Tenant or Vested. 

Walter Berry, of the Associated Grange Interests of the United States, in a recent address at Cortland, New York, says:

"It is a new and important principle of law that will stimulate an increase in the number of Grange orders in the coming year. The principle is that a person who has paid for a Grange order and has not received it is entitled to a refund. The principle is based on the idea that a person who has paid for a Grange order is entitled to receive it, and that if he does not receive it, he is entitled to a refund. The principle is a great advance in the law of Grange orders, and it is expected to have a great effect on the number of orders that will be sold in the coming year."
Colic in Horses.

JOHN. F. BUTTON.

Colic is a disease of the horse, which is very serious and at times almost fatal. It is caused by the inflammation of the stomach or intestines, and is accompanied by pain, distress, and sometimes death. The disease is very common in horses, and is caused by several different things, as the ingestion of bad feed, the drinking of cold water, or the sudden change of the climate. The symptoms of the disease are very obvious, and are easily noticed by any one who has a horse. The symptoms are: The horse becomes restless, his eyes are red and hollow, his mouth is open, and his breath is rapid. The horse may also vomit, and his abdomen may be distended. In some cases, the horse may die very soon after the symptoms appear.

The treatment of colic is very important, and should be done as soon as possible. The first thing to do is to stop the horse from eating and drinking. The next thing is to give the horse a laxative, such as castor oil or cascara sagrada. The horse should also be given a warm bath, and a blister may be applied to the horse's back. The horse should also be given a warm compress on his back, and a small quantity of brandy may be given him. In some cases, the horse may be given a mixture of aloes and syrup of spirits of wine.

In some cases, the horse may die very soon after the treatment is given. In other cases, the horse may get well if the treatment is done properly. The horse should be kept in a quiet place, and should be given plenty of fresh air. The horse should also be given plenty of water, and should be kept warm. The horse should also be given a quiet place to rest, and should be kept in a comfortable bed.

The horse should also be given a warm compress on his back, and a small quantity of brandy may be given him. In some cases, the horse may die very soon after the treatment is given. In other cases, the horse may get well if the treatment is done properly. The horse should be kept in a quiet place, and should be given plenty of fresh air. The horse should also be given plenty of water, and should be kept warm. The horse should also be given a quiet place to rest, and should be kept in a comfortable bed.

**The Child.**

FLORENCE TINSLEY.

There, those mortality are at least in the grave where they died. The clouds may seem to go to them at first, but only because the earth is beneath them. The seed was planted in the box. April 18, 1895.

To do this they must be vigorous, well-drilled, potted up, and cultivated in a sun-shining, well-ventilated garden. The flowers must not be expanded in leaves, so that they may set hills for later. April 17, 1895.

**Notes for the Garden.**

These rose, bright morning-roses, one real rose-plant is fully grown. A real rose-plant will grow to be the flower of the bed. April 18, 1895.

The name was Esther. With Malcolm's Scotch accent, the house was neat and clean, and the meals were abundant and wholesome. April 18, 1895.

When Count Cavour wished to strengthen his nation, he worked hard to bring about a change in Italy. April 18, 1895.

"One who has a partially shaded spot, with his own time, can plant roses and grow them without difficulty. April 18, 1895.

"Peaches on the Brain." 1895.

The object to be sought is quitted on the ground of attention and preference, because of its own strength and beauty. April 18, 1895.

**The Younger.**

A Pair of Deer.

When I met them at the meeting I heard the happy story of the little ones. April 18, 1895.

When the Master gardener called to order the old Grange, the attendance was not as large as usual, but the meeting was very lively. April 18, 1895.

If one has a partially shaded spot, with its own time, can plant roses and grow them without difficulty. April 18, 1895.

"Peaches on the Brain." 1895.
OUR WORK.

The following is a list of the most important points on which the work of the Grange was carried forward during the past year:

1. National Grange Library.
2. Local Grange Library.
5. Grange Educational Bureau.
6. Grange Industrial Institute.
7. Grange Agricultural Bureau.
8. Grange Political Bureau.

THE UNIVERSITY APPROPRIATION.

The managers of the Visseron are very pleased with the little contests so far had been held, and they hope to have one more. The Visseron brought together a great number of people, and there is a good deal of interest in the results. The following is the list of results:

1. The Visseron Library.
2. The Grange Library.
3. The Farmer's Library.
4. The School Library.
5. The Industrial Library.

In the second place, the Grange is the most important organization of the state, and the only one that can do any good in large numbers. We believe that this improvement can in large measure be brought about:

(a.) By encouraging the formation of libraries and reading rooms in every county.
(b.) By providing funds for the support of libraries.
(c.) By promoting the study of agriculture and mechanics.

THE GRANGE VISITOR.

The conditions associated with the farm are not necessarily prevalent in time. The factors which encourage this condition are not likely to alter substantially the area of farm operations. In the main, however, the farmers of all countries will be in a position to determine the level of the farm economy through the efficient operation of the farm.

We must consider the price of the farm product as the primary factor to the farmer. The price of the farm product is determined by the interaction of supply and demand. In the main, the supply of the farm product is determined by the area of farm operations. The demand for the farm product is determined by the purchasing power of the consumer. The purchasing power of the consumer is determined by the income of the consumer. The income of the consumer is determined by the productivity of the farm.

The productivity of the farm is determined by the efficiency of the farm operation. The efficiency of the farm operation is determined by the capital invested in the farm and the labor employed in the farm operation. The capital invested in the farm is determined by the financial resources of the farmer. The labor employed in the farm operation is determined by the labor force available to the farmer.

The capital invested in the farm is determined by the savings of the farmer. The savings of the farmer are determined by the income of the farmer. The labor force available to the farmer is determined by the population of the area.

The capital invested in the farm is determined by the financial resources of the farmer. The financial resources of the farmer are determined by the income of the farmer. The income of the farmer is determined by the productivity of the farm.

The labor force available to the farmer is determined by the population of the area. The population of the area is determined by the birth rate, death rate, and migration.

The birth rate is determined by the fertility of the women. The fertility of the women is determined by the age of the women and the use of contraceptives.

The death rate is determined by the prevalence of disease. The prevalence of disease is determined by the sanitation of the area.

The migration is determined by the economic conditions of the area. The economic conditions of the area are determined by the productivity of the farm and the price of the farm product.

Farm ing in Florida.

The strawberry is a fruit which has been much cultivated in some sections of Florida, and its increased attention is being given it. In order to avail ourselves of the very early

season, it is necessary to plant the June strain two weeks earlier than the strawberry which is ready to be shipped the last of May. At this time, to the markets of Wash-ington, the strawberry does not come to this

state until the first week in June. In addition to the

crispy and tender leaves, the strawberry plant is very

tender, and great care must be exercised in

planting and cultivating the fruit. The

season is a great advantage to the

strawberry industry, as they will

be harvested before many other fruits are

ready for the market.

THE GRANGE VISITOR.

Ear ly Crops.

With such a climate as this the possibilities in the line of agricul-
ture are nearly endless, and the grower who

will take the time to study the various

varieties and the best methods of cultivation can

produce crops which will be of great value.

Much attention is turned in this di-

rection, and the southern states are making

great progress in this line.

Sugar Cane.

In the southern states the sugar

cane is a staple crop, and is

grown in great quantities. The

cane is harvested in the fall,

and the sugar is refined in the

winter.

Sugarcane has been grown in Florida for some time,

and the results have been satisfactory.

The climate of the state is

usually satisfactory to the grow-

ers, and the sugar is refined in

the winter.

Sugarcane is a crop which

requires a great deal of labor,

and the sugar is refined in the

winter.

Sugarcane has been grown in Florida for some time,

and the results have been satisfactory.

Grange News.

Capital Grange No. 359, at the meeting of May 16, entertained 350 guests consisting of all officers of the county, and a large number of members. The members who failed to keep their oath on taking the pledge, were given another chance to correct it, and they have been received in good standing.

Farm in Florida.

For many years the principal agricultural industry in Florida has been the growth of oranges. The orange groves are found almost in every part of the state, and the oranges are sent to market all the year round. The climate of the state is warm and fertile, and the soil is well adapted to the growth of this fruit. The oranges are grown in large groves, and are exported to many countries. The returns which are given to the growers are excellent, and the work has been admirably carried on.

The 5000 Best Books.

If a person wishes to purchase a book to fill in a leisure time, which will be of use to the person in the future, a list of the 5000 best books is given in the Journal. This list is compiled by a committee of learned men, and is considered to be a valuable guide to a wise selection of books that will be of use to the person in the future.
