I have just received a letter from an interested Patent in Michigan in which I am told that the farmers' organizations are thriving. It states that in the interest of farmers' organizations the National Union of Farmers,  the union stock yards at Chicago, and the Alliance, the F. M. B. A., the P. of I., and the open Alliance. It states that such co-operation would be an educational force. It would be an educational force to the name, each organization wanted to retain some little shadow of its old self. The meeting strongly condemned the resolutions asking him to resign. Mr. Morton has cheek enough to hold on to an "absorption," that some one of these organizations would have seen what could be done in the way of "convention," that some one of these organizations would have seen what could be done in the way of "convention."
FROM A. C. BIRD, HOLLAND.

Absolutely all of the old clover in this district has been attacked by the beetle this season. Not five per cent of the young clover stands living, owing to the great injury done by the creature. We have had two very severe attacks of this pest during the past two years, and most of the farmers have been compelled to fall back on hay for winter. There will be a considerable acreage left as winter feed this year, enough to prevent a shortage. We are all glad to have as much as possible to clover this spring.

FROM M. BRADSHAW, ADRIAN.

The clover root borer has been noticed almost every field, and reports and observations indicate that this pest is not confined to one or two counties, but is all over the country. On dry soils and in dry seasons the cloves are attacked more than in the more moist soil. It is in full habit of the second season's growth. The root borers do not eat the clover plant, but may destroy the small roots and young sprouts of the clover. When the root is pulled out of the soil, the larvae will emerge from under the clover, and can be found at this time of year. The beetle riddles the larger part of the main root and can be found in the live roots. It is easy to see the beetles and they are not numerous.

The replies appear below. We also wrote to our agents in various parts of the state, asking them concerning the condition of the various crops, and the replies are also given below. We should like to hear from everybody who has made a report.

This insect has been working more or less in Michigan for six or eight years. In the second year it became evident that the clover was being destroyed. Some farmers in various parts of the state, making inquiries of their neighbors, discovered that their clover was being eaten, and now that clover has been eaten by this insect. In the last two or three years it has been attacked, but not as a widespread pest. It seems to have been working more and more in the northern part of the state, and can be found at this time of year. The beetle riddles the larger part of the main root and can be found in the live roots.

One of the finest fields of clover it has ever been my privilege to see is owned by Mr. S. P. Bird, of Michigan, and has been entirely killed by the beetle. The clover stubble ridges the large part of the main root, often leaving a channel in the center of the root. It has been noticed in various parts of New York where this insect has been observed, and it is noticeable in Michigan, and perhaps in other states as well as in New York, that there is but little root stubble the as it has been found useless to leave the stubble.

One of the many unsolved questions is whether the clover and the insect which attacks it is any inherent in the soil, or can be handled with what we do in Michigan, and other states. It has been noticed in various parts of New York where this insect has been observed, and it is noticeable in Michigan, and perhaps in other states as well as in New York, that there is but little root stubble the as it has been found useless to leave the stubble.

**WORKMEN'S SOCIETY.**

The Minutes of the recent meeting include the following items:

- "We would like something for ourselves, some subjects upon which the sisters can talk.
- "The breath of the rich narcissus waxen pale, time in every Grange meeting as the broth-" (interrupted)
- "it proved to be a humorous take off on the..."
- "This is a magic surprising, a mystery..."
- "There is a problem, a wonder for all to see."
- "If so, how?"
- "Almost every man has his ideas on tariff..."
- "That grants to the grape-vine juice that can madden..."
- "That says why I overheard him discussing that..."
- "There is a problem, a wonder for all to see."
- "If so, how?"
- "The breath of the rich narcissus waxen pale, time in every Grange meeting as the broth-" (interrupted)

- "That says why I overheard him discussing that..."
The agricultural colleges and experiment stations are in the habit of publishing reports of their work. These reports can be obtained through the following organizations:

1. Agricultural Experiment Stations
2. United States Department of Agriculture
3. State Agricultural Colleges

These reports detail the work of these institutions, including research findings, experimental results, and educational programs. They are valuable resources for anyone interested in agriculture and related fields.
The Grange, as an educational institution, is of great importance in promoting the welfare of our people. It is designed to impart knowledge and skill in agriculture, homemaking, and other useful arts. Its Workis conducted through local and state branches, and is open to all who wish to become members.

I. The Grange and School Institutions.

The Grange has a large number of educational branches, such as the Agricultural Department, which provides instruction in agriculture, horticulture, and related subjects. The Grange also has a Home Economics Department, which teaches homemaking skills and provides practical demonstrations in cooking, sewing, and other household activities.

II. The Grange and Business Enterprises.

The Grange has been involved in various business enterprises, such as the Grange Mutual Insurance Company, which provides insurance coverage for Grange members. The Grange also has its own publishing company, which produces books and other educational materials.

III. The Grange and Politics.

The Grange has been involved in politics, and has supported various political candidates, such as Woodrow Wilson, who was a strong supporter of the Grange.

IV. The Grange and Religion.

The Grange has supported various religious organizations, such as the Church of the Nazarene, and has sponsored religious services and events.

V. The Grange and Social Issues.

The Grange has been involved in social issues, such as the women's suffrage movement, and has supported various social reforms.

VI. The Grange and Arts and Culture.

The Grange has supported various arts and cultural organizations, such as the Grange Opera and the Grange Symphony Orchestra, and has sponsored various musical events.

VII. The Grange and Community Service.

The Grange has been involved in community service, such as providing food and clothing to those in need, and has sponsored various community events.

VIII. The Grange and International Relations.

The Grange has been involved in international relations, such as the Grange's support of the League of Nations, and has sponsored various international events.

IX. The Grange and Future Directions.

The Grange is looking to the future, and is exploring new ways to support its members and promote its mission. The Grange is committed to continuing its work, and will continue to be a strong and influential force in the community.

The Grange is proud of its past, and will continue to work towards a brighter future.

The Grange Visitor.
MICHIGAN STOCK BREEDERS.

All those who wish to purchase pure-bred stock are invited to correspond with some of the following well known breeders.

H. H. HINDS

BREEDS,

OF THE MICHIGAN COLLEGE

Ram Boer Ram.

We quote the following, from letter by Prof. C. D. Smith to the Boer Ram.

"It is, therefore, I believe, a fact which some farmers may have overlooked, that a calf of the dirt breed is apt to gain steadily, and to have a healthy constitution, as it grows up.

"In feeding the stock, however, I have always advocated the rule which I think every breeder should adopt, that of feeding as much as the animals will eat, and keeping an appetite for feeding, for the reason that this is an economical and efficient method of feeding."

The Amish are a hardy race of people who are adapted to all soils and all work for which a man can be hired. They are thoroughly characterized by their good character and their industry. They are also noted for their simplicity and their economy in all things.

The GRAING VISITORE.

AUGUST 3, 1914.

INGRAM FORBES.

Ingham county, Provinces No. 14, and while Michigan State Grange, March 31st, met at Owosso, and the most notable event of the day was the re-nomination of the St. Lawrence Co. candidate for delegate to the Sixth National Grange Convention.

The occasion was the one who created it either by cornerstones or by the simple fact that it was there. The members of the Order in the county are doing their part to make the most of what we have.

The degree of Pythons was conferred on a class of seven in full regalia.

Saturday morning there was a meeting of the members at the Troy Grange, followed by a public Social in the evening.

The leaders of the Order in the county who have been instrumental in the growth and development of the society are the ones who have been present at the special meetings.

In the evening we met and the grand evening was closed by a special meeting of the members.

The proposition of the Order in this county will tend to the growth of the Order and make the most of what we have.
