control it. Mr. Davis has been working on this problem for some time, and he has come up with a solution. The pest control plan is to use a mixture of sulfur and powdered chalk, which will kill the bug on contact.

Call to order at one o'clock sharp, for the first day of the season, and rally around your National Lecturer, and give as much attention to the subject as possible. This will be the grandest, largest, and safest event of the season, and it will be open to all farmers.

The Union meeting of Lenawee and Jackson counties will be held at Bawbeese House. There will be tables and hot water available, and the guest speaker will be Mr. E. H. Williams, who will speak on the subject of cheese making.

The appointments for Benzie, Manistee, and Lake counties will be held at G. B. Rental, and the speaker will be Mr. W. H. Hudson, who will speak on the subject of farming.

For Sale!

STEAMER "REAL" you can have a free trip to the World's Fair and return, as the G. P. A. (Detroit & Cleveland Steam Navigation Co.), Detroit, Mich. is offering this free trip to those who visit the fair. The steamer will leave Detroit at 8 AM, and return at 8 PM. The trip is free, and will include all meals and accommodations.

FAIR DEPARTMENT. To the Grand Union of the World, we have made a large reduction in prices for rooms at the Grange Visitor. We believe in giving the best accommodations to our visitors, and we are confident that you will be satisfied with the service we provide. We are offering rooms with 1 double bed, $1.00 per day, 50 cents each person; and rooms with 3 double beds, $2.25 per day, 38 cents each person. We have plenty of fresh air, quiet, and cool.

For other information, address DIAMOND CRYSTAL SALT CO., St. Clair, Michigan.

THE WORLD'S FAIR GRANGE.

Corner of 3rd Street and Saginaw Avenue, Chicago, Illinois.

TWENTY MINUTES RIDE FROM THE FAIR 333 EXECUTIVE CARS, 3 OTN PARASOL, NO OTHER CARS ON THE FAIR PARKING, NO OTHER FIRE, NO DANGEROUS INSTRUMENTS, PLENTY OF FRESH AIR, QUIET AND COOL.

ANNOUNCEMENT. In order to meet the popular demand for low prices while visiting the fair, we have arranged a large number of cars for the Fair. To meet the demand for rooms at the Grange Visitor Apartment Building. To all Grange members and friends we will make the following reductions: Rooms with 1 double bed, $1.80 per day, 50 cents per person; Rooms with 2 double beds, $1.75 per day, 44 cents each person; Rooms with 3 double beds, $1.50 per day, 35 cents each person. Meals 23 cents.

Suit of four rooms (three beds) furnished for housekeeping, 80 cents per day. Can make this suit five or six rooms (four beds) for larger parties. Must make special notice to waiter to pay cash to stay a week or more.

HOW TO REACH THE FAN. From the Fair grounds take a Grand Canyon & South Chicago Electric Car on full Grade or Grand Canyon, and take 64th St, Fair Gates. If coming in by Mich. Central Ry., get at Southern Ry. and take full Grade or Grand Canyon, and walk four blocks west on 63d St.

O. R. DUNNING, 308 M. and Saginaw Avenue, Chicago, Ill.
