There's magic in a package of Jell-O Whip 'n Chill Deluxe Dessert Mix. And with this collection of recipes we will show you how you can become a magician in your own kitchen.

You will learn that Whip 'n Chill is synonymous with versatility because its light creamy texture can be chilled plainly in dessert dishes, sherbet glasses, or pie shells. It can be layered in parfait glasses with fruit, nuts, or whipped cream. It can be frozen in fancy shapes or simply in a freezer tray. It can be turned into a frosting or filling to make a plain layer cake or angel food cake an extravagant delight.

The flavor of Whip 'n Chill can be enhanced when you add a sprinkling of spice, the texture changed with a handful of chopped candy or nuts, the smoothness enriched with sour cream or cream cheese.

For special occasions Whip 'n Chill transforms itself into feathery light soufflés, ladyfinger-lined charlottes, or elaborate frozen bombs to please particular gourmets.

It's all here plus much more, but we don't want to let all the rabbits out of the hat at once. You can do a little of that each time you try a new recipe. Begin now, turn the page, open a package of Whip 'n Chill, and suddenly you'll find a whole new world of magical desserts.
HELPFUL HINTS

For greatest volume, always prepare dessert mix in a small, deep, narrow bowl so that the beaters will go into the mixture as far as possible.

Always use cold liquid when preparing dessert mix. Use milk directly from the refrigerator. And the water or other liquids such as fruit syrups or juice should be cold, too (65° or colder). Do not use fresh or frozen pineapple juice.

If your kitchen is warm or during summer months, chill bowls and beaters before preparing dessert mix.

To avoid spattering, increase speed of electric mixer gradually.

Before adding most chopped fruits or nuts or to get full rounded top, it may be necessary to chill prepared dessert until mixture mounds—about 10 minutes.

To make dessert even lighter, use all water in preparation, following directions on package.

When preparing recipes using 2 packages dessert mix, unless otherwise specified, prepare both packages of dessert mix together in same bowl. Reduce second whipping speed to medium to prevent mixture from overflowing.

To prepare dessert mix with rotary beater, add all the liquid at once to package contents. Mix slowly until completely blended. Then whip rapidly until thick and fluffy—about 3 to 5 minutes.

To unmold desserts, run tip of knife around edge of mold, dip mold in warm water, place serving plate on top of mold, and invert mold and plate; then gently remove mold.
