HOME MAKERS, it would appear, are in need of a brief, authentic reference book on modern cooking and serving. Though our standards of living are higher today than they ever were, they are simpler, for common sense and the new knowledge about health have shaped them. The lavish, formal table customs of twenty or even ten years ago now seem pretentious and out of date.

With these facts in mind this book has been written. Besides information on nutrition and table service, it contains more than five hundred recipes, all of which were carefully tested before they were permitted a place here. The majority of them call for Crisco—but there are recipes for foods, too, in which no shortening is used, because it is desired that this book shall be a rounded-out cooking guide of the greatest possible value to the average homemaker.

GOOD NEWS OF A GRAND NEW CRISCO

CRISCO is an old friend to most women who have begun housekeeping in the past 25 years. A friend whose familiar blue and white wrapper has been seen in their kitchens for years and is there today—the most popular shortening on the market.

Of course, improvements have been made from time to time in Crisco. But many good cooks don’t realize that today a new kind of Crisco is being made and sold which surpasses anything produced before—a genuinely super-creamed Crisco. This new Crisco has all the fine qualities of the old Crisco plus many new advantages. You will find it now, at your dealers, in the same familiar blue and white wrapped can.

CUTS CREAMING TIME IN HALF

New, super-creamed Crisco has been creamed and blended over and over again at the spotless Crisco factory to make it the lightest, fluffiest shortening ever made. You know what an arm-tiring task it used to be to blend a shortening with the sugar in making a cake. You could stir and stir, and it wasn’t until you were practically worn out that the mixture was ready for the flour and milk.

Suppose it is a whole egg cake you are making. All you have to do is to measure your Crisco and sugar directly into your mixing bowl, break in your eggs—or yolks as the recipe may state—and stir briskly. In less than half a minute you will find the ingredients are thoroughly blended together and ready for the addition of flour and milk. Quite different, isn’t it, from the old method of first creaming up a hard, stiff shortening, then adding the sugar little by little and finally beating in the eggs?

MAKES RICH TENDER PASTRY

You’ll be surprised to find this new super-creamed Crisco mixes so lightly and smoothly, so easily, with flour it gives your pastries a real rich, creamy lightness . . . makes them meltingly tender.
Good cooks are discovering everywhere that pies made with new Crisco are more digestible too. Their tender, flaky light crust, free from sogginess, is the answer.

**CRISP AND GREASELESS FRIED FOODS**

Everyone wants crisp and greaseless fried foods... light and easy to digest. This new super-creamed Crisco won't smoke at proper frying temperatures. It forms a crisp, tender crust on the surface of the food, sealing it instantly, so that no grease can soak in, and the fine delicate flavor of the food itself is preserved. Crisco fried foods are crisp on the outside, tender and well cooked on the inside—really digestible. More and more good cooks are using Crisco for deep frying and pan frying as well as for their cakes.

**FIT FOR DELICATE STOMACHS**

Doctors and nurses as well as some 11,000,000 good cooks and Crisco enthusiasts find that Crisco foods agree with delicate digestions. If you haven't tried the improved new super-creamed Crisco, you can't imagine how light and easy to digest fried foods and pastry can be.

**KEEP IT ON THE PANTRY SHELF**

There is no need to keep Crisco in the refrigerator. It keeps sweet on the pantry shelf, and, kept at room temperature, is always ready for cake or pie making and for frying. Crisco used for frying can be strained and used over and over again.

**TRY NEW CRISCO—SEE FOR YOURSELF**

Naturally, you'll want to find out for yourself just how Crisco has been improved. You'll want to test out the new Crisco in your own kitchen with these recipes. All we ask is that you will give the new Crisco a real trial not only for cakes or pastry, but for cookies, biscuits, fritters, deep fat frying and pan frying—for everything you cook and bake. The 3-lb. can with its lower price per pound, is the economical size to buy.

CHAPTER I

Table Service
in the Servantless House

THREE things a meal must be when you are your own cook and waitress: it must be nourishing, it must be reasonably easy to prepare and it must give your family pleasure in the way it is served.

Since well-bred people avoid display, especially display that is out of keeping with their means, the mistress of the servantless house does not attempt the formalities of table service observed by the Richest-Family-in-Town. The old proverb that advises us to bite off only as much as we can chew applies very aptly to serving. It is a sign of good taste to do only as much as we can do well, and to leave the extreme expressions of style to those who have money and servants to carry them out.

The intelligent woman fits her service to her pocketbook and strength. Certain fundamental rules she observes to the letter, of course, but beyond that she is given a wide latitude to work out her own taste and convenience. She may choose, for instance, to bring broiled chops to the table in a covered earthenware casserole, instead of on the platter which matches her dinner set, but what sane person would find fault with this method when it is the only way of keeping the food piping hot on the long journey from her particular kitchen?

This matter of serving hot foods hot and cold foods cold happens to be one of those fundamental rules which no woman who aspires to be a good housekeeper can make light of. It just has to be done, however it is accomplished.

Quite as hard and fast is the edict about clean linen and shining silver. Better never to use anything but doilies, and keep them immaculately fresh, than to cover the table for even one meal with a cloth having a single spot on it. In many
homes of wealth tablecloths, as a matter of fact, are no longer seen; lace or even linen runners and place mats have supplanted them. This type of linen demands a well-finished table top, of course, either of paint or of natural wood smoothly polished. Probably the latter is the more practical, as hot dishes will not mar it if it is left unvarnished and rubbed down frequently with oil or wax.

Table silver will always be bright if washed in hot suds made with Ivory Soap and dried at once with a soft clean towel. Silver polish should be kept close to the kitchen sink so that stained pieces may be rubbed up after each meal. This plan consumes only a few extra minutes each day, but how it reduces the labor of the weekly silver cleaning!

Just one more adamantine law. Each place, or cover, as one sometimes sees it called, must be carefully set with the knife
at the right of the place plate and the fork at the left. The sharp edge of the knife must be turned toward the plate and the fork must be placed with its prongs pointing upward. The water glass takes its stand about one inch above the point of the knife, while the bread-and-butter plate goes to the opposite side of each place just above the fork. The small butter knife is placed on the bread-and-butter plate, either across the top or the right-hand edge.

This is the skeleton arrangement of a place. Additional silver and glass is added to it according to the meal and the kinds of food to be served, and a napkin always puts in its appearance, sometimes on the plate, at other times to the left of the fork. But these are details which are easily remembered once you understand the reasons for them. And it is high time to discuss them now.

**BREAKFAST**

In most households breakfast, on week days at any rate, is a scramble with everyone coming down at the last minute and wanting to be waited on at once. But it is the meal, too, that starts the day right or wrong for each member of the family
and so you, the homemaker, manage to have the table looking pretty, to wear your most serene manner and to serve food that looks absolutely irresistible.

If the condition of your table top permits, you will use a small breakfast cloth or a runner and place mats, which may be all white or embroidered or woven in gay colors. Their variety is infinite, ranging all the way from an excellent quality of brightly checked gingham to a hand-woven linen embellished with lace and Italian cutwork. The napkins are small, matching the color of the cloth or runner.

For the center of the table a bowl or vase with just a few flowers of the garden variety is better than a tight mass of formal hothouse flowers. Or fruits of several kinds piled together in a bowl make a colorful decoration. When neither fruit nor flowers are available you may devise a charming centerpiece of some tiny ferns combined with a bit of partridge vine or other colored woodsy thing in a low bowl or delicate wicker basket.

At each place is a plate—breakfast size—a knife, fork, bread-and-butter plate, butter knife and a water glass. Here again, you see, is our skeleton place arrangement.

But you are going to have grapefruit or baked apple for your first course. You will need a spoon for it—so lay it at the right of the knife. If you have children you will certainly serve cereal. A dessert spoon is the generally accepted implement for this food. Put it between the knife and fruit spoon. Boiled eggs would necessitate the addition of a teaspoon. This teaspoon would be given the place next to the knife, and the cereal and fruit spoons would be moved to the outside places, since it is considered more convenient for silver to be laid in the order of its use—the fork, spoon or knife for the first course being found on the outside of the row, while the pieces for the last course are on the inside, nearest the plate.

If you pour the coffee at the table, as you probably will want to do, you will lay a teaspoon on each saucer before you pass it.

For breakfast in the house without a maid you will put the fruit course on the table before your family assembles, so as to
save yourself as many steps as possible after the meal has begun. The fruit plate or saucer will be placed on the breakfast plate. And just here the reason becomes perfectly evident as to why the breakfast napkin, neatly folded, must repose at the left of the place, just beside the fork. If it were put on the plate it would be covered by the dish of fruit!

The coffee service is beside your place. An electric percolator is a wonderful possession, permitting, as it does, the coffee to be made on the table. But if one is not so fortunate as to own this convenient device, the coffee is strained in the kitchen into a well-heated china or silver coffee pot and brought to the table.

Toast or hot bread is usually served on a bread tray or in a basket which has been lined with a fresh napkin large enough to fold over the contents and keep them warm.

Alcove breakfasting for the small family is more and more popular as our form of living becomes condensed and simplified, and the breakfast alcove is being added to many new houses and apartments. The alcove is part of, or very close to, the kitchen and it makes the serving of the meal a much easier affair.

The setting of the alcove table is the same as that of the ordinary breakfast table, but one has to beware of crowding. It is well to call into play the tea-wagon or a small table on which the extra things may be placed. The used plates may be put out of sight on the lower shelf of the tea-wagon.

And, by the way, a tea-wagon is one of the best servants the servantless house can have. It may be trained to carry things to and from the kitchen under your guiding hand, or to stand faithfully beside the dining room table holding fresh china and silver for the last course on its upper shelf, and amiably receiving used plates on its concealed under shelf.

With a small family one may vary the breakfast, or the luncheon either, in many ways. The mistress of a perfectly charming little house in the country has a way of surprising her family occasionally by serving breakfast or luncheon on her spotless marble-topped kitchen table, which looks out over an

expanse of green lawn. I shall never forget one breakfast there in her kitchen when I was a week-end guest in the Spring. We had golden popovers and home-made marmalade for breakfast and I looked out upon a glory of white and pink apple blossoms on the wide-spreading apple tree that presses close to the house. The kitchen is as immaculate as a drawing-room and its blue-and-white freshness adds to one’s appetite. To achieve such an effect with a kitchen breakfast one cannot be a cluttery person.

Another homemaker frequently transfers breakfast on a warm day to the side porch with its lovely view of the winding river and the white church spire sailing out of the trees on the opposite bank. All three of her family lend a hand at the carrying and for the extra steps there is a soul-satisfying half-hour of matchless peace and beauty.

ENTERTAINING AT BREAKFAST

When there are guests for breakfast one may add a few special touches as a tribute to the festive occasion. Dressing up the fruit by serving it in baskets made of the shell of the grapefruit
or orange, or scooping melon out in balls and serving it in sherbet glasses, or laying a handful of luscious red strawberries on a bed of fresh grape or nasturtium leaves, enlivens the first course; while eggs baked in individual casseroles or an omelette garnished with parsley or mushrooms give a "company" air to a quite simple meal.

More and more it is becoming a custom when one has guests to serve breakfast on a tray either in the bed-room or downstairs—in winter, before an open fire, in summer, on the porch. It gives a guest—usually it is a woman who welcomes this pleasant little courtesy—a bit more freedom about her hour of waking and in the end it is much more convenient for the hostess, permitting her to send her family off about their day's work and to get her own duties well under way.

There are all sorts of alluring breakfast sets, costly and inexpensive, but the important point is that everything should match and that the tray should not be a conglomeration of odd bits of china. One needs, of course, a small cream pitcher and sugar bowl, a covered dish for toast, a tall glass for orange juice, which is preferable to the orange served whole, or an individual fruit dish and a small tea or coffee pot. A very small vase with one flower is a touch that completes the tray breakfast, the keynote of which should be daintiness.

THE FAMILY LUNCHEON

The homemaker who from choice or necessity serves dinner at night has need of all her ingenuity in making the mid-day luncheon an inspiring meal. Nearly always there are leftovers to be used up and only a woman with a glowing imagination and the true housekeeping instinct can make them look and taste enticing.

Everything must be done to make the luncheon table attractive. There should always be a pretty centerpiece and, as at breakfast, the low bowl with a few flowers in a holder in the Japanese fashion or a bowl of gaily assorted fruit is better than the more pretentious centerpiece. In one household where the mistress "can make anything grow" a succession of tulips,
The informal type of table covering is the only correct thing for luncheon and no end of variety is possible. Pretty luncheon cloths or sets of runners are being made now of all sorts of materials besides linen—of checked gingham, or of a fine quality crepe or even of closely woven straw and grass.

The table is set with the silver necessary to the meal. If soup or bouillon in cups is the first course, the bouillon spoon will be placed at the right of the knife, just as the fruit spoon was for breakfast. The salad fork, if needed, will occupy the place immediately to the left of the plate, with the meat fork beyond it, following the rule that the last piece to be used shall be nearest the plate.

donfodils and narcissi is kept blooming indoors throughout the winter and the vivid blossoms in a deep-toned blue or an ivory bowl make a lovely bit of color in the center of the table when all the world outside is gray.

The salad fork, if needed, will occupy the place immediately to the left of the plate, with the meat fork beyond it, following the rule that the last piece to be used shall be nearest the plate.
If layer cake or pie happens to be the dessert, an extra fork will be required and this may either be placed before each person just before the dessert is served or it may be put on the table in the beginning, in which case it will take up its position next the plate, causing the salad and meat forks to be shifted to the left. Theoretically, silver for the last course is not supposed to be placed on the table until the time comes to serve that course, but such a ruling is very sensibly modified for the maidless house.

Comfortingly enough, it is no great blunder, either, to serve soup in plates at an informal family luncheon, though for a formal one only cups with double handles (bouillon cups) would be possible. Soup in plates demands a soup spoon, of course, so place it to the right of the meat knife and omit the bouillon spoon.

When the family assembles, the soup will be at each place, in plates as hot as they can be made, or in summer icy cold cantaloupe or fruit cocktail will substitute for it. If there is no introductory dish, then the main course will be on the table so that the housewife may sit down with the rest of the family and stay seated. If the dessert is one that does not need to be
The formal dinner napkin may be of heavy damask with embroidered initials or monogram, or, if a fancy cloth is being used, the napkin should match the cloth. For breakfast and luncheon, the napkins are smaller as also are those used for the informal, or family, dinner. For afternoon tea a simple Madeira or jet lace-edged napkin not much larger than a handkerchief is in good taste.
kept hot it should be placed on the serving table or tea-wagon before the meal begins and served from there.

Where there are small children requiring something different from the regular menu, it is a good plan to supply their plates in the kitchen and bring them in ready for immediate consumption, so saving the children’s patience and one’s own steps.

In some households there are children of an age sufficiently dependable to be trained as waitresses (or butlers). A wise mother will encourage her girls and boys to assume this share of the family responsibilities, and will cultivate their pride in doing their task well and in saving her so many steps.

**ENTERTAINING AT LUNCHEON**

There is no happier way of entertaining one’s women friends than at luncheon. (Men, as a rule, are not devotees of this pleasant indoor sport.)

Naturally if one has no maid one does not attempt a luncheon on a very large scale, although in nearly every community it is possible to draft for the occasional gala meal a helper who will either stay in the kitchen or help out as waitress. But let us suppose the worst; no “accommodator” is available, and you, in your one person, must perform in the triple role of cook-waitress-hostess.

The first consideration is to choose a menu that will be as delightful as possible without presenting undue complications in serving. Dishes with “trailers” or sauces, gravies and condiments must be sternly foregone, but a simplified service does not mean that the food cannot be both delicious and interesting. When you next contemplate a luncheon you will find the menu on page 232 helpful, since it purposely avoids the pitfalls not foreseen by the unwary.

It goes without saying that you will do all your marketing and as much preparation of the food as is possible on the day before the party.

For a formal luncheon the table is spread with the handsomest luncheon cloth, or runners and place mats, or center-

piece and doilies that the hostess possesses. (A large white damask cloth is suitable only for dinner.) A handsome bowl or vase in the center holds some of the more delicate varieties of garden or hothouse flowers arranged loosely, their stems cut at uneven lengths, so that the effect is of grace and fragility rather than of the profuse costliness which fairly shrieks at one's guests: "count-me-there-are-two-dozen-of-me."

If the table is very long and narrow it may be necessary to place two smaller bowls of the same flowers between the central bowl and the ends of the table. Or if the table is large and square you may want as many as four small vases ranged around the bigger one. Small dishes, or compotes, of salted nuts and candy complete the table decorations and it is needless to say that these compotes must be placed on the table in positions symmetrically related to the centerpiece and to each other, not plumped down anywhere with irregular intervals between them.

For a small luncheon there is no real need of place cards, but you may choose to have them because of the festive touch they give. Where to put them depends upon the type of card you choose. The most conservative card is a small plain white oblong which is placed on top of the folded napkin at the left side of each place. But there are others which are designed to cling to the edge of the water glass or to the individual container for salted nuts. The most important point to remember in the choice of your place cards is that if decorated they must harmonize with your general color scheme.

In entertaining either at luncheon or dinner it is the better part of wisdom not to string out the silver in a bewildering row at each place but to have the dessert spoons brought on when the last course is served. Put all extra silver on the serving table or tea-wagon in advance of the luncheon.

When your guests come into the dining-room they find the first course on the service plates, half a grapefruit, melon, a cocktail or bouillon. When they are ready for the next course you will rise quietly, remove the used plates but not the service plates and carry them two at a time into the kitchen or pantry.
From the last trip you will return with hot plates for the main course. Long before the luncheon you will have arranged with one of your guests, probably an intimate friend, to be a sort of assistant hostess, and so you have given her the place opposite your own at the other end of the table. Now you take away her service plate and put the hot plates in front of her. Then you bring on the main dish and place it before her to serve.

While she is performing this duty you are free to refill the glasses and gather up each service plate as it is replaced by the hot plate. If there are vegetables to be passed, try to have one of the two-compartment dishes which may be bought either in china or Sheffield Plate. They make serving wonderfully expeditious.

When your guests have been supplied with meat and vegetables you will be free to sit down. A plate or small basket of bread may be passed from hand to hand around the table as it is needed, and jelly, nuts and relish may fare likewise.

At the end of this course you will remove the used plates, taking one in each hand, but never piling them. Strict etiquette demands that you replace the used plate with a fresh service plate which would give way in a moment to the salad plate. But in a servantless house such a plan is not practical and, therefore, the place in front of each guest will be bereft of a plate for a few moments until you can fill it again with the salad plate.

If tea or chocolate is to be served it is probably more successful for the hostess to pour it at the table from the prettiest service she can beg, borrow or buy, rather than to bring it in from the kitchen in cups.

Finger bowls with a doily beneath are brought in on dessert plates. Each guest lifts the finger bowl, together with the doily, and places it on the table at her left, leaving the plate ready for the dessert. This may be ice cream in sherbet glasses brought in from the kitchen on a small tray, or it may be a delicate custard of some sort served by the hostess in glass saucers at the table, or an especially delicious tart or cake may
A few of the many good designs to be found in the higher grades of china. From left to right: a handsome service plate for the formal dinner; a plain gold band design in Lenox china; a pleasing pattern in English china; a tea plate in solid color with center decoration.

In less expensive china or ware it is always safe for the housewife to choose of fine old patterns which have stood the test of time.

In excellent taste are these attractive flower and fruit holders of Spanish ware, white Wedgwood, silver, opalescent glass and Italian pottery.
Nothing so contributes to a pleasant dinner hour as a pretty table. The centerpiece may be a little more elaborate than for luncheon. The cloth is smooth and spotless be the ending to the luncheon—this last would be served on the dessert plates, of course.

THE FAMILY DINNER

The family dinner should be the clearing house for the best of the day's experiences of each member of the family. Dinner should be a relaxing meal, an end of the day affair to which each person contributes his most cheerful and amusing "yarns." On no account must it be the place where the day's troubles and disappointments are unloaded.

A pretty table is the first requirement for a pleasant dinner hour. The centerpiece may be a little more elaborate than for luncheon. The cloth is smooth and spotless—of white damask that reaches almost to the floor—and a thick white "silence" cloth is stretched smoothly under it. (Runners and place mats
of linen or lace are also suitable.) Candles, which should never be used for luncheon, are perfect for dinner, casting a golden, flattering glow on objects and people. Such little touches as these make dinner a ceremony which warms the soul to think about all day.

For the rest, everything is much as it is at luncheon. While at a formal dinner you would not use the small bread-and-butter plate you would, no doubt, have difficulty in making your family subscribe to this principle when they are alone. So by all means let them have this very wholesome food and the equipment necessary to its use. A detail photograph of a correctly set dinner place is shown below.

The carving will, of course, be done on the table and in many households the homemaker will do well to see that the carver does not give all the choicest pieces to the rest of the family while keeping the toughest, least attractive scraps for himself. Not infrequently fathers are quite as unselfish as mothers!

Vegetables may be kept hot in covered dishes during the meal. Just before dessert is placed on the table all salt and pepper holders, bread-and-butter plates and condiment dishes

are removed, the cloth is crumbed with a folded napkin and plate, and the water glasses are refilled.

**ENTERTAINING AT DINNER**

To the woman with no maid entertaining at dinner is the very ultimate test of skill. Where more than two guests are added to the usual family it is wise to have some help if it can be obtained, but without help it is possible to achieve a successful dinner by careful planning. There is much that may be done in the morning to clear the tracks and keep the last hours from being rushed.

The dessert may nearly always be prepared in advance; if it is to be ice cream from a caterer it is even more easily disposed of. The vegetables may be cleaned and partly prepared in the morning, the salad washed and put on ice, salad dressing made, often the soup may be made and reheated just before the meal. The dishes may all be wiped and laid out and a working plan fully organized so that the hostess may face the dinner hour calmly.

For her table she uses her best linen cloth and her best embroidered napkins. The centerpiece is a handsome silver or porcelain vase or a fragile affair of engraved or colored glass. Flowers may be arranged in it by mid-afternoon, and they must harmonize in color with the decorations of the dinner china and dining-room. Four single candlesticks or two candelabra will supply all the light that is needed on the table.

Salted nuts and candies are in small dishes placed at orderly intervals on the cloth. Each place is laid at an exactly equal distance from the adjoining places, for here, too, order is the first law.

On the serving table extra plates, finger-bowls and water pitcher are all set out, the last two to be filled just before dinner is announced.

When the guests enter the dining-room they find the first course on the table. For the hostess without a maid the best choice for a first course is probably a cold food like fruit,
Sherbet or cocktail glasses, long or short stemmed, in crystal or colored glass are in good taste. Salad and dessert plates, finger bowls, candlesticks and other pieces of glassware should match in color and design.

There is an infinite variety of stemmed goblets, tumblers and iced tea glasses in both crystal and colored glass. There are also long and short stemmed compotes for candies and salted nuts.
oysters or an hors d'oeuvre, since none of these will lose any of its palatability during the slight delay which occurs while the guests find their places. The plate on which the first course is served rests on the service plate and the napkin (folded as in the illustration on page 17) lies at the left of the place.

The wise hostess plans a menu that requires the minimum of passing. Vegetables are a part of some meat dishes, as chicken casserole, but when they must be passed separately the two or three compartment dish will be found of the greatest help. It should be presented to each guest from his left side and he should be allowed to help himself.

For the dinner of small proportions it is both pleasant and convenient to serve the coffee in the living-room. The host may take the coffee things in on a tray on which the cups and saucers and sugar bowl have been arranged in advance. It is a pleasant final ceremony, especially if there is a big wood fire around which everyone can gather.

**AFTERNOON TEA**

For the woman without a maid no form of entertaining is more practical than the gathering together of two or three choice friends over a cup of tea. It involves no wear and tear of preparation, she can express her very innermost yearnings of daintiness and it comes at the most leisurely hour of the day.

Everywhere afternoon tea is wedging into popularity—with hot tea served in the winter and iced beverages in the summer. It calls for the simplest accompanying dainties if you invite only two or three friends, and if you have no maid you won’t attempt more than eight or ten guests even in your most expansive mood. For such an occasion you will press a close friend into service to help with the passing and replenishing of the tea cups.

The more intimate and individual an afternoon tea, the more delightful it is. Mrs. Armington, who is one-fourth American and three-fourths English, always brings her pot of tea from the kitchen with the tea all brewed—a special blend of her own, by the way—and serves with it nothing but the crispest, thin-
nest pieces of buttered toast and delicious home-made jam. Everything is so perfect that one would never think of wanting anything else—which is as well, since it is all she ever serves. Needless to say she rarely invites more than four guests at once for the very first mandate of tea is that a guest shall have a real chance to chat with her hostess.

Everything that one has for tea, unless it is toast, usually may be prepared ahead so that there is no need for flutter. Ordinarily it seems simpler to bring the hot water in from the kitchen and coax it to a final boil in an alcohol or electric kettle. If you have inherited or been presented with a silver service you are fortunate, but a samovar or a copper kettle serves splendidly. You have out, of course, your most delicate cups and saucers, a pretty white tea-cloth covers the tea table,
and the cream pitcher, sugar bowl, plates, small napkins, a
strainer, a tea caddy and teaspoons complete the list of inedible
necessities.

A tea wagon is invaluable in saving steps but a prettily
arranged tray on a small firm table looks really more interest-
ing. If you own a nest of small tables, distribute them among
your guests, keeping the largest one for the tea tray.

In summer, tea on the porch is very much the same, except
that iced tea or punch is served. The preparation of the
beverage necessarily takes place behind the scenes where the
ice may be cracked and the tea or ginger ale or grape juice poured
in. Then everything is brought in on a tray, the beady pitcher
sprigged with mint, the cakes and sandwiches. It is a little
more of a ready-made affair, but it gives the hostess that much
more freedom once she settles herself with the tray. The
iced drink is a peculiarly American development, and conse-
quently being without old-world traditions almost any variation
and accompaniment that one likes is correct.

**SUNDAY NIGHT SUPPER**

The very term, “Sunday night supper” has a special flavor
of its own. Immediately it conjures up freedom from the usual
routine. Often the man of the family who has secret yearnings
to cook has his chance on Sunday night, and turns out something
staggering to the imagination of the family. One nationally
known literary man has made almost as much of a reputation
among his intimate friends for his Welsh rarebit as for his novels
of contemporary life. Almost anything is likely to go into the
making of it, while his wife stands by in apprehension. But the
result without fail is delightful.

In no way can a family more truly express hospitality than
by giving a standing invitation to their friends to “drop in” for
Sunday night supper. Especially can the family without a
maid entertain easily in this way, making the Sunday evening
at home an occasion of real delight to their friends.
For the dinner of small proportions it is both pleasant and convenient to serve coffee in the living room. The host can carry the coffee things in on a tray on which everything but the coffee has been arranged in advance.

The dining table should be prettily set and lighted with candles. If there are a number of guests it is best to serve the meal "buffet" style—that is, the food is placed on the table, the guests help themselves and carry off their plates to small tables (card tables with luncheon cloths will do) scattered through the dining room and possibly the living room.

The fare usually consists of cold meat, salad, a hot food prepared in the chafing dish, or scalloped potatoes, or Boston baked beans or spaghetti with a wonderful Italian sauce, brought very hot from the kitchen. Tea and coffee are available and there are lots of hot rolls or biscuits. The dessert may be layer cake or cream puffs or delicate home-made tarts. Someone, usually the host or hostess, replenishes the hot dish and biscuits from time to time, but with this exception very little service is necessary. It is an easy and a delightful way to gather together a number of friends who "mix" well.

If the guests are few on Sunday night the dining table will be set just as it is for luncheon and everyone will sit down at a regular place.
CHAPTER II

Table Service
in the House with a Servant

THE house with a maid! What delectable pictures of faultless service it conjures up to the young housekeeper not yet saddened by experience. But the older homemaker is deceived by no such illusions. Rare indeed is the perfect maid; if she exists our friends are the lucky possessors, and such as fall to our lot need training and endless encouragement.

But one can transform an untidy, inexperienced girl into a well-groomed, professional servant if one is patient and kind and fair. She will never be able to accomplish the work of three people—nor even as much as one, if that one happens to be her mistress, all of whose love and interest are naturally enough centered upon the household.

Any maid worth having wants to look her best in the dining-room and to wait on table properly. She should be supplied with well-fitting uniforms of washable cotton for the morning, of black or gray material for the evening, with plenty of white aprons and collars and cuffs.

There are two distinct forms of serving a meal. That which has gradually gained favor in this country is the Russian style by which everything is brought in from the kitchen and presented to each person at the table, who serves himself. The dish is then carried to the serving table or pantry until wanted again. Except in homes where there is more than one servant or where the family is very small a compromise is usually effected between this and the second form of serving where the roast, bread, celery and any other small dishes are placed upon the table. Vegetable dishes are presented at the left and all plates are set down and removed from the right. The maid
The correctly dressed maid wears this finely striped percale uniform in the morning (green, pink or blue) with collar, cuffs and large apron of white cambric. In the afternoon and evening she appears in this attractive uniform of suede-rayon (black, gray, deep blue or maroon) with dainty collar, cuffs and apron of patterned organdie.
holds a dish on the palm of her left hand, with a folded napkin beneath it.

Where there is but one maid several small dishes, such as olives, celery and sauces, may be passed at one time on a tray. A meal must be served without long pauses and it is better to compromise with the formal code of serving than to go through the agony of seeing the last relative or guest supplied just as the first one finishes.

THE FORMAL LUNCHEON

The setting of a luncheon table is very much the same whether one has a maid or not, charm being the object rather than ceremoniousness. The table can be colorful in its appointments and permits of far more individuality than for dinner.

In the last chapter we went into the matter of centerpieces and decorations. If the luncheon is a small affair, one may place upon the table besides the nuts and bonbons, the dishes of relishes and the rolls or bread to be passed by the guests to one another.

Each place is laid with a service plate, the prettiest the hostess has, and with the necessary knives and forks with the single exception of the dessert fork and spoon. A small napkin matching the cloth or runner is folded and laid on the service plate. A bread-and-butter plate with small butter knife is placed at the left side of the place just beyond the forks. Butter may be placed on the plate but, preferably, it is served by the waitress while the guests are eating the first course. The water glass is at the tip of the knife.

The moment the guests are seated the first course is served—soup, oysters or hors d'oeuvre, being placed on the service plate. This plate remains until the main course, when it is removed and a hot plate from the kitchen is substituted. Except when the salad plate is removed and the table is cleared and crumbed in preparation for the dessert course, there is always a plate of some kind before the guest.

With the bringing in of the dessert service, everything is removed from the table except the candies and nuts. The
The dinner party, whether it be a small affair of half a dozen people, or stretches the table to the last limit of extra leaves, will always be the entertainment par excellence in our social calendar.

dessert plates usually have been gotten ready beforehand with the spoon or fork, or both, on them. The finger bowl with doily beneath is always on the dessert plate. One or two small blossoms or flower petals are often seen in the finger bowl.

Luncheon usually consists of not more than four courses and unless there is bridge afterwards it is a short affair, the guests, unless they are intimate friends, making their adieus by three o’clock.

**THE FORMAL DINNER**

The dinner party, whether it be a small affair of half a dozen people, or stretches the table to the last limit of extra leaves and brings out the reserves of the family china and silver, will always be the entertainment par excellence in our social calendar. Served in the glow of candlelight, with men and women
of congenial tastes together, there is a sparkle about it that no other form of entertainment can ever quite rival.

As befitting the more formal meal a dinner expresses a certain stateliness and dignity in its appointments. What guest is not subtly flattered to know that the yellow gleam of candles in the silver candelabra shines upon one's best silver and prized Wedgewood and that the tea roses in the bowl in the center of the table have been especially selected to give him pleasure?

Seat your guests with thought as to which ones “match up” well, plan the best dinner of which your house is capable, and then settle back with a calm mind to contribute the very best of yourself to the great event.

A place at the dinner table is set very much as it is for luncheon except that there is no bread-and-butter plate, that some extra knives or forks are seen and that the napkin is a large one to match the cloth. If there are any other beverages to be served than water, the extra glasses are arranged in a semi-circle to the right of the water glass.
The roast is carved in the kitchen, then skillfully put together again so that its appearance is not harmed. It is then brought in and offered to each guest who serves himself.

All serving dishes are presented at the left side of the person seated. A fork and spoon are needed for convenience.
Vegetables are a part of some meat dishes, as they are in the case of this planked steak, garnished and ready to be carried to the table.

The salad course may be arranged in a pretty salad bowl and passed for each person to help himself.
For a dinner of more than eight it is almost necessary to have two maids and a double service, each dish of food being exactly duplicated. For a small dinner use the divided dish in which two vegetables can be offered at one time. Each dish when it is brought in is passed first to the hostess.

If there are two maids one serves one side of the table and the other the opposite side and usually they vary the ends at which they begin so that one guest is not every time left until the last. At a formal dinner things are passed but once; at a smaller affair they may be passed twice.

How to serve the meat course is entirely a matter for individual choice. If a hostess abides by the letter of the law of fashion the roast is carved in the kitchen, then skillfully put together again so that its appearance is not harmed. It is then brought in and offered to each guest who serves himself. But even with a retinue of servants some households prefer to have the carving done at table, and there is no good reason why this should not be done.

Coffee is usually served in the living-room. In very formal houses the women would leave the men in the dining-room to drink their coffee and to smoke, while they went to the drawing-room for their coffee. (It would have to be called a drawing-room in such a house!) There the men would join them later. But in these informal days comparatively few houses follow this plan.

THE LARGE TEA

The formal reception as a form of entertaining has been relegated to the past along with bustles and hips and ping-pong and has been replaced by the jollier, less formal afternoon tea. This may be of any proportions from the two or three intimates gathered together over a small tea table to the large affair introducing a society bud.

For the larger functions the dining-room table is laid with a pretty cloth, the tea service is at one end, and if men are invited, a service of coffee is surely at the other. (If just women are coming, chocolate might be provided instead.) If the time is
summer, the table is usually out on the veranda or on the lawn, and the tea becomes an even less formal affair.

But for an indoor tea, the shades are drawn and the table is lighted with candles. There is a handsome centerpiece of flowers, and both on the table and the sideboard or buffet are small dishes of various kinds of candies and salted nuts so that a guest may help herself. Dishes of small and delicious sandwiches and cakes are either on the table within easy reach or they are passed by maids or by friends who are assisting.

The tea or coffee service is presided over by an intimate friend of the hostess who usually knows most of the guests and says something agreeable to them as they pause beside her. While there are irreverent men who call this kind of party a "tea-fight" it will always be dear to the hearts of women, who find it an easy as well as a satisfactory way of dispensing hospitality.
Helpful Cooking Equipment

After you have the indispensable "pots and pans" for your kitchen and it's a question of what to add next, do you sometimes wonder what to buy?

Or perhaps you realize that the preparation of food is a lot more trouble than it should be. When you begin to look around for ways and means to make it easier, do you know which of the up-to-date devices save labor?

Or possibly you're a thrifty housewife who doesn't like to see food wasted, and yet that old casserole has been so over-worked the family sighs on seeing it. What you need is a new baking dish or a few individual ones to give those unavoidable left-overs an appearance of exciting novelty.

On the other hand, you may have solved these particular difficulties and want to know just what equipment you will need to add attractive, original touches and tempting garnishes to your dishes. A little "dressing-up" will often make the simplest food a delight to the eyes of your family and friends. For instance, potatoes—most prosaic of foods!—take on a new interest when you cut them with a fancy cutter before frying them; a plain pudding or molded dessert prepared in a fancy mold gains a prestige it never had before; and the most easily made vegetable, meat or fish salad becomes a party dish if a few fancy-cut garnishes of beet, pimento or green pepper are added.

Whatever your problem this chapter will help you. It has many suggestions from the most efficient equipment for deep fat frying to the latest implements for making fancy cake icings and the vegetable garnishes.

This does not mean that you will need them all, but certain of them you will surely want, and a few minutes of "eye" shopping here will save you many hours of wearisome looking in the stores.

FOR PREPARING VEGETABLES AND GARNISHES: Front row, left to right—a Julienne knife for making Julienne potatoes; an egg slicer; two types of slicers for making shoestring or lattice potatoes and potato chips; small scoops for making melon and potato balls; vegetable fork and paring knives. Back row—a Handy slicer for vegetables; a Roller mincer for parsley, onions, etc.; large and small chopping bowls and knives; a rice boiler and potato ricer.

How to Plan Your Meals

DON'T you sometimes wonder what you have to show for the time and thought you spend on the family meals? Three meals a day, seven days a week—on and on, year after year! No business man cares to "plod away" unless his work gains significance, and why should you, you may have thought resentfully. Yet yours more than any other occupation has compensations to offer.

Look at your children's rosy cheeks and happy dispositions; your husband's good health, the general feeling of content and happiness that pervades your home. All these are a result of your thought and planning, and surely they are worth all the energy they cost.

And you have accomplished all this in spite of the bewildering technical information hurled at your devoted head when all you needed to know were a few large embracing facts.

Here they are, then!

The body needs food for these purposes: (1) To build new bone and tissue, (2) to supply energy, (3) to regulate the processes of digestion, elimination, respiration and so forth.

Just which foods are best equipped to do this work are shown in the following table:

Water

Do you see how simple this chart makes menu planning? Be sure to give your family a food from each of these classifications at least once a day if you want them to have a well balanced diet.

An even easier guide to complete nutrition is what is known as the "protective diet." Leading physiological chemists have proven beyond a doubt that a quart of milk, a cooked leafy vegetable and some raw vegetable food in each person's diet each day are a complete protection against under-nourishment.

To make this statement a more practical guide to the planning of meals let's say that everyone should eat twice each day a salad of some uncooked fruits or vegetables, once each day a liberal serving of a cooked green vegetable, and in addition not less than a pint (if possible, a quart) of milk or its equivalent.
The reasons for this choice of foods are several. In the first place, salads contain vitamins in considerable amounts. Most of them also encourage chewing, which helps to keep the teeth in good condition.

The cooked leafy vegetables contain important vitamins, as well as necessary mineral elements.

The milk supplies lime and calcium and other mineral constituents of the body and is rich in the health-producing vitamin A. There are also proteins of high quality. Milk is the only food which can adequately supply certain building material for the growing child.

And, so, if this protective scheme is followed, you can serve whatever other foods you choose. It does not deprive your family of their favorite dishes.

The "protective diet" is not expensive because the most nutritious vegetables are often quite low priced. Green cabbage, for instance, contains all three vitamins and the important mineral salts. It is also valuable for its "roughage" qualities, which keep the intestines scoured out and in a healthy condition. Other cheap but nutritious vegetables are spinach, kale, tomatoes, yellow turnips, yellow squash and carrots. These are all within the scope of every family's budget and one or another of them should not fail to appear on the menu every day.

If you have raw fruit for breakfast or serve it as dessert for luncheon or dinner you need not have two salads that day; one will be sufficient. The point is to get some raw food into your diet, and salads seem a safe and popular way of getting it.

In some localities salad greens, such as lettuce and romaine, may not be obtainable at all seasons, but fortunately cabbage, one of the most nutritious and economical salad plants, can always be had. It is delicious shredded and served very crisp and cold with cooked or mayonnaise dressing. Or it can be used as the foundation for other more hearty salads.

It may sound more difficult to carry out the "quart of milk" schedule, but when you consider the many ways other than drinking that milk can be included in the diet, it is not so formidable as it sounds. Cereals use lots of milk, as do cream
soups. Vegetables, meat and fish served in white sauce are a means of getting a little into the diet and there are many desserts such as baked custards, blanc mange, ice creams, tapioca, rice and bread puddings, which are made almost entirely of milk.

Evaporated milk, diluted with water, or milk powder may be substituted for fresh milk in cooking if desired, but will not take the place of whole milk as a beverage for children.

Besides providing proper nourishment the ideal meal should furnish variety in flavor, texture, form and color. Eye appeal is almost synonymous with appetite appeal, and a meal consisting of cream of celery soup, creamed chicken, mashed potatoes, cauliflower and baked custard might fulfill all nutrition requirements but would be so monotonous in appearance that it would completely fail in its mission. Some sharp contrast in flavor, like currant jelly, and in texture, like crisp, green lettuce, would add much to the interest of this meal.

When there are left-overs to be used up, plan to disguise them. Soufflés and croquettes are not recognizable as Sunday’s roast, and crisp fritters with cheese sauce will be spurned by no one even if they are the survivors of last night’s vegetables. And whenever your ingenuity fails look into this little book for friendly help.

(Seasonable menus will be found on pages 220 to 231. They are based on the foregoing principles and will prove suggestive both for hot and cold weather.)
To measure flour or any dry ingredient accurately heap up the material in a cup and then level it off with a knife or spatula.

To measure quarter or half spoonfuls of Crisco or dry ingredients when one doesn't possess a set of measuring spoons shown in Chapter III, level off an ordinary spoonful with a knife, cut lengthwise through the center to make a half spoonful, and again crosswise (as shown in illustration) for a quarter spoonful.
CHAPTER V

Deep Fat Frying

Frying is the one phase of cooking of which the average housewife has still a lot to learn. Either she fries food haphazardly, ignorant of the scientific principles back of the process, and with sad results to her family’s digestions; or, believing that all fried foods are indigestible, she veers to the other extreme and entirely avoids frying.

Of deep fat frying she oftens knows nothing. And yet foods, properly fried, have a savor and delicacy which almost no other form of cooking can develop, and they hold no terrors for the digestion. In that one word, “properly,” lies the whole secret.

One cannot speak of frying without differentiating between the two forms of frying, sautéing and frying in deep fat. They are two distinct methods, each with its fine points. Sautéing is cooking in a small amount of hot fat; deep fat frying means cooking in a kettle of hot fat, in which the food is immersed. In both of these forms of frying the French are past masters and this is one of the reasons why their food has such delicacy, flavor and variety.

The sautéing method is frequently used to sear over the outside of meat and poultry which are to be cooked in water, as for stews, fricassees and meat pies, the hot Crisco causing a coating to be formed over the surface which prevents loss of flavor in the process of stewing or simmering. Fish cakes, hash and fried eggs are just a few of the familiar foods cooked by this method. Fritters and croquettes may also be sautéed if preferred, but the appearance is not quite so perfect as when cooked in deep fat and the food is more likely to absorb Crisco, so the latter method is recommended in this book.

[44]
Roll the food to be fried in crumbs, then dip it into beaten egg, and once again in the crumbs

Certain fish cut in small pieces, such as fillets, and thin fish, like butter fish, are usually sautéed instead of cooked in deep Crisco. Just as for deep frying the Crisco should be hot—but not smoking—when the food is put into it.

To wipe out that bugaboo of the indigestibility of anything that is fried, one must keep in mind two cautions, first—as to the kind of fat used for frying and the way it is used; second—as to the preparation of the food to be fried. A fact to be learned by heart is that when fat begins to smoke it begins to decompose. It then tends to become less digestible and to lose some of its nutritive value. Crisco does not smoke at proper frying temperatures. There is no reason, therefore, why it should be heated to the decomposition point.

In frying, the hot Crisco seals the surface of the food immediately, thereby preventing sogginess and grease soaking. Crisco fried foods are crisp and crusty on the surface, well cooked inside. They are readily digestible not only because they are properly cooked but because the new super-creamed Crisco in itself is readily digestible.

Various fine points are worth remembering in preparing food to be fried in deep fat. "Egging and crumbing," for instance,
When rolling out doughnuts take care to have dough stiff enough so that you will need very little flour on the board, as this extra flour is likely to cook off in frying fat and discolor it.

prevent fat from being absorbed by the food, because heat coagulates egg proteins and quickly forms a protective coating through which grease cannot penetrate. Such foods as oysters, scallops, croquettes and cutlets are always dipped in egg and crumbs before frying.

The egg for this purpose should be beaten slightly and mixed with two tablespoons of water. For the crumbs use dried bread, rolled out and sifted, or you can buy crumbs in a package if you have no stale bread on hand. Roll the food to be fried in the crumbs, then dip it into the egg mixture and roll again in crumbs. This makes a heavy coating and a crisp, tender outside crust is formed when the food comes in contact with hot Crisco. A second important point is that foods for frying should be as dry as possible before they are put into the kettle. If you soak French fried potatoes in cold water before frying—as you should to remove some of the starch—dry them thoroughly in a clean towel before dropping them into the Crisco. This makes them wonderfully crisp and tender.

The vessel for deep fat frying should contain enough Crisco to float the food without being so full that it will bubble over. Also it is essential to drain all fried foods as they are taken.
Be sure Crisco is the proper temperature before putting in the doughnuts. It may be necessary to reheat the fat before starting each batch from the hot Crisco. This is easily done by dropping them into a pan lined with unglazed paper.

With these few definite facts in mind a housewife can successfully add to her culinary program a number of dishes which lend a welcome variety to the family menus. Not only does deep fat frying open up new and interesting avenues in cooking, but it offers ways for subtly disguising and utilizing leftovers which the family might otherwise reject. It is a very economical process as well, because it means short cooking with a consequent saving of time and fuel. And one more point in its favor—food immersed in hot fat has all of its juices closed in and so retains its full flavor.

Crisco which has been used for frying is not discarded but may be used again and again without losing its sweetness. It should be cooled rather rapidly, not left to simmer indefinitely on the back of the stove. On the other hand it should not be plunged into the ice box, but merely set in some cool place. When partly cooled, it should be strained through a fine sieve or cheesecloth to free it from any particles of food.
Pour a little of the timbale batter in a cup (fill about half full). Dip the heated timbale iron into it until the iron is nearly covered with the batter, then dip immediately into the hot fat. (See recipe for Swedish Timbales, page 61)

If later any taste or odor should be discerned in Crisco which has been used for frying, it is safe to prophesy that particles of food, which should have been carefully strained out, have been left in it to become stale and rancid.

Clarify Crisco more thoroughly by occasionally melting it over a gentle heat. When melted drop in slices of raw potato, allowing them to cook slowly until brown. The potato, being porous, will absorb small particles of food material. The Crisco should then be strained through a double thickness of cheesecloth and allowed to cool quickly. The fact that Crisco can be used so many times makes it very economical.

One should not keep Crisco in the ice box. It does not become rancid in average temperature.

SUCCESS SECRETS

1. Never allow Crisco to get hot enough to smoke.
2. Do not fill frying kettle more than two-thirds full of Crisco.
3. Allow Crisco to heat gradually, starting it in a cold utensil.
4. Use a wire basket, fitting loosely into the kettle, to lift food in and out of the hot fat. A long handled slit spoon or skimmer will serve the purpose if you haven’t a basket.

5. Do not attempt to cook too much food in the fat at one time. Always test the temperature of the fat just before adding each batch of food.

6. When food is cooked remove it immediately and drain on unglazed paper to absorb any excess fat.

7. Always strain Crisco after using; then cool it quickly.

8. Be sure that all food to be fried, which has been previously washed or soaked in cold water, is thoroughly dried.

9. When testing the temperature of hot fat with a thermometer hold it in the center of the kettle so that the mercury bulb is covered but does not touch the bottom.

10. If a thermometer for testing temperature of fat is not available, use the following tests with a cube of soft bread:

<table>
<thead>
<tr>
<th>TEMPERATURE</th>
<th>BREAD TEST</th>
<th>KIND OF FOOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>340°F–375°F.</td>
<td>Cube of bread turns light brown in 50 to 60 seconds</td>
<td>Uncooked mixtures as doughnuts and fritters, also small pieces of raw foods, as oysters, clams, etc.</td>
</tr>
<tr>
<td>375°F–400°F.</td>
<td>Cube of bread turns light brown in 40 to 50 seconds</td>
<td>Previously cooked mixtures as croquettes, fish cakes, also French fried potatoes, potato chips</td>
</tr>
</tbody>
</table>

11. Cook frequently in deep, hot Crisco. It is an economical method of cooking, as well as a means of bringing delicious, digestible foods to your table.

THERE are two good reasons for serving soup. First, soup can be an appetizer to stimulate the appetite and aid digestion; and second, it can be an actual part of the meal, in which case it must be high in nutritive qualities. The real value of soup lies in this second use.

To the first or appetizer group belong the clear soups, consommés and bouillons. The latter would be served as the first course of a heavy dinner or luncheon. In the second or nutritive group are included all the milk and cream soups, bisques and chowders which are intended to accompany lighter meals or to be served as a main course for luncheon or supper.

Many American housewives throw away the water in which vegetables are cooked. In this water mineral elements and valuable vitamins are held in solution, and when you throw it away you are actually disposing of a certain amount of health. So, save it, and use it later for cream soups.

The best method of making cream soup is to combine the desired vegetable stock with a white sauce of the proper consistency. A most delicious white sauce, rich and absolutely smooth, is made with the new super-creamed Crisco. Crisco, melted, blends easily with flour so that as the milk is added an even-textured sauce results. And is there anything worse than lumps of “thickening” in soup?

The following recipes for cream soups have been worked out in chart form to make them easy for you to use. If you learn to make one of these soups well, you will be able to make all of them well and to add others of your own choosing if you like. Almost any combination of left over vegetables and the water in which they are cooked may be prepared in the same way.
Cheese Balls (Recipe on page 50)

Fried Carrots (Recipe on page 57)
SUCCESS SECRETS

1. Never throw away the water in which meat or vegetables are cooked—save it for soup.

2. Save small amounts of left over vegetables. They may be combined and cooked together to make delicious cream soups.

3. Prepare your cream soups ahead of time and reheat them just before serving in a double boiler. This will relieve you of so much "last minute" cooking.

4. In blending ingredients for white sauce be sure that Crisco and flour are well mixed before adding the liquid.

5. Mutton is too strongly flavored to be used as a basis for soup stock. Disguise it by combining it with other meats and vegetables whenever it is to be used.

6. Use the tougher cuts of meat for soup making, such as shoulder, neck, flank, tail and shin. These parts are better flavored as well as more economical to buy.

7. Keep your stock pot perfectly sweet and clean. Empty it often, wash thoroughly and let stand in the sun to dry.

8. Serve soup very hot in heated soup plates or bouillon cups.

CHAPTER VII

Cereals and Cheese

MANY homemakers do not realize that certain other foods furnish the same amount of nourishment as meat.

Cheese and milk are the two most valuable foods which may be substituted for meat in the meatless menu as they are rich in protein, the element usually supplied by meat. But to give them variety it is necessary to combine them skillfully with other things.

The cereal foods lack just the elements which milk and cheese contain and are therefore well suited to combine with them, especially if fat is added to make up for the lack of meat fat. Crisco, which is a pure vegetable fat, supplies this deficiency and helps to make a perfectly balanced dish of real nutritive value.

Some of the recipes in this chapter are for "one-dish meals" and if followed by a light salad of greens or fruit they will supply the full amount of nourishment for one meal. Among those which will be found most appetizing are baked samp and cheese with tomato sauce, Italian spaghetti and Mexican cheese.

For your convenience a chart giving directions for cooking the most familiar breakfast cereals has been included in this chapter.

SUCCESS SECRETS

1. Buy cereals in small quantities and keep in tightly covered jars or cans.

2. After five minutes of cooking over direct fire place cereal in a double boiler and cook until done.
3. Save your cereal left over from breakfast! Mold or slice it and fry in hot Crisco. Serve with syrup as a dessert for luncheon or supper.

4. Use cheese more often in your menu. It is a concentrated source of protein (building food) and in combination with other foods makes a good substitute for meat.

5. Serve “one-dish” meals occasionally to your family. They save fuel and labor and are an economical way of using left over food material.

6. Cheese cooked at too high a temperature becomes tough and leathery. Bake dishes containing cheese in a moderate oven or over hot water.

EGGS are an important source of iron, phosphorus and vitamins, but they are not a complete food in themselves and should be used in combination with other foods which supplement them.

When eggs are used as a breakfast dish—scrambled, fried, baked, poached or in an omelet—their possibilities are merely begun. With a cream sauce and a few hard cooked eggs one has the makings of an endless range of luncheon and supper dishes. An ingenious cook will add anything to eggs from minced green pepper or pimento to cheese and mushrooms and, presto, with a pretty garnish she has something to be proud of.

A hostess famous for her salads always introduces hard cooked eggs as a finishing touch and as an emergency measure usually keeps one or two on hand ready cooked. Eggs offer any number of possibilities for salads.

In soups, eggs are a bit of culinary wisdom everyone should cultivate. A raw egg added at the last minute, or a chopped hard cooked egg lends both flavor and nourishment to soup.

New super-creamed Crisco is the ideal fat to use in egg dishes of all kinds because of its delicate flavor. For frying, scrambling or making omelets eggs properly cooked in Crisco are apt to be more easily digested than when cooked in a fat which burns easily.

SUCCESS SECRETS

1. For “hard cooked” eggs allow them to stand for twenty to thirty minutes in water kept just below the boiling point. For “soft cooked” eggs allow them to stand from five to eight minutes. Never allow the water in which eggs are cooked to reach the boiling point, as it makes the white tough and leathery.
2. The whites of eggs beaten until stiff and "folded in," as for omelets and soufflés, make the mixture puff up and become light.

3. Include eggs frequently in your menu. They are especially valuable as a body building food because of the protein and mineral matter they contain.

4. Use only strictly fresh eggs for boiling and poaching.

5. Test eggs for freshness: (a) if they rattle when shaken they are stale. (b) When placed in a glass of water a perfectly fresh egg will sink to the bottom, a half stale one will rise slightly at one end and if very stale it will float.

6. Buy eggs when they are plentiful and cheap, and put them away in water glass solution, or pack them in sawdust against the season when the price is high.

7. Use Crisco, instead of butter, for all egg cookery. Eggs require slow cooking and butter is apt to burn before they are done, making them unsightly and indigestible.

8. Wash dishes in which eggs are cooked first in cold water to loosen the egg, then in hot water.

9. Keep eggs in a cool place, but not in the refrigerator unless in a covered dish, because their porous shells readily absorb odors.

---

**FRIED EGGS**

Heat an iron frying pan and put enough Crisco in it to cover the bottom of the pan generously. When melted drop eggs into it. Fry slowly until the white is set. Serve hot. If a harder yolk is desired the eggs may be turned and cooked on the other side.

HAVE you ever wondered why fish has been called "brain food?" There is no actual foundation in fact for such a statement. But because most kinds of fish are low in energy-producing materials (fats, carbohydrates) and rich in general health materials (proteins, vitamins) they are considered good food for people who live sedentary lives. Fish is also easily digested, and so persons who do not get sufficient exercise to digest more hearty food can readily take care of well-cooked and temptingly served fish.

Wherever it can be had at low cost, fish should be used frequently to help furnish the protein requirements of the family. It may be a little more trouble to prepare and require a little more care than a lamb chop, still the difference in price and the pleasing variety added to the menu make it quite worth the extra effort.

Fish appears on the market fresh and preserved by freezing, canning, salting and smoking. One must be careful in selecting fish that it is perfectly fresh, as it decomposes readily.

If one is not fortunate enough to live in a locality where she can purchase fresh fish, storage fish is almost always available and, if it has been properly preserved, is even more reliable than "uncertain" fresh fish. Cold storage fish should never be purchased unless frozen solid and fully enclosed in a jacket of ice. When it comes home from the market put it in a covered pan in the ice box and allow it to thaw gradually, but do not soak it in water. Use it as soon as possible after it has thawed out. Salted and smoked fish are always available, as are also good brands of canned fish.

The preparation and cooking of fish is simple and quickly accomplished and if properly prepared at the market it requires
very little attention by the cook. Whole fish should be care-
fully washed in plenty of cold water, while sections, such as
fillets and slices, should be wiped with a clean damp piece of
cheesecloth.

As most fish is deficient in fat it should be cooked so that fat
enters into its preparation in some way. In every case Crisco
"just fills the bill." In baking, bits of Crisco dotted over the
top make it rich and tender; in broiling, the pan rubbed with
Crisco keeps the fish from sticking; and for deep fat frying and
sautéeing, cooking in the new super-creamed Crisco is the best
possible means of securing delicious, easily digested sea food.

SUCCESS SECRETS

1. Fish, as a source of tissue-and-bone-building material, is
cheaper than meat. Substitute it once or twice a week
for the ever-present roast and stews.

2. When boiling white fish add a little vinegar or lemon juice
to the water to keep the flesh white and firm.

3. Narrow strips of muslin, greased with Crisco and put across
the bottom of the pan in which fish is to be baked, make
it easy to remove the fish from the pan without breaking.
The ends of the strips must extend beyond the fish.

4. In selecting fish remember that (a) fresh fish should not
give off an offensive odor, (b) the eyes of fresh fish should
be bulgy, bright and shiny, (c) the flesh of fresh fish should
be firm and the gills reddish in color.

5. When fish comes from the market remove it from the
paper and, if it has not been cleaned, clean it at once.
Wash and salt it slightly and put in a covered dish.

6. Keep fish in a part of the refrigerator from which odors
cannot be carried to other foods.

7. Cook fish as soon as possible after it comes from the
market.

8. See Chapter V for additional fish recipes.

Turn lobster on back and make a cut with a sharp knife from point under head to tail, through the shell. Take out the large intestine which runs the length of the tail. (This is often colorless.) Crack the claws so that the meat may be easily removed.

CHAPTER X

Meat and Poultry

Do you know that about one-third of the money spent on food in the United States is spent for meat? This seems a high percentage but it is probably due to the fact that so many of us demand the expensive roasts, steaks and chops. Fortunately there is just as much nourishment in the cheaper cuts of meat as in the expensive cuts, and if they are properly cooked they will be deliciously tender and palatable.

The recipes in this chapter call frequently for the cheaper cuts, and if you follow them you cannot help but notice the difference in your butcher's bill at the end of a month.

In cooking meats you aim for two things. First, you want to keep all the juices in the meat, and secondly, you want the tissues to grow tender. Juices will not run out of a piece of meat if the outside is first seared over by exposure to a very hot fire; then the heat should be reduced and the meat cooked rather slowly for the remainder of the required time if you want to avoid toughness.

During the process of roasting, the meat should be basted frequently to keep it moist and to concentrate the flavors in the meat itself. The tougher meats, and in fact any meat or fowl which is to be cooked in water, should not actually boil. It should simmer or cook very slowly just below the boiling point. Slow cooking loosens the connective tissues while the more rapid cooking hardens and toughens them.

When cooking roasts it is best not to put any water in the pan at first. If the meat has not enough fat to make liquid for basting, Crisco will be found a great help. Basting lean meats with Crisco makes them juicy, tender and deliciously flavored. Meats basted with Crisco are brown and have a delicately crisp outside covering.

[87]
As poultry is frequently lacking in fat it is sometimes necessary to add extra fat when roasting it. The skin of chicken and turkey should be rubbed over with Crisco before being put in the oven and then the bird should be basted frequently, more Crisco and a little water being added as the pan becomes dry.

**SUCCESS SECRETS**

1. When meat comes from the market remove it from the paper and place it in the ice box on a china or enamel plate.
2. Do not put meat into water to wash it. Wipe with a clean, damp cloth before cooking.
3. Do not pierce the meat with a fork while it is cooking; this lets out the juices.
4. To draw out the flavor of meats, as for broths, start the cooking in *cold* water, bringing slowly to the boiling point.
5. To keep flavor and juices *in* meat expose it to extreme heat *first*, then reduce the temperature and cook more slowly.
6. Cook the tough and cheaper cuts of meat very slowly and for a long time.
7. Baste meat and poultry often while roasting.
8. Learn to make appetizing, nourishing dishes of the cheaper cuts of meat.
9. Use the internal organs of beef and lamb—liver, kidneys, heart and sweetbreads—to increase the vitamins in your diet.
10. Serve Yorkshire pudding with roast beef, dumplings with stew and fried apples with pork to give your meat course "the perfect touch."

**ROAST BEEF**

Wipe the meat with a clean damp cloth. Do not wash it. Dredge with flour. Place in roasting pan and put ½ teaspoon salt, ¼ teaspoon pepper and 2 tablespoons Crisco in the pan. Put in a very hot oven (500 degrees F.) for 15 to 20 minutes. Reduce heat to hot oven (400 degrees F.) and cook, allowing 8 to 10 minutes to a pound for standing roast and 10 to 12 minutes for a rolled roast, if it is wanted rare. Baste frequently. Do not add water to the roast. Serve with Yorkshire Pudding (page 101).

Spread top with Crisco. Bake in a moderate oven (325 degrees F.) 1 hour. Prick top with fork to allow meat to absorb the Crisco. Baste occasionally with melted Crisco and a little hot water. Serve hot with Tomato Sauce (page 116), or cold with catsup or pickles.

**VEAL PIE**

2½ pounds knuckle of veal  
1 teaspoon salt  
½ teaspoon pepper  
2 tablespoons Crisco  
2 slices onion  
2 cups celery, cut in pieces

2 cups water  
½ cup sliced carrots  
2 tablespoons chopped parsley  
2 tablespoons flour  
¼ cup water  
Plain pastry

Cut meat from the knuckle in small pieces (keep bone to use in making soup stock). Sprinkle with salt and pepper. Melt Crisco, add onion and cook slowly 5 minutes. Remove onion from pan and put in the veal. Cook until meat is brown, stirring frequently. Add celery and water, cover and simmer until meat is tender. Add a little water to the meat as liquid boils away. Add raw carrots and parsley and more salt and pepper if necessary. Cook 20 minutes longer. **CROWN ROAST PORK**

Select the choicest ribs from two loins of pork. Scrape fatty portions from the bone between the ribs as far as the lean meat and trim off. Shape both pieces in a semi-circle having ribs outside and sew pieces together to form a circle or crown. Trim ends of bone evenly and put small cubes of salt pork on them to prevent the bones from burning. Put roast in a roasting pan and add ½ cup hot water. Spread with softened Crisco and sprinkle with salt and pepper. Bake in a very hot oven (460 degrees F.) 15 minutes, reduce the heat to a moderate oven (350 degrees F.) and bake until well done, allowing 20 to 25 minutes per pound. Vegetables

In the chapter on nutrition it was explained how important a part vegetables play in the diet. But remember when you buy vegetables that price is no indication of food value. Cabbage, for instance, a vegetable which can be obtained at almost any season of the year and in almost any locality at a low price, is one of the most valuable foods we have, whereas mushrooms, almost the highest priced of vegetables, have very little food value.

The homemaker must learn to cook the cheaper vegetables in novel and appetizing ways. Cabbage, turnips, squash and carrots hold many surprises for the family of the good cook. Try some of the recipes in this chapter and see!

Most vegetables should be cooked as quickly as possible and in very little water so that their nutritious substances will not be boiled away. Boiling vegetables in a large quantity of water is no longer considered the best way. The only exceptions to this rule are potatoes, dried beans and peas and the other starchy vegetables which should be cooked slowly in plenty of water. Whenever any water is left from cooking vegetables save it and use it for soup (page 62).

Vegetables contain very little fat. Potatoes, indeed, are mostly starch and dry eating unless fat in some form is added to them. When served with sauces made of Crisco, or mashed and beaten up to a fluff with Crisco and hot milk, or scalloped with Crisco dotted over the top, or prepared in any of the ways suggested in this chapter, the potato takes a new lease on life and grows in popularity.

Not only does the new super-creamed Crisco add food value to vegetables with which it is cooked but, in the recipes where certain vegetables are sautéed, or cooked in a small amount of
Crisco, a most delicious flavor is developed which cannot be obtained by any other method of cookery. Hot Crisco brings out their most delicate characteristics and makes them temptingly crisp and tender.

SUCCESS SECRETS

1. Buy vegetables in their season. Out of season they lack flavor and are expensive.
2. Don’t buy vegetables that are old or wilted, moldy or over-ripe.
3. Buy green vegetables in small quantities as you need them. Buy winter vegetables in larger amounts, if you have space to store them.
4. Soak green vegetables in cold water to make them fresh and crisp. Soak potatoes in cold water to make them mealy when cooked.
5. Wash all vegetables carefully in cold water before cooking.
6. Cook vegetables in boiling salted water quickly. Use as little water as possible.
7. Don’t allow potatoes to stand in water after they are cooked. Drain immediately and keep hot over water.
8. Include vegetables in your diet every day; they are necessary to good health.
9. Save small amounts of left over vegetables for salads, soups, fritters or croquettes.

Melt 2 tablespoons Crisco in a frying pan. Add 2 cups finely chopped cold potatoes, 1 tablespoon chopped parsley, ½ teaspoon salt and few grains pepper. Mix thoroughly, then allow the potatoes to brown on the under side. Fold over like an omelet. Serve immediately.

LYONNAISE POTATOES
Slice 1 small onion thin and fry in 1 tablespoon Crisco until a delicate brown. Add 2 cups cold boiled potatoes, cut in ¼ inch slices. Sprinkle with ½ teaspoon salt and few grains cayenne. Let potatoes brown on the under side, fold over and turn out on hot platter. Sprinkle with 1 teaspoon chopped parsley.
MASHED POTATOES
Select medium-sized potatoes. Wash, pare and let stand in cold water 1 hour. Cook in boiling salted water until tender. Drain off all the water and mash with a potato masher or force through a ricer. To 6 potatoes add 2 tablespoons Crisco, 1 teaspoon salt, few grains pepper and 4 tablespoons hot milk. Beat with a fork until creamy. Pile lightly in a hot serving dish and sprinkle with finely chopped parsley. Serve immediately.

POTATO CAKES
Shape cold mashed potatoes in small flat circular cakes. Sprinkle with flour. Fry on one side until a delicate brown in a small amount of Crisco, turn and fry on the other side.
A good way to use left over potatoes.

SCALLOPED POTATOES
Wash, pare and cut potatoes in thin slices. Soak in cold water 1/2 hour. Put a layer of potatoes in a greased baking dish, sprinkle with salt, pepper and flour and dot with small bits of Crisco. Repeat the process until all the potatoes are used. Add enough hot milk to almost cover top layer. Bake in a moderate oven (325 degrees F.) 1 to 1 1/2 hours.

POTATO SOUFFLÉ

2 tablespoons Crisco
1 teaspoon salt
Few grains cayenne
1 teaspoon chopped parsley
1 teaspoon onion juice
3 egg yolks

Mix potatoes, Crisco, salt, cayenne, parsley and onion juice together. Add beaten egg yolks and mix well. Fold in the stiffly beaten egg whites. Put in greased baking dish, set in a pan of water and bake in a moderate oven (350 degrees F.) 50 to 60 minutes. Serve immediately.

STUFFED BAKED POTATOES
6 medium-sized potatoes
2 tablespoons Crisco
4 tablespoons hot milk

Wash potatoes with a vegetable brush and soak in cold water 1 hour. Bake in hot oven (400 degrees F.) 40 to 50 minutes. Cut a cross in the side of each potato skin and turn back corners. Scoop out the potatoes with a spoon, being careful not to break the skins. Mash and add Crisco, milk, salt, pepper and paprika. Beat until light and creamy. Fill the potato skins with the mashed potato. Dot each one with a small bit of Crisco and return to the oven to brown. If desired, potatoes may be sprinkled with grated cheese before putting in oven.
GLACÉ SWEET POTATOES

Select medium-sized potatoes. Scrub with a vegetable brush to remove all particles of dirt. Cook in boiling water until tender. Drain off water and remove the skins. Cut in halves, lengthwise, and put them in a greased shallow pan. Make a syrup by boiling $\frac{1}{2}$ cup sugar, $\frac{3}{4}$ cup water and $1\frac{1}{2}$ tablespoons Crisco 5 minutes. Pour this over the sweet potatoes. Bake in a hot oven (400 degrees F.) 20 minutes or until a delicate brown, basting occasionally with the syrup.

To choose the right sauce to serve with the right meat, fish or vegetable is no mean accomplishment and the housewife who is noted for her good table will be found to be something of an authority on sauces. She knows that for certain boiled fish and for mutton, caper sauce is a decided success; for fried fish, tartar sauce is the proper thing; for asparagus, Hollandaise; for beefsteak and fillets of beef, mushroom sauce, and so on through the various dishes which can be made culinary masterpieces with skillful handling.

There are two secrets in the making of good sauces! One is the way in which the fat and thickening are blended with the liquid, and the second is the manner in which the flavorings are added to the sauce. If the vegetables, such as onion, parsley and chive, used for flavoring sauces are first browned in Crisco, a decided flavor is brought out. If, on the other hand, a very subtle flavor is wanted the seasoning vegetables should be added to the sauce when it is completely made. Bland foods like asparagus need the more rich, highly seasoned sauces, while foods of pronounced flavor, like mutton, are best with a sauce the flavor of which is sharp and obvious.

The other secret, that of carefully combining the liquid with the fat and thickening, is what gives the sauce its smooth texture and well-cooked flavor. The starchy taste of uncooked flour in a sauce is inexcusable.

Sauces made with the new Crisco have a delicacy of flavor and texture which only Crisco can give them. Hollandaise made with Crisco will be a boon to the housewife who has hitherto felt she could not make it because so much butter was required. The Crisco chart for White Sauce on next page will be found of great help in varying your menus without too much work and worry.
SUCCESS SECRETS

1. Serve hot sauces very hot and cold sauces very cold.

2. Use the Crisco chart for white sauce. It is made to simplify your cooking, as white sauce is the foundation for any number of delicious dishes.

3. Blend Crisco, flour and seasonings thoroughly before adding liquid.

4. Never serve a lumpy sauce. If it isn’t perfectly smooth, strain it before serving.

5. Choose the right sauce to serve with the right food—richer sauces for the plainer dishes and simple sauces for the rather rich foods.

6. A perfect sauce is an aid to digestion and a good source of nourishment.

7. To draw out the flavor of vegetables used for flavoring sauces (onions, parsley, carrots, etc.) sauté them first in a small amount of Crisco.

Quick Breads

QUICK BREADS, or hot breads as they are sometimes called, are breads which may be prepared in a very short time and are intended to be served at once while they are fresh and hot. Keeping them for any length of time spoils their flavor and lightness.

Because they can be prepared so quickly and because there are endless delicious recipes and variations for them which can be easily followed, quick breads have become a very popular part of the daily menu. In the South many families serve them at every meal and do not consider a menu complete without hot bread in one form or another. Spoon bread and popovers are among their favorites, while in the New England states brown bread and doughnuts hold sway.

Although hot breads are quickly and easily made there are certain principles which must be learned for the very best results. These are: use good materials, measure accurately, mix carefully and bake properly.

To have a good product we must use good material. In using the recipes in this chapter you will discover that the new super-creamed Crisco gives a tender, well-browned crust, imparts a delicious nutty flavor, and makes a particularly rich dough. Use it, too, for greasing the pans so that your muffins will not stick.

There are two general methods of combining the ingredients for quick breads. They differ in the way in which the shortening is added. In one case, unmelted Crisco is worked into the dry ingredients and the liquid then added gradually. This method is used for soft doughs of the baking powder biscuit type. The other method is used for thin mixtures, or batters, such as muffins, waffles, griddle cakes and popovers. For these Crisco is melted and added last, after the dry ingredients and liquid have been mixed together until free from lumps.
Chicken Pie (Page 98)  Baking Powder Biscuits (Page 122)

Sweet Milk Griddle Cakes (Recipe on page 127)
The old method of guessing at the heat of your oven is too uncertain. If you have no oven regulator an oven thermometer placed on the baking shelf will tell you just when to put in your biscuits.

The handling of hot bread mixtures has a great deal to do with the success or failure of the finished product. Soft doughs should be handled as little as possible—only enough to mix the ingredients thoroughly. Muffin mixtures should be beaten only enough to make them smooth. Too much beating makes the muffins coarse grained and full of holes. Popovers, on the other hand, which depend upon the air beaten into them to make them “pop,” should be very thoroughly beaten after all the ingredients are combined.

The next and very important point is the baking—which may “make or break” your reputation as a cook. If possible get an oven regulator; you have only to set it and then forget your oven until the time is up. Or next best, buy an oven thermometer for two dollars and look at it occasionally to see that it stays at the proper temperature. The old method of guessing at the heat of your oven is too uncertain and you will find that a heat regulator of some kind will soon pay for itself in saving food material from burning and yourself from worry.
**SUCCESS SECRETS**

1. Use level measurements.
2. Sift flour before measuring.
3. Collect all ingredients before starting to mix.
4. Grease pans with Crisco before beginning to mix.
5. Regulate oven for temperature given in recipe.
6. Bake quick breads as soon as mixed, with the exception of a few loaf breads (see recipes).
7. Keep baking powder tightly covered in a cool, dry place.
8. Break eggs just before using and beat according to directions.
9. Handle baking powder doughs as little as possible.
10. Serve quick breads as soon as possible after they are baked, with the exception of loaf breads which should cool before slicing.

CHAPTER XIV

Yeast Breads

IN THESE busy days many of us buy our bread at the corner grocery because we think we have no time for bread baking. But if you could be sure that within three hours after you had first set your dough to rise you could take the golden brown, crusty loaves from the oven would you be willing to bake at home?

According to the new "quick method" of bread making you can make your sponge in the morning and have hot bread within three hours—in time for luncheon! For about 30 or 40 minutes of this time you will have been occupied with the bread making; during the remainder of the three-hour period you will have been free to go about your other duties.

Of course more yeast is required by this new method than by the old, over-night process, but the flavor is actually better than that of bread which uses less yeast.

To make bread by the recipes in this chapter will take about three hours, as has been said. In the short process of bread making the all-important thing to watch is your temperature. Keep the dough at 80 degrees or 82 degrees Fahrenheit during the time it is rising, as this is the temperature best suited to yeast growth. Use an ordinary dairy or candy thermometer, put it into the dough and cover with a clean cloth. If the room is cool, place the bowl in a pan of warm water.

The ingredients essential to a good bread are flour, yeast, salt, sugar, liquid and shortening. The flour best suited to bread making is one which contains a large amount of gluten, for gluten produces a dough that is elastic and spongy. The yeast may be either compressed or dry. Among various yeasts, Fleischmann's Compressed Yeast stands out as one of high quality. Furthermore, it can be bought in practically every store. The liquid may be either milk, water, or half milk and

[129]
To keep your yeast dough at 80 to 82 degrees F. during the time it is rising, use thermometer, put it into the dough, and cover with a clean cloth. If room is not warm enough place bowl in a pan of warm water and add a little hot water occasionally to regulate temperature.

half water. Bread made with whole milk is, of course, more nutritious and should be used whenever possible.

A little salt is usually added to improve the flavor and regulate the fermentation, but too much retards the action of the yeast. Sugar adds flavor and helps to give a delicate brown crust. It also hastens slightly the action of the yeast, so use some and help the yeast along!

Shortening used in bread must be the very best, because on it depends the quality of crumb, the tenderness or toughness of the crust, and the keeping qualities and flavor of the loaf. Crisco makes the crust tender, the crumb flaky and improves the keeping qualities of bread.
A "nutty" flavor is given to the crust if, just before it comes from the oven, it is rubbed over with melted Crisco.

**SUCCESS SECRETS**

1. Use level measurements.
2. Sift flour before measuring.
3. Be sure to scald milk used in bread making.
4. Dissolve yeast in *lukewarm* water—hot water will kill the yeast and prevent bread from rising.
5. To prevent a hard surface forming on the dough while rising, brush lightly with melted Crisco and cover with a clean cloth.
6. Knead dough thoroughly; the *first* time to blend the ingredients and the *second* time to distribute the gas bubbles produced by the yeast.
7. Use little or *no* flour on the board for second kneading. Extra flour added at this time takes from the lightness of the finished loaf.
8. Keep bread dough at even temperature during mixing and rising—80 degrees to 82 degrees Fahrenheit is the ideal temperature for yeast to grow.
9. After baking remove bread immediately from the pan, place on cake cooler and cover lightly with clean towel.
10. Never wrap bread tightly or put it in bread box while hot—moisture will collect on the surface and it will not keep well.
11. Watch baking carefully—too hot an oven makes a heavy loaf, too slow an oven a loaf of coarse, uneven texture.

Salads

If we are going to serve salads to our family as often as we should—at least once a day according to good health rules—we shall have to give a little time and thought to keeping the salad course out of the rut.

Salad greens must be carefully washed several hours before the meal and put in the ice box or some other cool place to become crisp. A small bag made of cheesecloth is very convenient for holding the washed lettuce and if you keep it filled you will always have a supply of fresh, crisp greens on hand in case of an emergency meal.

When you separate a head of lettuce or Romaine don't discard the outer leaves. Wash and chill them with the rest of the head and use them, shredded, for the foundation of another salad. You will find a pair of scissors very convenient for shredding salad greens.

The other ingredients of the salad, whether they be meat, fruit or vegetables, should be just as carefully prepared and as thoroughly chilled as the greens. Marinate them first. Marinating means to moisten thoroughly with French dressing and let stand for a time—a half hour to an hour—in a cold place in order that the food may absorb some of the flavor of the dressing.

Among the salads which you can serve for special occasions are the molded salads. They are very popular on any occasion, but for the buffet supper, Sunday night tea or bridge party when you want to get everything ready before the guests arrive, you will find them a blessing and your guests will vote them a great treat.

Both the cooked and pineapple dressings are especially good with these more delicate salads as well as with any of the fruit

Silver Cake (Recipe on page 155)
salad combinations. New super-creamed Crisco gives just the right touch—a delicate flavor and a smooth, velvety texture.

SUCCESS SECRETS

1. Include at least one salad in your menus every day.
2. Keep a supply of fresh, carefully washed salad greens in a clean cheesecloth bag in your ice box.
3. Do not discard the outer leaves of a head of lettuce or Romaine. Shred them and use for the foundation of another salad.
4. Chill thoroughly all ingredients used for salads, such as meat, fish, vegetables and fruit.
5. Apples, bananas and pears turn dark after slicing, so prepare them at the last minute. Or cover them with French dressing or lemon juice to prevent them from discoloring.
6. Don’t think you have to make up a fresh supply of salad dressing for every meal at which a salad is served. Any of the dressings given in this chapter, except those to which whipped cream is added, will keep for several days, if kept in a covered jar in the ice box.
7. Don’t put the dressing on salad until immediately before serving. It wilts the greens.
8. Be particular about the appearance of your salad. Remember many of us “eat with our eyes.”
9. Vary your salad course frequently by using crisp shredded cabbage instead of lettuce for the foundation.
10. Don’t always use the same dressing on the same salad! Dress up an old salad with one of the new dressings in this chapter.
11. Don’t think salads have to be elaborate to be good. Any of the following are easy to prepare and delicious served with an appropriate dressing: hearts of lettuce, watercress, chicory, Romaine, shredded lettuce and endive, sliced pine-
apple and cream cheese balls, sliced cucumber and watercress, stuffed celery and hearts of romaine, shredded cabbage and peanut, grapefruit and orange.

CHEESE STRAWS

Roll out Plain Pastry (page 178) to ⅛ inch thickness. Sprinkle with salt, cayenne and grated American cheese. Fold in 3 layers. Roll out again, spread and roll as before. Cut in strips ½ inch wide and 4 or 5 inches long. Bake in hot oven (400 degrees F.) 5 or 6 minutes.

CHEESE CREAM PUDDS

1 cup boiling water  ½ teaspoon salt
½ cup Crisco  Few grains cayenne
½ cup flour  ½ cup grated American cheese
2 eggs

Heat water and Crisco to boiling point. Add flour, salt and cayenne, stirring constantly and cook until mixture leaves sides of pan. Add cheese and mix well. Cool. Add unbeaten eggs one at a time, beating well after each egg is added. Drop by teaspoons on a greased pan, making small balls. Cook in moderate oven (350 degrees F.) 30 to 40 minutes.

This recipe makes 48 puffs.
Sandwiches

There is an interesting bit of culinary history which tells us that the sandwich was named after the English nobleman by whom it was invented. The fourth Earl of Sandwich was so industrious a gambler that he wouldn’t leave the card table even to eat. So he devised this new form of eating—the portable meal!

If the story is true we owe him a debt, for sandwiches are a convenient and delicious food for school lunches, afternoon teas, picnics and motor parties. They even are becoming a “square meal” when made of hot meat and thick, rich gravy.

Bread for sandwiches should be a day old so that it will not crumble when cut. For the daintier sandwiches it should be sliced very thin and the crusts cut off. It may then be cut with fancy shaped cutters, or diagonally, or in narrow finger-length oblongs.

A quarter of an inch is not too thick for bread to be sliced for hearty sandwiches, and unless the crust is hard it need not be removed. In cutting bread keep the slices in the order in which they come from the loaf so that they will fit evenly when put together with the filling between.

Instead of spreading your bread with butter try the new Crisco Spread—the first recipe in this chapter. It is a delicious spread for all kinds of sandwiches and much less expensive than butter! It has about the same consistency as mayonnaise dressing and is very much like it in flavor. One great advantage of Crisco Spread is that it may be kept in the ice box in a glass jar indefinitely. It is always ready for the hungry school boy’s afternoon sandwich or the unexpected caller for whom you want to make a cup of tea. Less filling is needed to make sandwiches savory and appetizing if plenty of Crisco
Spread is used on the slices of bread. It also helps to keep them fresh and moist.

If sandwiches are prepared some time before they are to be served, they should be wrapped in wax paper or, better still, covered with a damp cloth or napkin.

The open sandwich is a rather new idea and offers opportunity for great variety. It consists of a single slice of bread, usually cut in a fancy shape, spread with Crisco Spread and daintily garnished. Canapés are open sandwiches made with highly seasoned fillings such as caviar or anchovy and are served as the first course at dinner or luncheon.

**SUCCESS SECRETS**

1. Use bread twenty-four hours old for sandwiches.
2. Slice bread very thin for dainty sandwiches.
3. Spread sandwiches with Crisco Spread instead of butter.
4. Always keep a supply of Crisco Spread in the ice box.
5. Get your sandwich filling ready before you cut the bread.
6. Cover sandwiches with a clean damp cloth if they are prepared in advance of serving time.
7. Serve a hearty sandwich occasionally for luncheon or supper. It is a good way to use up left over meat and gravy.
8. Vary your luncheon sandwich by making it of toast.

HAVe you ever wondered where all the cake recipes come from? Every cook book you look over has a chapter on cakes and each recipe looks different!

But if you study these recipes carefully you will find that they are not so different after all and that they are really only variations of two kinds of cakes, those made with shortening and those made without shortening. If we learn the general method of mixing these two kinds of cake it is easy to follow all recipes.

Cakes made with shortening are probably the most popular, so let us discuss first the rules for mixing them. Step number one consists in blending together the shortening and the sugar. If this is done thoroughly the texture of the cake will not be grainy. This process is called “creaming,” and is done by pressing Crisco and the sugar against the sides of the bowl with the back of a wooden or metal mixing spoon until the mixture is of a smooth creamy consistency. New super-creamed Crisco is so soft and smooth that it actually cuts creaming time in half.

In many cases, particularly in batters containing whole eggs or yolks, the eggs can be mixed directly with the sugar and Crisco. This is possible only with a shortening that is as soft and creamy as the new super-creamed Crisco. It is desirable not only because it simplifies the mixing process, but also because of the water in the eggs which provides a solvent for the sugar, and thereby helps to produce a more perfectly blended mixture.

The flour is sifted, measured and mixed with any other dry ingredients such as salt, baking powder and spices. This flour mixture is then added to the Crisco mixture. But it is not all put in at once. First, some of the flour goes into the mixing bowl, then some of the milk called for by the recipe and after each addition the ingredients in the bowl are beaten well. When all the flour and milk are in, the batter should have a final beat-
The first step in cake making consists of blending together the shortening and the sugar. This process is called "creaming" and is done by pressing Crisco and sugar against the sides of the bowl with the back of a wooden spoon until the mixture is of a smooth creamy consistency, lasting from one minute for a plain cake to three minutes for a rich one. When not beaten long enough a cake has a porous, open texture with large holes; on the other hand too much beating makes a close-grained, tough cake.

The method for mixing the other kind of cakes, those without shortening, starts by separating the yolks from the whites of the eggs. For sponge cakes the yolks are beaten until thick, then the sugar added gradually and last the beaten whites, flour and flavoring are folded in.

Sponge and angel cakes require a slower oven than cakes made with shortening—from 320 to 340 degrees, depending upon the depth of the pan in which they are baked.

For baking any kind of cake an oven thermometer should be used instead of trusting to the "feel" of the oven. We are not all equally sensitive to heat and what may feel "slow" to one person may feel "medium" to another. An accurate temperature for baking cake is next in importance to careful measurements of the ingredients which go into it. A cake baked in too slow an oven rises over the sides of the pan and has a coarse, open texture, while one baked in too hot an oven becomes solid and close-grained with a hard crust.
Loosen cake from pan by slipping a knife around the edge between the cake and the pan, then invert pan and allow cake to cool on a wire rack so that the air can circulate around it.

Cakes should be allowed to cool on a wire cooler so the air can circulate around them. When turned out on a bread board, or other solid surface, moisture condenses and makes them wet and sticky.

As soon as cake is cool it may be frosted or "iced" and put away in a tin cake box in a cool place. The care of cakes after baking is an important factor in their keeping—the longer they are exposed to the air the more quickly the cake dries out.

Of the cakes made with shortening the plainer ones should be used the same day, or at least by the following day. Layer cakes which are put together with soft "fillings," however, and the richer cakes, made with more Crisco and more eggs, will keep fresh for several days.

Not only do cakes made with new super-creamed Crisco keep well but they have a light, delicate, even texture and a delicious flavor. Crisco blends very easily with sugar in the first step of cake making.

Even in extremely hot weather when it seems desirable to keep Crisco in the refrigerator (at all other times it should be kept at ordinary room temperature) no difficulty in mixing will be en-

countered. Super-creamed Crisco does not become hard and brittle in cold weather or under refrigerator conditions, but on the contrary keeps its creamy consistency and is always ready to measure and mix without preliminary conditioning.

If you once make your cakes with the new super-creamed Crisco by the following recipes you will never make them with anything else. And think of the money you save by not having to use butter.

SUCCESS SECRETS

1. Use level measurements.
2. Sift flour before measuring.
3. Gather all ingredients together and grease cake pan with Crisco before starting to mix cake.
4. Cream Crisco and sugar together thoroughly—on this depends a good-textured cake.
5. Beat cake batter from one to three minutes, after all the ingredients are in. Rich cakes require longer beating than plain cakes.
6. Don’t let cake batter stand around after mixing. Have oven at correct temperature and put cake in at once.
7. When baking without a thermometer, or oven regulator, divide the baking time into quarters, as:
   1st quarter—Cake batter should rise.
   2nd quarter—Cake should continue to rise and begin to brown.
   3rd quarter—Rising should be completed and cake continue to brown.
   4th quarter—Cake should “settle” and shrink from pan.

8. When cake is done—
   (a) It will spring back when pressed lightly with the finger.
   (b) It shrinks from the sides of the pan.

9. Cool cake quickly—on wire rack—but do not let it dry out.

10. Frost cake as soon as cool.

11. Keep leftover egg whites covered and in a cool place so that they will not dry out.

12. Plan to use up plain cakes quickly as they become stale sooner than rich cakes made with several eggs and plenty of Crisco.

If you have a favorite cake recipe of your own calling for butter, use Crisco instead and double the amount of salt. If no salt is called for use one-quarter teaspoon to each cup of flour.

Pastry

THE proof of the pudding is in the eating and the proof of the pastry, too. There are pastries and pastries, all built on the same simple foundation of flour, shortening and water with a dash of salt, yet varying in results all the way from the young bride’s first soggy pie to the experienced housewife’s light-as-thistledown puff paste.

Two important principles underlie pastry making. They are short and easily remembered. In colloquial language they are, “Keep the water out” and “Get the air in.” In other words, pastry that is made with too much water is tough and hard, while pastry that is kneaded and prodded and crushed beneath a rolling pin makes a fine substitute for shoe leather.

So when you make pastry use the smallest amount of liquid that will hold the ingredients together.

Then handle it quickly and gently. There is an old ballad which goes:

“Would you gain the tender creature
Gently, softly, kindly treat her,“

and pastry is just like that. A heavy touch spoils everything. Air must be worked into pastry, not forced out of it, for when the heat of the oven is applied the air will expand and make a light, air-filled crust.

Closely related to the question of liquid in pastry is the amount and kind of shortening used. Generally speaking, the less water and the more shortening, the more tender the pastry will be.

Flakiness is somewhat dependent on the temperature of the shortening. If a very flaky crust is desired, the Crisco should be thoroughly chilled before using. Instead of melting and contributing its share of moisture to the dough, it remains in tiny pieces which melt only in the heat of the oven and produce the
Be sure the ingredients for pastry are very cold. Cut the Crisco into the flour with a knife until the flour appears mealy, that is, until the Crisco is cut into very fine pieces and is thoroughly mixed through the flour.

In making Puff Pastry, most of the Crisco, instead of being cut into the dough is shaped into a flat circular piece and rolled and folded in, in order to enclose as much air as possible. (See Puff Paste recipe, page 179)
much-desired "shortness." Some people find it worth while to keep a small can of Crisco in the refrigerator just for this purpose. If a short, mealy crust is preferred it is better not to chill the Crisco, but rather to work it into the flour in its natural soft, creamy state. Whether you chill it or not, you will find that the new super-creamed Crisco makes all pie crust more delicious and digestible, more tender and easier to cut.

There are two classes of pastry—plain pastry and puff pastry. In the latter most of the shortening instead of being cut into the dough is rolled and folded in. Puff pastry is more complicated than plain pastry. It is a *de luxe* product which the novice may hesitate to undertake, but once the art of making it is acquired, it offers all sorts of delightful possibilities and adds very much to a housewife's prestige as a cook.

The baking of pastry plays a very important part in its success. The colder the pastry when it goes in the oven, the flakier it will be. The oven should be hot enough to start it rising quickly, then the heat reduced for the remainder of the time in order that the filling may be thoroughly cooked. The upper crust of covered pies should be pricked to allow the steam to escape. The edges may be trimmed with a sharp knife and a fancy edge made by pinching with the fingers, or you may buy a little cutter that trims and makes a fancy edge at the same time.

When you are baking the empty shell for an open pie be very careful not to stretch the pastry as you lay it over the pan. Ease it in gently and trim it off a little beyond the edge of the pan to allow for shrinkage. Prick the bottom and side with a fork so that it will not blister while baking.

**SUCCESS SECRETS**

1. Use level measurements.
2. Sift flour before measuring. Use a reliable pastry flour if you cannot make good pastry with ordinary bread flour.
3. *All* pastry ingredients must be very cold.
4. Use only enough water to hold ingredients together. On this depends the tenderness of the pastry.
When baking the empty shell for an open pie be careful not to stretch the pastry as you lay it over the pan. Ease it gently and trim it off with a sharp knife a little beyond the edge of the pan.

Patty shells or tarts may be made of plain or puff pastry. Cut rounds of pastry and bake over the bottom of inverted pans; or line tart pans with the pastry and prick bottom and sides with a fork.

Brown Betty (Recipe on page 193)

Apple Delights (Recipe on page 190)
5. Handle pastry as little and as quickly as possible. Do not knead it with the hands.
6. Roll pastry out with a light, quick motion of the rolling pin.
7. Dust the board with flour when necessary, but use no more flour than is absolutely necessary to keep pastry from sticking.
8. Brush the lower crust of juicy fruit pies with white of egg before putting in the filling. It prevents a soggy under crust.
9. Bake pastry shells (without filling) in a quick oven. Prick them well with a fork so crust will not blister while baking.
10. Cool pastry shells before putting the filling in.
11. Crisco is the best shortening for pastry because it will remain solid at ordinary room temperature. The fat for good, flaky pastry should be cut through the flour into very tiny particles and never allowed to melt before it reaches the oven.
12. Pastry will keep in the ice box covered with wax paper for two or three days—or even longer in cold weather.

**PLAIN PASTRY**

| 2 cups flour | 3/4 teaspoon salt | 3/4 cup Crisco | Cold water |

Mix and sift flour and salt. Cut in the Crisco with a knife. Add only water enough to hold the ingredients together. Do not knead. Divide dough in 2 parts and roll out thin on a slightly floured board. Line a pie pan with one-half the pastry. Pinch pastry with the fingers to make a fancy edge and prick bottom and sides with a fork. Bake in a very hot oven (460 degrees F.) 10 to 15 minutes. For a 2 crust pie, line pie pan with pastry, put in a filling, cover with top crust and bake as directed for pies.

If a less rich pastry is desired, use only 1/2 cup Crisco.

**DANISH PASTRY**

| 2 1/2 cups flour | 1 1/2 teaspoons salt | 3/4 cup Crisco | 1 egg |

Ice water

Mix and sift flour and salt. Cut in Crisco with a knife. Add beaten egg and only enough water, a few drops at a time, to make the paste hold together.
Chill. Break off small pieces of paste, roll out on floured board to $\frac{3}{8}$ inch thickness and fit over inverted muffin pans. Trim to fit. Prick with a fork and bake in a quick oven (425 degrees F.) 10 to 15 minutes.

**FLAKY PASTRY**

2 cups flour  
1 teaspoon salt  
$\frac{3}{4}$ cup Crisco  
Cold water

Mix and sift flour and salt. Cut in 2 tablespoons of the Crisco with a knife. Add enough water to make a stiff dough. Roll out in an oblong piece on a slightly floured board and dot with bits of Crisco, using $\frac{3}{4}$ the remaining quantity. Fold over ends to the center and fold again to make 4 layers. Press ends together and roll out. Dot again with Crisco, fold and roll. Repeat this process a third time. Chill thoroughly.

This pastry may be used wherever plain pastry is called for.

**PUFF PASTE**

2 cups flour  
$1\frac{1}{2}$ teaspoons salt  
1 cup Crisco  
Water

Mix and sift flour and salt. Cut in 2 tablespoons of the Crisco with a knife. Add only enough water, a few drops at a time, to make the paste hold together. Knead the dough 5 minutes, cover and chill. Roll out to $\frac{3}{4}$ inch thickness, keeping the paste a little wider than long and corners square. Place remaining Crisco, softened and shaped into a circular piece in center of one-half of paste. Fold other half over it, pressing edges firmly to enclose as much air as possible. Fold right side over and left side under the enclosed Crisco. Chill. Roll out, keeping the paste always rectangular in shape and rolling away from you. Fold ends towards center, making 3 layers. Chill. Roll out, fold again, chill and repeat process 4 times. (Paste is better made the day before it is baked and should be icy cold when put in the oven.)

**PATTY SHELLS**

Roll out Puff Paste to $\frac{3}{8}$ inch thickness. Cut with a round cutter, floured. Remove centers from $\frac{1}{2}$ of these circles with a smaller cutter. Wet the edges of the whole circles and place the rings on them. Brush the tops carefully with slightly beaten egg mixed with 1 tablespoon water, taking care not to moisten the sides. Desserts and Sauces

DESSERT is the topping off of the meal, and the family’s hunger having been satisfied, the homemaker is justified in giving rein to her imagination for this course. The recipes in this chapter are, some of them, practical; others are a bit of fluff. But they are all good.

If the first part of your meal consists of rather heavy food you will choose one of the lighter desserts, Bavarian cream, pineapple sherbet or boiled custard pudding. Pie or pudding would be a bad aftermath for a hearty feast, although on high days and holidays some latitude would be permissible. For the ending of a light meal your children (including your husband!) would rejoice at brown Betty or steamed chocolate pudding.

Fruits have become more and more popular as desserts since we realized their very real value as a food. Yet, having learned this lesson, we are apt to depend upon the fresh fruits and to neglect the dried fruits which are available in all places and at all seasons. Made into steamed puddings, whips, sherbets, jellies, tapioca and cornstarch combinations they lend endless variety to your dessert repertory.

A sauce gives even the simplest pudding a festive air and the housewife who wants to be ready for the unexpected guest or to keep her family’s appetite whetted will learn how to make some of the good pudding sauces. Sauces are either hard or liquid, the latter offering many varieties with a basis of fruit juices, egg, cornstarch, chocolate, or caramel.

Crisco may be used successfully in any of these and makes a rich, delicious sauce; and the nicest part about it is that you can make a large enough quantity to satisfy the sweetest tooth in your household without going bankrupt for butter.
SUCCESS SECRETS

1. Choose a light dessert to serve after a hearty meal.
2. Serve cold desserts thoroughly chilled; hot desserts very hot.
3. Unmold a gelatine dessert before serving. To do so loosen the edge slightly with a pointed knife, then turn upside down on the plate or platter on which it is to be served.
4. Don’t have gelatine mixtures too stiff. When too much gelatine is used the dessert will be tough and rubbery.
5. Cook custards over hot water, stirring constantly. If custard separates, remove it from the fire and beat with an egg beater to "bring it back" again.
6. Do not fill the molds for steamed puddings more than three-quarters full as the mixture will rise in the can.
7. Keep the water boiling in the vessels in which you steam puddings. If more water is needed during the cooking add boiling water.
8. Vary the same desserts by garnishing with whipped cream, marshmallows or chopped nuts, or serving with a different sauce.

CANDY

Chapter XX

Candy

AMERICANS spend something over seven dollars per capita each year for candies and confections, and the candy shops increase and flourish. The skilled candy-maker consequently has a real asset at her command, whether she uses it commercially or merely to give pleasure to her family and friends.

Home-made candy does not mean amateur candy. If one takes the trouble to master a few of the bed-rock rules of candy-making, luck gives way to assured success.

A thermometer is essential if you go in for candymaking on any scale, because cooking to just the right temperature is the first principle of success.

Fudge with its variations is by all odds the most popular of home-made candies and anyone can acquire the simple art of making it. Just be careful not to overcook it and you will have a smooth, creamy candy, instead of the grainy kind from which we have all suffered. If a little corn syrup is added—about two tablespoons to two cups of sugar—an unusually nice texture will result and the fudge will keep fresh longer.

Let the candy cool before beating it, because beating it when it is very hot also tends to make it grainy.

Crisco used in candy gives delightful results and you can use large quantities without extravagance. A little salt should be added to the candy.

Home-made confections always make a much-appreciated gift. There are any number of varieties such as caramels, nut brittles and even fudge and penuchi which can be made in advance of the last of the Christmas rush.

[199]
A thermometer is essential if you go in for candymaking, because cooking to just the right temperature is the first principle of success.

SUCCESS SECRETS

1. Cook candy in a perfectly smooth saucepan large enough to allow it to "boil up."
2. Cook creamy candies without stirring after the sugar has dissolved.
3. Wash down sugar crystals from side of pan with cheesecloth wrapped on a fork and dipped in cold water.
4. Cool creamy candies before beginning to beat. This will prevent sugaring.
5. For taffies and brittles stir only enough to keep candy from burning.
6. Use a candy thermometer, if possible; if not, drop a little of the mixture into cold water and test as follows:
   - Soft Ball...............236 to 240 degrees F.
   - Firm Ball...............242 to 248 degrees F.

[200]
Hard Ball.............. 250 to 265 degrees F.  
Brittle.................. 270 to 290 degrees F.  
Very Brittle............. 295 to 310 degrees F.  

7. Fudge and Penuchi kept in tightly covered cans will remain fresh for two weeks.  
8. Wrap caramels as soon as they are cold.  
9. Heat nuts before using to give them a sweet flavor.  
10. Break nuts for candy instead of chopping them. When chopped the fine particles cloud the candy.

Put popped corn in a large bowl and sprinkle with salt. Pour the hot syrup over it and mix thoroughly. Shape in small balls, wrap in wax paper.

SALTED ALMONDS

Blanch 1/2 pound shelled almonds in boiling water and remove skins. Put 1 teaspoon Crisco in a pie pan and place in a hot oven (375 degrees F.). When it is melted put the almonds into it and stir until well coated with Crisco. Cook until a delicate brown, stirring often so that they may brown evenly without burning. Drain on unglazed paper and sprinkle with salt. Do not enclose in box or tin until perfectly cold.

Almonds may also be browned in deep Crisco, drained and salted.
IT OFTEN happens that it is the busiest housewife who is called on most frequently for "outside" duties such as taking charge of church suppers, class luncheons or the men's club dinner.

A difficulty likely to confront her at the outset is the lack of adequate oven and stove-top space for cooking for fifty or more persons. So she must plan the menu with this in mind. Questions like marketing, serving, and collecting china, silver and linen for such a hungry mob fade into insignificance before the actual cooking!

If, then, lack of equipment or cooking space is a factor she must plan a meal for which part of the food may be prepared beforehand. Such things as pies, cakes and doughnuts may be made outside and brought in at serving-time. The menu should consist of at least one hot dish and a hot beverage, and if it is possible to bake hot biscuit or rolls, they will cause blessings to be showered on your head. The rest of the food may be cold—salads, cold meats, relishes and desserts, of which last ice cream and pie know no rivals.

The planning and ordering for a large number of people should be done as far ahead as practicable so that materials will be on hand and any gaps filled before the last minute. If roasts or hams are to be served they may be partly cooked the day before, the hams boiled and prepared with spices and sugar for a final baking. Beans may always be baked the previous day and reheated with no loss of flavor or delicacy. Macaroni dishes may be made ready for the oven, and vegetables may be prepared for boiling early in the day and allowed to soak in cold water. The ingredients for salad may be prepared and left in the ice box to chill.
Although most recipes may be doubled with very satisfactory results it is not always possible to increase them successfully in any larger proportion than that. There are many scientific reasons for this and it is well to realize that a fresh start must be made with a reliable recipe which has been worked out on a larger scale.

In large quantity cooking the ingredients should be of the best grade or the finished product will tell the tale. Crisco is an invaluable ally in the church or club kitchen. It may be bought in large cans and kept over from one affair to the next without danger of becoming rancid.

**SUCCESS SECRETS**

1. Plan menus with reference to the equipment available and the amount of stove space on which to cook.
2. Do as much preparation as possible the day before.
3. Use large shallow pans rather than deep ones for baking and so hasten the process.
4. Bake cakes in large sheets—allow them to cool in the pan, frost, and cut in squares for serving.
5. Keep a new clothes boiler for making coffee. To serve, dip out with large pitcher and fill cups before putting them on the saucers.

*Recipe given in this chapter.*
IN THE heart of every true homemaker lies the desire to be a good hostess. It is as natural as the desire to be beautiful!

There are still occasions and meals that call for formality and ceremony, but they are becoming more and more rare. Whether you aspire to entertain formally or merely to gather a few congenial friends around your table or hearth, or perhaps just to give your family a special treat once in a while when you have a little extra time, you will want to be able to prepare some one food superlatively well.

Perhaps you have a “knack” for cooking desserts, or meats or salads, or hearty, heartening vegetables. Or perhaps you are a terribly busy person who has budgeted your time so carefully that you can give only a few minutes to “very special” cooking.

Whichever you are, you will find in this little chapter some one specialty dish that appeals to you. We have selected one or two that are appropriate for Sunday night suppers, for afternoon teas, for party luncheons, a man’s dinner, chafing dish parties, weddings and birthdays. Each of them is delicious and not at all hard to prepare.
PLANKED STEAK

The steak should be 1 1/2 inches thick. Put on a broiler well greased with Crisco. Spread steak with Crisco and season with salt and pepper. Broil over a quick fire about 12 to 15 minutes, turning every few minutes. Heat the plank, grease with Crisco and put the steak on it. Put Duchess Potatoes (page 108) around the edge with a pastry tube. Arrange Stuffed Onions (page 107) and Baked Stuffed Tomatoes (page 111) around steak. Brush tops of potatoes and onions with beaten egg yolk, diluted with 1 tablespoon milk. Place in a hot oven (400 degrees F.) and cook about 6 to 8 minutes to brown the potatoes and finish cooking the steak. Take from the oven and arrange hot cooked carrots, string beans and peas inside the potato border.

Serve at once with Mushroom Sauce (page 115).

PLANKED BLUEFISH

Fish plank
Blue fish (3 1/2 to 4 lbs.)
2 tablespoons Crisco
3/4 teaspoon salt
1/8 teaspoon pepper

A fish plank should be made of hard wood, about 16 inches long and 12 inches wide. Heat plank very hot and grease with Crisco. Remove head and tail of fish. Split and clean. Place on the plank, skin side down. Spread with melted Crisco and sprinkle with salt and pepper. Place under the broiler and cook 15 to 20 minutes, depending upon the size of the fish. Decorate with Duchess Potatoes (page 108) put through a pastry bag. Return to oven and cook until potatoes are brown. Garnish top of fish with chopped parsley and slices of lemon. Arrange hot cooked carrots, creamed Brussels sprouts and pickled beets cut in fancy shapes, inside the potato border. Serve from the plank.

LOBSTER PATTIES

Follow recipe for Boiled Lobster (page 84). Crack claws and remove meat. Discard the stomach which lies under the head, also the woolly gills. Save the fatty green substance and coral (if any) to mix with the meat. Pick out all the meat and cut in uniform pieces. To 2 cups of lobster add 2 cups Medium White Sauce (page 113) using 1 cup thin cream in place of 1 cup of the milk and heat thoroughly. Add 1 tablespoon chopped parsley and 1 well-beaten egg yolk before taking from the fire. Serve in Patty Shells (page 179). Garnish with watercress.

SHRIMP NEWBURG

2 tablespoons Crisco
1 1/2 tablespoons flour
3/4 teaspoon salt
Few grains cayenne
1 tablespoon sherry flavoring

1/2 cup cream
3/4 cup milk
2 cups cooked shrimps
2 egg yolks

Melt Crisco, add flour, salt and cayenne and mix well. Add cream and milk gradually and bring to the boiling point, stirring constantly. Add shrimps.
Just before serving add the beaten egg yolks and flavoring. Serve on rounds of Puff Paste (page 179). Garnish with parsley and thin strips of pimento.

**SWEETBREADS BÉCHAMEL**

| 2 pairs sweetbreads | 4 tablespoons flour  |
| 1 sprig parsley | 1 cup stock |
| 1 stalk celery | 1 cup rich milk |
| 1/2 teaspoon salt | 1 tablespoon chopped parsley |
| 2 tablespoons salt Crisco | 1 egg yolk |

Soak sweetbreads in salt water for 1 hour. Drain. Put in saucepan with parsley, celery and salt and enough water to cover. Bring to boiling point. Reduce heat and cook slowly 30 minutes. Strain off and measure the stock. Discard the fat and connective tissues from the sweetbreads and cut them in small pieces. Melt Crisco, add flour and stir until blended. Add milk and stock and stir until thick. Add sweetbreads and keep hot over hot water. Add parsley and beaten egg yolk just before serving. Serve in Croustades (page 51) or on points of toast.

**ARTICHOKES HOLLANDAISE**

Cut stem and tough outside leaves from French artichokes. Remove the thistle-like center or "choke." Soak in salted water 1/2 hour. Boil about 25 minutes in salted water to which 1 tablespoon vinegar has been added. Drain. Serve with Hollandaise Sauce (page 115).

These may be served cold with cold Hollandaise.

**BRIOCHE**

| 1 cup milk | 1 yeast cake |
| 1/2 cup Crisco | 2 tablespoons lukewarm water |
| 1/2 cup sugar | 3 eggs |
| 1 1/2 teaspoons salt | 1 teaspoon lemon extract |
| 4 1/2 to 5 cups flour |

Heat milk and add Crisco, sugar and salt. When lukewarm add the yeast cake dissolved in warm water. Add 1 cup flour and beat thoroughly. Cover and set in a warm place to rise until light—1 hour. Add beaten eggs and lemon extract and enough flour to make a firm dough. Knead on a slightly floured board until smooth and elastic to touch. Roll out to 3/4 inch thickness into a rectangular shape. Spread lightly with melted Crisco. Fold edges to the center and fold again. Cover and set in a warm place to rise until light. Cut in pieces 1/2 inch wide. Twist each piece from the ends in opposite directions. Bring ends together and press into center of strip. Put on a greased pan 1 inch apart. Cover and set in a warm place to rise. Bake in a hot oven (400 degrees F.) 15 to 20 minutes. While hot spread with 2 cups confectioners' sugar moistened with a little milk and flavored with vanilla.

This recipe makes about 24 brioche.
The characteristic shape of French Brioche is obtained by twisting small pieces of dough in opposite directions, bringing ends together and pressing them into center of strip.

ORANGE BISCUITS

2 cups flour  
4 teaspoons baking powder  
½ teaspoon salt  
4 tablespoons Crisco  
½ tablespoon grated orange rind  
⅛ cup milk  
Juice of 1 orange

Mix and sift flour, baking powder and salt. Cut in Crisco with a knife or rub in with the finger tips. Add orange rind and enough milk to make a soft dough. Roll out on a slightly floured board to ½ inch thickness. Cut with a biscuit cutter. Dip loaf sugar in orange juice. Put a piece of sugar on each biscuit. Bake in a quick oven (425 degrees F.) 10 to 15 minutes.

(Cut with a small cutter, these biscuits are most attractive for afternoon tea.)

This recipe makes 12 biscuits.

FRUIT SALAD

1 grapefruit  
3 oranges  
1 banana  
3 slices pineapple  
½ pound Malaga grapes

Peel grapefruit and oranges. Remove sections, discarding the white membrane. Cut banana and pineapple in small pieces. Skin grapes and remove seeds. Mix all the fruit together. Drain. Pile lightly on heart leaves of lettuce. Serve with Pineapple Dressing.

[215]
PINEAPPLE DRESSING

| 4 tablespoons flour | 1 tablespoon Crisco |
| 3 tablespoons sugar  | 2 eggs |
| Juice from 1 can sliced pineapple | 1 cup cream, whipped |

Mix flour and sugar, adding pineapple juice a little at a time, until the mixture will pour. Heat remaining juice and add flour mixture. Cook directly over fire, stirring until slightly thickened. Place over hot water, add Crisco and well-beaten eggs. Cook again until quite thick, stirring constantly. Chill. Fold in whipped cream just before serving.

COFFEE MOUSSE

| 2 cups cream | 1/2 cup powdered sugar |
| Few grains salt | 1/2 cup strong coffee |
| 1 tablespoon mocha essence |

Whip the cream, sugar and salt together until stiff. Add coffee and mocha essence and mix well. Turn mixture into a mold. Cover tightly. Pack in 1 part rock salt to 3 parts finely cracked ice and let stand 4 or 5 hours. Serve with whipped cream.

CHOCOLATE MOUSSE

Follow recipe for Coffee Mousse, using 2 ounces melted unsweetened chocolate instead of coffee. Add 1 teaspoon vanilla instead of mocha essence.

FRUIT MOUSSE

Follow recipe for Coffee Mousse and add two cups slightly sweetened, chopped and drained fruit and 1 teaspoon vanilla, omitting the coffee and mocha essence.

MOCK NESSELRODE PUDDING

| 21/2 tablespoons gelatine | 3/4 cup chopped raisins |
| 1 cup cold milk | 10 macaroons, rolled |
| 4 egg yolks | 1 teaspoon vanilla |
| 3/4 cup sugar | 1/2 teaspoon almond extract |
| 3 cups scalded milk | 2 tablespoons sherry flavoring |

Soak gelatine in cold milk 5 minutes. Beat egg yolks and sugar together and pour the scalded milk on them. Put in a double boiler, or over hot water and cook, stirring constantly until custard coats the spoon. Add gelatine and milk and stir until dissolved. Take from the fire and add raisins, macaroon crumbs, vanilla, almond extract and sherry flavoring. Mix well. Fold in stiffly beaten egg whites. Set in a pan of ice water and beat until thick. Pour into a mold which has been dipped in cold water and chill thoroughly. Turn out of mold onto a plate and decorate with whipped cream and Maraschino cherries.
CHOCOLATE SOUFFLÉ

2 tablespoons Crisco  
3 squares unsweetened chocolate  
3 tablespoons flour  
3 tablespoons hot water  
1 cup milk  
3 egg yolks  
½ cup sugar  
1 teaspoon vanilla  
½ teaspoon salt  
3 egg whites

Melt Crisco, add flour and mix well. Add milk gradually and bring to the boiling point, stirring constantly. Add sugar, salt and melted chocolate which has been mixed with the hot water. Cool. Add egg yolks and beat well. Add vanilla and fold in the stiffly beaten egg whites. Pour into a greased baking dish. Set in a pan of hot water and bake in a moderate oven (325 degrees F.) 50 to 60 minutes. Serve immediately with Custard Sauce (page 197), or whipped cream.

CREAM PUFFS

½ cup Crisco  
1 cup water  
1 ½ cups flour  
5 eggs

Put Crisco and water in a saucepan and bring to the boiling point. Add flour and mix well. Cook 2 minutes, stirring constantly. Cool. Add eggs one at a time beating after each egg is added. Beat for 5 minutes. Drop by tablespoons on a greased shallow pan 2 inches apart. Flatten with back of spoon into circles, leaving center a little thicker. Bake in a moderate oven (350 degrees F.) 30 to 35 minutes. Cool. Make a slit with a sharp pointed knife near the bottom of the puff and fill with Cream Filling (page 170), or whipped cream.

ECLAIRS

Follow the recipe for Cream Puffs. Press the dough through a pastry bag onto a greased shallow pan, making strips 4 inches long and 1 inch wide and keeping them 2 inches apart. Or bake in greased lady finger pans.

MERINGUE CAKE

6 egg whites  
1 teaspoon vinegar  
2 cups sifted granulated sugar  
Few grains salt  
1 teaspoon vanilla

Beat egg whites until stiff, add sugar, 1 tablespoon at a time, then vinegar, salt and vanilla, beating constantly (about 30 minutes altogether). Cover bottom of 2 round pans with 2 layers of wet wrapping paper. Pour in the egg mixture and bake in very slow oven (250 degrees F.) 45 minutes to 1 hour. Serve with preserved fruit, whipped cream or ice cream between the layers, and whipped cream on top.

This meringue may be made in individual portions,
BIRTHDAY CAKE

\[
\begin{align*}
\frac{1}{2} \text{ cup Crisco} & \quad 1 \text{ teaspoon salt} \\
\frac{3}{4} \text{ cups sugar} & \quad 3 \text{ teaspoons baking powder} \\
3 \text{ eggs} & \quad \frac{3}{8} \text{ cup milk} \\
2\frac{1}{4} \text{ cups flour} & \quad 1 \text{ teaspoon almond extract}
\end{align*}
\]

Cream Crisco, sugar and eggs together. Mix and sift flour, salt and baking powder and add alternately with the milk to the first mixture. Add almond extract and beat thoroughly. Pour into a greased tube pan. Wrap a button, thimble, ring and dime in separate pieces of wax paper and put into the cake batter. Bake in a moderate oven (350 degrees F.) 50 to 60 minutes. Cover and decorate with Ornamental Frosting (page 167).

WEDDING CAKE

\[
\begin{align*}
\frac{1}{2} \text{ pound Crisco} & \quad 1 \text{ tablespoon mace} \\
\frac{3}{4} \text{ pound brown sugar} & \quad \frac{1}{2} \text{ tablespoon ginger} \\
6 \text{ eggs} & \quad \frac{1}{2} \text{ tablespoon clove} \\
\frac{3}{4} \text{ cup molasses} & \quad 3 \text{ pounds raisins} \\
1 \text{ cup grape juice} & \quad 1 \text{ pound currants} \\
\frac{3}{2} \text{ cup flour} & \quad \frac{1}{2} \text{ pound lemon and orange peel, chopped} \\
1\frac{1}{2} \text{ tablespoons cinnamon} & \quad \frac{1}{2} \text{ pound citron, chopped}
\end{align*}
\]

Cream Crisco and sugar together. Add the beaten eggs, molasses and grape juice and mix well. Mix and sift flour, cinnamon, mace, ginger and clove. Add enough of the sifted flour mixture to the fruit to keep it from sticking together. Add remaining flour and fruit to the first mixture and beat thoroughly. Line bottom of a large round pan with greased paper and grease sides of pan. Pour mixture into it and bake in a very slow oven (225 degrees F.) 3 to 4 hours. A small pan of water in the oven helps to keep the cake from burning during the long cooking. Ice and decorate with Ornamental Frosting (page 167).

ROLLED PECAN WAFERS

\[
\begin{align*}
\frac{1}{2} \text{ cup Crisco} & \quad 4 \text{ tablespoons flour} \\
1 \text{ cup brown sugar} & \quad \frac{1}{2} \text{ cup pecans, chopped} \\
2 \text{ eggs} & \quad \frac{1}{2} \text{ teaspoon salt} \\
& \quad \frac{1}{2} \text{ teaspoon maple flavoring}
\end{align*}
\]

Cream Crisco and sugar together. Beat in eggs, one at a time. Stir in flour and mix well. Add nuts, salt and flavoring. Drop by teaspoons on greased cooky sheet about 5 inches apart. Spread out very thin with back of spoon. Bake in slow oven (300 degrees F.) 10 to 12 minutes. Remove with a spatula or broad-bladed knife and roll while hot over round handle of wooden spoon. If the cookies get too cool to roll, reheat in oven. (If difficulty is found in rolling, they may be served as wafers.)

This recipe makes about 36 rolls.
**SCOTCH FANS**

1 cup Crisco  
$\frac{3}{4}$ cup brown sugar  
$\frac{2}{3}$ cups flour  
1 egg yolk  
1 teaspoon salt

Cream Crisco and sugar together. Add flour and salt and knead until ingredients hold together. Roll out on slightly floured board to $\frac{3}{4}$ inch thickness. Cut in circles with large fluted cooky cutter, then cut each circle in 3 fan shaped pieces. Brush with egg yolk diluted with 1 tablespoon water. Bake in a slow oven (300 degrees F.) 15 to 20 minutes.

This recipe makes about 30 fans.

**HAZELNUT COOKIES**

$\frac{1}{4}$ pound sweet chocolate  
$\frac{1}{4}$ pound finely chopped hazelnuts  
$\frac{1}{4}$ pound finely chopped almonds  
$\frac{2}{3}$ cup powdered sugar  
2 egg whites  
$\frac{3}{4}$ teaspoon cinnamon  
Few grains ground clove  
2 tablespoons melted Crisco

Melt chocolate over hot water. Add chopped nuts and sugar and mix well. Add stiffly beaten egg whites, spices and Crisco. Mix well. Chill. Roll out thin, a small quantity at a time, on slightly floured board. Cut with cooky cutter. Place on greased pans and bake in moderate oven (325 degrees F.) 12 to 15 minutes.

This recipe makes about 50 cookies.
