To the Housewives of America

We have published this book to illustrate the many practical and simple ways in which canned fruits and vegetables may be utilized in the preparation of delicious dishes and combinations. Most canned foods are ready for consumption and make tempting dishes just as they come from the can, but their greatest value to the modern housewife lies in the unlimited possibilities they offer her for adding variety and novelty to the every-day menu.

We have not attempted to develop new and elaborate uses for canned fruits and vegetables. On the contrary, we have endeavored to collect and classify better and more practical suggestions and recipes for using each variety. All of them are simple, inexpensive, easy to make, and at the same time, are designed to keep the menu healthful and appetizing in the highest degree.

Our aim has been to make the book a ready and convenient form of reference for everyday use. As such, we hope it may prove of practical value to every woman who is interested in serving tempting, wholesome foods at economical cost.

The Economy of Del Monte Canned Foods

Aside from their uniform high quality, delicious flavor, and natural wholesomeness, the convenience and practical economy of Del Monte Products are added recommendations for their general use today.

In most localities, it is more economical to buy Del Monte Canned Fruits and Vegetables than to attempt to preserve them at home, or even to use the fresh product. In the first place all Del Monte Products are the pick of the finest crops—such as you could not hope to always obtain in the fresh fruit and vegetable markets. Then again, there is no waste to them. All the work of preparation has been done, and they reach your table—pure, wholesome, delicious—and in most cases ready to use as they come from the can. When you consider, for instance, that a quarter peck of
fresh vegetables such as peas or tomatoes is required to make the contents of one can, it does not require much figuring to ascertain which is the more economical way to buy them. A comparison of the price of almost any raw product with that of the canned article will usually suffice to demonstrate the real economy of DEL MONTE Canned Foods. And that, without even considering your own time and labor and the cost of fuel.

Perhaps the best proof of the economy of canned fruits and vegetables is to be found in the fact that the finest hotels and restaurants use canned fruits and vegetables almost exclusively in preference to the fresh product—the whole year round—in season and out of season.

And the enormous quantities of canned goods used in the hospitals, where the cleanliness and nutritive values of the patients' food must be carefully watched, again attests the merits of the packaged product.

What is true of the hotels is even more applicable to the home, where the woman is necessarily obliged to buy her raw materials in smaller quantities, from a smaller selection, and at correspondingly higher prices.

**Why DEL MONTE Canned Foods Are Better Than Most Fresh Fruits and Vegetables**

In many respects DEL MONTE Canned Fruits and Vegetables are distinctly superior to the best fresh products obtainable anywhere, at any season. Fresh fruits are almost invariably picked before they are ripe in order to avoid spoilage and loss in shipping. Most fruits and vegetables undergo a decided cellular change which makes them tough and fibrous when picked and allowed to stand for even a few hours.

Take pineapple, for instance. Grown in the tropics for shipment to the north, the fruit must be picked green. Allowed to ripen after it is picked, the pineapple never attains its true flavor, but reaches the table tasteless and woody.
The tender, juicy pineapple that you get under the DEL MONTE label, canned ready to serve, is grown, ripened and packed fresh from the fields in sunny Hawaii within a few hours after it is picked. All the lusciousness, flavor and delicacy that nature intended pineapple to possess goes into the fruit before it is picked, and every bit of that goodness is imprisoned in the DEL MONTE can for your future enjoyment. Is there any wonder, therefore, that DEL MONTE canned Hawaiian pineapple should be so infinitely superior to the fresh fruit obtainable anywhere outside of the tropics?

The same thing applies to other DEL MONTE fruits as well as vegetables which are noted for their unequalled delicacy of flavor, tenderness and uniform high quality.

No woman needs to be told how difficult it is to get fresh asparagus of uniform size and tenderness even at the height of the season—or how often the beans she buys are stringy and tough—that fresh peas are likely to be hard and unequal in size—and that it is almost impossible to get fresh fruits that are ripened to the same degree, some being still hard while others are too soft.

In DEL MONTE Canned Fruits and Vegetables all these uncertainties and disappointments are overcome for you, because of the far reaching care with which they are surrounded from the planting of the seed to the delivery of the finished product to your table.

Ask your dealer for DEL MONTE Canned Foods of Flavor. They will open up a host of tempting menu possibilities, that are as convenient and economical as they are delicious and wholesome.
This map shows at a glance the far-reaching influence of the DEL MONTE search for quality and flavor.

Each little white dot on the map represents an establishment where DEL MONTE Products are packed. Altogether there are 89 of them—each one located in some specially favored spot of the bountiful Pacific Coast, where soil and climate and other favoring conditions combine to yield certain products of finer flavor and finer quality than can be grown anywhere else.

All DEL MONTE fruits and vegetables are grown from finest stock, carefully tended by men whose life-long experience has been spent in perfecting the varieties best suited for canning. All are “packed where they ripen the day they are picked.”

That is why DEL MONTE quality is highest quality—why the red DEL MONTE shield is your guarantee of finest flavor in everything that bears it.

Ask your dealer for DEL MONTE Foods of Flavor. They offer you endless menu variety—hundreds of delicious, healthful, easy to prepare foods that everyone enjoys.
What You Ought to Know About Canned Foods in General and DEL MONTE Products in Particular

To use canned food products intelligently, economically and to the best advantage, every housewife should know something of the processes involved in their commercial production. Canning is the method by which food is preserved. In its highest development it is the preservation of food in as nearly its natural condition as possible, or in the condition in which it is generally used.

This is accomplished solely through the use of that great natural sterilizing agent—heat—and heat alone. There are no artificial preservatives of any kind needed or used in canning fruits and vegetables. Each product is processed, hermetically sealed in cans and then heated to the temperature and for the time required to secure perfect sterilization for each individual variety. This simplicity of method makes canning at once the safest, cheapest and most successful way to keep food in perfect condition until it is needed.

In principle there is no real difference between home and commercial canning. But the large canner has in reality many advantages over the housewife, all of which make for greater certainty of results and uniformity of quality. His first-hand choice of raw materials, his equipment for handling them in large quantities by special machinery, his accurate devices for grading as to size and quality, his standardized methods of processing, canning and sterilizing, as well as his exacting sanitary precautions in the handling and packing of each product, all give him an immeasurable advantage over the woman in the kitchen.

Quality in canned foods really begins with the production of the material—in the proper selection of variety and seed and in exercising a supervision and control over every stage
in the growth, cultivation, harvest and delivery of the fresh fruits and vegetables to the canning kitchens.

The raw product must be of first class quality in every respect, uniform in size and development, and at just the proper stage of ripeness or maturity, to secure the best results.

And after it is delivered, it must be carefully graded both for quality and size. In canning eternal vigilance is the price of quality, and only long experience equips men to select that which is suitable and reject that which is unfit.

Why DEL MONTE Quality is Highest Quality

The DEL MONTE ideal of quality in canned foods traces its origin to the early days of California.

Long before the transcontinental railway was built—when settlers were still making their way slowly across the country in prairie schooners or sailing 'round the Horn—the founders of the DEL MONTE business were already in California, canning and preserving the golden harvests of its most fertile valleys.

They were the first in the field.

They began as pioneers—in a new land and in a comparatively new industry—with very little capital but with a big ideal—an ideal, which, backed by the determined spirit of '49, has revolutionized the canning business and given the whole world better things to eat.

That ideal was to can the finest fruits and vegetables grown, and so to perfect the processes of canning that the finished product should retain its full natural flavor and freshness.

They believed that the way to secure the finest fruits and vegetables was to locate their canneries in those sections where soil and climate combined to produce Nature's best. And they believed further that, to preserve that natural goodness at its best, the ripe fruits should be "packed where they ripen the day they are picked."
That was the principle upon which the DEL MONTE business was started nearly 60 years ago. And that is the principle upon which it has grown and developed until today the California Packing Corporation is the largest canner of fruits and vegetables in existence and DEL MONTE Quality is recognized the world over as the standard of excellence in foods.

A Far Search for DEL MONTE Flavor

Fine flavor in fruits and vegetables is what "good breeding" is in people. One is just as much a matter of careful cultivation as the other. Both are developed only under the most favorable environment.

That explains why DEL MONTE'S 89 model canneries are situated in the most favored spots of Nature—each location selected for its special fitness to produce certain products of finer flavor and finer quality than can be grown anywhere else.

It explains further why the California Packing Corporation owns and operates thousands of acres of the most highly developed orchards and gardens in these favored sections—why the specialists who prepare DEL MONTE Products have spent their lives in improving old varieties and propagating new ones to perfect DEL MONTE Quality—why, in short, they devote their most vigilant attention to every stage in the growth, harvest and preparation of DEL MONTE Products, from the planting of the seed until the perfectly flavored fruits and vegetables are ready to be served on your table.

Please do not confuse the delicious flavor of DEL MONTE California Canned Fruits with some varieties of fresh California fruit, which are necessarily picked green and allowed to ripen on their long journey to market. For DEL MONTE Fruits are always matured and sun-ripened on the tree. And they retain all the fine flavor and delicate bouquet that kindest Nature can impart, because they are "packed where they ripen the day they are picked."
That is why you will find DEL MONTE model kitchens in the richest pineapple-growing sections of far-off Hawaii—in the fertile California delta lands of the Sacramento river where grows the world’s finest asparagus—in the finest peach orchards of the San Joaquin valley—among the famous apricot and prune orchards of the Santa Clara valley—in the raisin vineyards of Fresno—in Alaska, from whose cold, northern waters the choicest salmon are caught—as well as in all the other widely scattered locations where each particular variety develops its finest flavor and form.

And it is the same with DEL MONTE pears, plums, berries, cherries, grapes, beans, peas, tomatoes and all the other delicious varieties included in the DEL MONTE line. All are grown where they attain their finest flavors. In each is that delicious flavor preserved intact.

The DEL MONTE Label Your Guarantee of Quality

It is this strict adherence to an ideal established years ago, this painstaking attention to every detail in the preparation of the long line of DEL MONTE Products, that make the red DEL MONTE shield on the green can your absolute guarantee of finest quality in canned fruits, vegetables and other food products.

That is why America’s millions of discriminating women are careful to specify DEL MONTE when they order canned foods from their grocers, and why so many grocers take pains to recommend DEL MONTE to their customers who want the best.
Measurements and Sizes of Containers

Measurements and quantities of fruits and vegetables have been specified herein as 1 cup, ½ cup, etc., rather than 1 can, ½ can, etc. It might be well to say, however, that in preparing these recipes the generally recognized standard can of each particular variety has been used.

In most fruits, the No. 2½ can is the customary size found on the grocers' shelves; likewise, for such vegetables as tomatoes, pumpkins, etc. Such varieties as string beans, peas, corn, etc., are ordinarily and commonly sold in what is known as the No. 2 can. With proper judgment there should be no difficulty in preparing these recipes regardless of the size of can used if instructions are followed as to the measurements specified in the recipes.

A word or two on the sizes of containers, however, may be of assistance to the housewife in purchasing canned products intelligently.

The most important containers in which DEL MONTE Canned Fruits are packed are No. 2½, No. 2 and No. 1 Tall size cans.

The fruit in such varieties as Apricots, Peaches, Pears and Plums is graded for size, the large fruit being packed in No. 2½ cans, medium size fruit in No. 2, and fruit a trifle
smaller in No. 1 Tall. This grading for size does not affect the quality in the slightest degree, for, as a matter of fact, the smaller and medium sized fruit, when selected for quality and fully tree-ripened, as DEL MONTE is packed, is just as delicious as the larger size fruit which goes into No. 2½ cans.

The sizes of cans most customary in packing vegetables are the No. 2½ and the No. 2 round cans. Asparagus is packed in both square and round cans, the long spears in the large cans and the short spears or tips in the smaller ones. There are various styles of smaller containers used for such varieties as Tomato Sauce, Green Chile Peppers, Pimientos, etc., which the consumer soon becomes acquainted with and accustomed to, when purchasing such commodities.

The net contents will always be found specified on the labels. There is some variation, according to the variety of the product, but generally speaking the No. 2½ can will contain from 27 to 30 ounces net; the No. 2, from 18 to 20 ounces and the No. 1 Tall about 15 ounces.

**General Directions**

Level measurements should be used in all the recipes contained herein. Each recipe is large enough to serve six moderate-sized portions.

The sirup from DEL MONTE Canned Fruits may be used as sauce for puddings, fritters and pancakes; it is delicious in fruit punches and lemonade; it may be substituted for the liquid in frostings and icings and when so used, will require less sugar; it may be frozen for a sherbet, or heated and poured over ice cream for additional flavor. It may also be used in place of vinegar in French salad dressing to be served on a fruit salad.

The liquid from DEL MONTE Canned Vegetables should never be thrown away. It may be used as the basis for soups, as the liquid in cream or white sauce, and it will give additional flavor to all meat and vegetable stews.

As this liquid is rich in mineral salts it should always be utilized. By its use with the vegetables or in one of the ways mentioned above the full food value of the vegetable is retained.
All bread crusts and stale pieces of bread should be saved, dried, and put through the meat chopper to make crumbs.

Stiffly beaten egg whites should be combined with other ingredients by folding in with a cutting motion and not a stirring motion. The air which has been beaten into the egg white is thus prevented from escaping.

Gelatin should be softened in a small amount of cold water before it is dissolved in boiling water. Use in the proportion of $\frac{1}{2}$ cup of cold water for 1 envelope of gelatin.

White sauce or cream sauce should be smooth and creamy and free from lumps. To prepare it so that it meets all these requirements the following method has been found to be uniformly successful:

Melt the fat, or heat it, if a liquid fat is used. Remove from the fire and add the dry ingredients which consist of cornstarch or flour and the seasonings. When these are thoroughly mixed with the fat, add the cold liquid which may be milk or stock or water or a combination of two or of the three. Return to the fire and stir constantly until the boiling point is reached. Then if it is not to be used at once put in a double boiler to keep hot until ready to serve. The following proportions may be used for the two grades of sauce:

**Thin White Sauce (1 Cup)**
- $\frac{1}{2}$ tablespoon of fat
- 1 tablespoon of flour or cornstarch
- $\frac{1}{2}$ teaspoon of salt
- $\frac{1}{6}$ teaspoon of pepper
- 1 cup of liquid

**Thick White Sauce (1 Cup)**
- 1 tablespoon of fat
- 2 tablespoons of flour or cornstarch
- $\frac{1}{2}$ teaspoon of salt
- $\frac{1}{6}$ teaspoon of pepper
- 1 cup of liquid

**Mayonnaise Salad Dressing**

Beat an egg yolk until it is light, add 1 tablespoon of lemon juice or vinegar, $\frac{1}{4}$ teaspoon each of salt, mustard and paprika. Measure $\frac{1}{2}$ cup of olive or salad oil and add a table-
spoon at a time, beating constantly with a Dover egg beater. To increase the quantity a stiffly beaten egg white may be folded into the dressing just before it is served.

Any salad recipe calling for mayonnaise may be served with cooked salad dressing instead, if desired.

**Tartar Sauce**
Add 1 tablespoon each of chopped pimiento, chopped sweet pickle and chili sauce or catsup to mayonnaise.

**French Dressing**
Measure 2 tablespoons of powdered sugar, \( \frac{1}{2} \) teaspoon of salt and \( \frac{1}{4} \) teaspoon of paprika into a bowl. Add 2 tablespoons of vinegar and stir or beat until thoroughly mixed. Then add 4 tablespoons of olive or salad oil and, if desired, 1 tablespoon of Worcestershire sauce. Mix thoroughly by stirring or beating. French dressing should always be prepared just before it is served.

**Cheese Dressing**
Add 2 tablespoons of Roquefort, or grated dairy cheese, to French dressing.

**Cooked Salad Dressing**
Melt 1 tablespoon of butter, add 2 tablespoons of flour, \( \frac{1}{2} \) teaspoon of salt, \( \frac{1}{4} \) teaspoon of paprika, \( \frac{1}{2} \) teaspoon of dry mustard, and 1 tablespoon of sugar; when thoroughly mixed add \( \frac{1}{4} \) cup each of vinegar and water, bring to the boiling point stirring constantly, and cool slightly. Mix \( \frac{1}{2} \) cup of milk with 2 egg yolks, add the cooled mixture and cook in a double boiler until the eggs thicken, stirring constantly. Chill thoroughly and thin with cream, or a stiffly beaten egg white may be folded in just before it is served.

This dressing may be made with water in place of milk and will keep indefinitely, cream or milk being added to thin a portion at a time as it is used.

**Russian Dressing**
To mayonnaise or cooked salad dressing add 2 tablespoons of **DEL MONTE TOMATO CATSUP** and 2 tablespoons of finely chopped **DEL MONTE CANNED RED PIMENTOS**.
DEL MONTE Canned Apricots

The apricot is said to have originated in Armenia. Today it is grown to a greater extent in California than anywhere else in the world, but even here only certain favored districts produce apricots of the high quality packed under the DEL MONTE Brand. DEL MONTE Apricots are the choicest fruit of California's finest orchards brought to you with all their exquisite tree-ripened flavor. Packed in three sizes of tins, No. 1 tall, No. 2 and No. 2½. Size of can referred to in the following recipes is the No. 2½.

We are the original packers of loganberries, which have come to be so highly appreciated by discriminating buyers. DEL MONTE Berries are sold in No. 1 tall and No. 2 cans. The No. 2 size is referred to in the recipes which follow.

DEL MONTE Canned Cherries

Locations for growing cherries must be selected with great care, as the fruit is easily affected by climatic conditions. The superior flavor of DEL MONTE Cherries is due to the care exercised in their growth and preparation. There are two varieties of DEL MONTE Cherries—Royal Anne and Black Tartarian, the first being the most popular because of its characteristic flavor and small pit. All our cherries are packed unpitted, as the retention of the pit gives that distinctive flavor which everybody likes. DEL MONTE Canned String Beans

The fresh flavor and tenderness of string beans can only be retained by packing them immediately after picking. A few hours' standing makes them tough and stringy. DEL MONTE Canned String Beans are always tender, crisp and full flavored because they are packed fresh from the garden in kitchens located right where they are grown. Fresh beans bought on the open market seldom equal DEL MONTE Canned String Beans in delicacy because they usually have to be picked too long in advance of their use. DEL MONTE String Beans are packed cut, ready to use when heated, in No. 2 cans only.
