The New York Condensed Milk Co. would call attention of the public to the above Brand of Condensed Milk, which, for purity and excellence, has maintained its high reputation for the past 25 years.

It is simply pure milk of the best quality, from which a large percentage of water has been evaporated, combined with the finest grades of refined sugar.

As a food for infants it has no equal.

Four to five parts water to one of Condensed Milk will make rich milk. For coffee and tea use undiluted, for which purpose it surpasses cream. For ice cream, sauces, &c., add one to two parts water to one of Condensed Milk.

For infants—While it would be impossible to give exact directions for the mixing of Condensed Milk for infant's use, as the amount of dilution necessary for a weak or sickly child would not be required for one of ordinary health or strength; experience enables us to give the following general directions, which will be found sufficient for most cases.

1st Month, add 14 to 16 parts water to one part of Eagle Brand Condensed Milk.

2d Month, add 12 to 14 parts water to one part of Eagle Brand Condensed Milk.

3d Month, add 10 to 12 parts water to one part of Eagle Brand Condensed Milk.

Continue to decrease gradually the amount of water as the child grows older, so that at the age of ten to twelve months six to seven parts water to one part of Eagle Brand Condensed Milk may be used. After the twelfth month, add one to two parts water to one of Gail Borden Eagle Brand Condensed Milk.

The water in all cases should be boiled before using, and only such quantities should be mixed at a time as is intended for immediate use.
