A large group of women have already tested these new recipes — and everyone says they’re simply marvelous!

**JELL-O FRUIT ICES**

1 to 2 tablespoons lemon juice

Combine sugar and 1 cup water and boil 2 minutes. Remove from fire and dissolve Jell-O in hot syrup. Add 2 cups water and fruit juices. Turn into freezing tray of automatic refrigerator, setting control for coldest freezing temperature. When partially frozen, turn into cold bowl and beat with rotary egg beater until blended and fluffy. **Jell-O Pineapple Ice**

Use 1 package Strawberry Jell-O, 1 cup canned pineapple juice, and 1 tablespoon lemon juice in this recipe.

**JELL-O MILK ICES**

Substitute 2 cups milk for 2 cups water in the preceding recipe for Jell-O Fruit Ices. Combine sugar and 1 cup water and boil 2 minutes. Remove from fire and dissolve Jell-O in hot syrup. Add fruit juices. Turn into freezing tray of automatic refrigerator, setting control for the coldest freezing temperature. When partially frozen, turn into cold bowl and beat with rotary egg beater until fluffy and thick. Add 2 cups milk and beat until blended. Return to tray and continue freezing, stirring every 30 minutes until mixture holds its shape; then freeze until firm. Freezing time: 5 to 6 hours. Makes about 1 1/2 quarts ice.
To Measure: Use standard measuring cup. Allow 1 pint (2 cups) liquid to 1 package of Jell-O. Fruit juice may be used for all or part of liquid. (Raw pineapple cannot be used successfully. Use cooked or canned pineapple.) One package contains 8 level tablespoons of Jell-O.

To Dissolve: Jell-O dissolves in hot liquid—120° F. The liquid does not need to be boiling in order to dissolve the Jell-O completely. Pour exact amount of hot liquid on Jell-O and stir until all Jell-O is completely dissolved.

To Mold: A metal mold chills more quickly than one of enamel or earthenware. Turn Jell-O into mold and chill in mold until firm. (The tiny bubbles which appear on the surface of dissolved Jell-O are due to the air in the water. They soon disappear, leaving your Jell-O brilliantly clear and sparkling.)

To Chill: Jell-O can be placed in the refrigerator for chilling as soon as it is dissolved. For very quick chilling, place the mold in pan of cracked ice and salt, ice water, or snow. Jell-O dishes may be chilled successfully in about 1 hour if placed in freezing trays of automatic refrigerator. Chill; do not freeze.

To Make Jell-O Whips: Chill dissolved Jell-O until cold and syrupy. Place in a bowl of cracked ice; whip with rotary egg beater until fluffy and thick like whipped cream.

To Make Jell-O Creams: Jell-O creams have a beautiful lustre and require much less cream than most desserts of this type. Use either of the following methods:

For Smooth, Satiny Creams: Chill dissolved Jell-O until cold and syrupy; whip cream until thick and shiny but not stiff and dull. Combine and mold.

For Fluffy, Spongy Creams (with larger volume): Whip Jell-O as well as cream before combining. (See directions above for making Jell-O Whips.) Fold the whipped cream carefully into the whipped Jell-O and mold.

HERE ARE SOME JELL-O POINTERS I PICKED UP IN THE GENERAL FOODS KITCHEN!

To Mold Fruits and Vegetables: Chill dissolved Jell-O until slightly thickened; then fold in fruits or vegetables. They will remain evenly suspended. In general, 1 pint (2 cups) prepared fruits or vegetables are used with 1 pint of Jell-O mixture.
To Make Jell-O Pastries: For tart shells, cut pastry with 5-inch floured cooky cutter. Fit on outside of upturned tart or muffin pans. Trim edges, prick with fork, and bake in hot oven (450° F.) 10 to 15 minutes. For pie shell, line 9-inch pie plate with pastry, prick with fork, and bake in hot oven (450° F.) 15 minutes, or until delicately browned.

To Layer and Decorate Molds: Chill each layer of Jell-O until firm before adding dissolved Jell-O mixture for next layer. Arrange design on layer of clear Jell-O. Cover with enough cold liquid Jell-O to anchor design. Chill until firm. Add remaining Jell-O, pouring carefully in a fine stream against a tablespoon to avoid disarranging design.

To Unmold Jell-O: Dip the mold to the rim in warm—not hot—water. Hold a moment, remove, and dry outside of mold with clean towel. Cover mold with serving plate and invert both plate and mold. Then raise one side of mold slightly so as to allow air to get under Jell-O. Give mold a sharp shake. Lift off mold. Repeat, if necessary.
