**IN THE KITCHEN**

The greatest enemies of a clean and spotless kitchen are the greases, soot and grime that ordinary soap will not remove. Most of the unpleasant cleaning tasks in the home can be made easy by the use of the proper washing preparation. It has been found that Sal Soda, otherwise known as Washing Soda, contains chemical properties that are the most effective dissolvers of grease, scale and hard accumulations of foreign matter known. Therefore, we are giving some tested uses of Arm & Hammer Washing Soda for making the hard and disagreeable jobs about the home quick and easy to do.

For washing dishes, place one or two tablespoonfuls of Arm & Hammer Washing Soda in a pan of boiling water. This will quickly cut the grease and make the dishes clean and bright.

For boiling, cleaning and dissolving grease from pots and pans, kettles, porcelain and tinware, sinks, etc., use four or more tablespoonfuls of Arm & Hammer Washing Soda to a dishpan of boiling water.

A handful of Arm & Hammer Washing Soda in a pail of hot water is excellent for washing your kitchen table, wash bowls, waste cans, etc. Also, on the farm, for milk cans, pails, strainers, parts of cream separators, etc. Do not use it on aluminum ware, however, as it may stain it.

For kitchen floors, if they are of wood, no better cleaner can be used than Arm & Hammer Washing Soda. Dissolve one or two handfuls into a pail of water and see how clean and white it makes the floor. Do not use it on printed oilcloth, however, as it will dull the pattern. Arm & Hammer Washing Soda will help to remove the dirt and grease that accumulate in the cracks between the boards of the floor, assuring cleanliness and sanitation. Thoroughly rinse the floors with clear water after scrubbing with the soda solution.

**WASHING CLOTHES**

Having clothes clean and white formerly required long and laborious rubbing. Now, the modern housewife uses science to relieve her of most of the labor. With the advent of the washing machine rapid strides are being made to eliminate the time and toil necessary to produce a line of fresh and spotless clothes. But the one thing that most every housewife has learned to use on wash day is Arm & Hammer Washing Soda. Here’s how they use it:

Where the water is hard, housewives find that the best method of softening it is to dissolve a small quantity of Arm & Hammer Washing Soda (usually one tablespoonful) in a whole boiler full of water, (about ten gallons). For washing and boiling white clothes, add one tablespoonful of Arm & Hammer Washing Soda to about ten gallons of water. Less soap than usual will do an equal amount of work. In addition to saving soap, Arm & Hammer Washing Soda makes the clothes whiter than they would be without it.

To make a bleach and disinfectant, dissolve the contents of one package of Arm & Hammer Washing Soda (2½ lbs.) in one gallon of water. In a separate vessel take three-quarters to one pound of Bleaching Powder, commonly sold as Chloride of Lime. Stir this into one quart of water until it assumes a creamy-like mass, having all the lumps broken and thoroughly mixed. Pour this into the solution of Arm & Hammer Washing Soda made first, stirring all the while until it is thoroughly mixed. Allow this mixture to settle over night. Draw off, or strain through a cloth. Place the clear liquor in a jug or bottle and cork tightly for future use. One cup of this solution added to a boiler full of water (ten gallons) will bleach clothes spotlessly white. With printed goods, where the designs and colors have faded, this solution will entirely remove the color, leaving the garment perfectly white.
FOR THE
BATH ROOM

FOR tiled bath room floors Arm & Hammer Washing Soda is one of the greatest helps in thoroughly scouring and cleansing. It will help to remove the dirt that accumulates in the corners and cracks, and leave the floor white and shining.

For cleaning wash bowls, toilet bowls, bath tubs, etc., use a handful of Arm & Hammer Washing Soda in a bucket of hot water. It is well to throw a little down the drain pipes to carry off any accumulation inside of them. It will not clog up the pipes as it quickly dissolves.

ARM & HAMMER
Washing Soda

Contains no caustic, lye, sand or harmful ingredient. It is the oldest cleanser on the market, having been used in American households for the past seventy years. It is inexpensive and will not deteriorate with age.

Buy it from your grocer.
