CEDAR WAXWING
(Bombycilla cedrorum)

The title, “neatest of all birds,” suits the Cedar Waxwing beautifully. Its pert little crest gives it the appearance of always having just combed its hair. They are very affectionate birds and often are seen sitting side by side on telegraph wires, rubbing their bills together. The food consists of cedar and other berries but is compensated for by the quantities of injurious insects destroyed. Four or five eggs, bluish-white and speckled with black, are laid in a compact nest in trees. The note is a very soft whistling sound. Breeding Range: Alaska to Virginia and Missouri. Winters throughout the United States and Mexico.

FOR THE GOOD OF ALL,
DO NOT DESTROY THE BIRDS.
MILK BOTTLES — Pour a tablespoonful ARM & HAMMER or COW BRAND BAKING SODA into the bottle. Half fill bottle with warm water and shake vigorously. If the milk is dried on, let bottle soak for a few minutes. ARM & HAMMER or COW BRAND BAKING SODA not only hastens the cleaning process but sweetens the bottle. Rinse with clear water and let dry.

RED-BREASTED NUTHATCH
(Sitta canadensis)
This bird is easily distinguished from its larger relative, the White-breasted Nuthatch, by its smaller size, reddish-brown breast, and the black stripe across the face. It is often observed in the company of its fellows. Of coniferous trees it is especially fond, consuming quantities of the seeds of the cones. Like the White-breasted, it extracts many forms of injurious insects and their eggs from the bark of trees. The nest, located in a hole or stump of a tree, is made of grasses and feathers. The four to seven eggs are white, thickly speckled with brown. Range: Breeds in the northern coniferous forests, migrating south irregularly over whole United States.

FOR THE GOOD OF ALL,
DO NOT DESTROY THE BIRDS.
