MEASUREMENTS

1. All measurements are level for all ingredients given.
2. All flour is OCCIDENT FAMILY FLOUR (general purpose) unless otherwise specified.
3. IMPORTANT: All flour measurements are for flour sifted once before measuring.
4. Consult directions on baking powder cans before making changes in amounts of baking powder in recipes. Average amounts for general use are given in these recipes.
5. To measure dry ingredients, such as sugar and flour, use a spoon or scoop to lightly pile the dry ingredients into the cup. Do not dip cup into flour or sugar, or shake the cup when filling it.

TO MEASURE SHORTENING: Fill a measuring cup with cold water to a level that will total one cup full when the amount of shortening called for in a recipe has been added. For example: If ½ cup of shortening is required for the recipe, fill the measuring cup ½ full of cold water. Add solid shortening to fill to the 1 cup measure. Drain off the water and remove shortening to mixing bowl.

All shortening used in these recipes is solid unless melted shortening is called for; when using melted shortening, melt it before measuring.

Shortening may be any type of animal or vegetable shortening. It must be fresh, clear, solid and good flavored.

TO MEASURE SUGAR:
Pack brown sugar into the measuring cup—pressing it sufficiently so that all air spaces are filled. When turning the sugar out it should just hold the shape of the cup.

If granulated or powdered sugar is lumpy, sift it once before measuring.

TO MEASURE HONEY, MOLASSES OR SIRUP:
Rinse the measuring cup or spoon with water before measuring.
HELPFUL BAKING INFORMATION

SUBSTITUTIONS

1 cup milk = ¼ cup dried milk in 1 cup water.

1 cup milk = ½ cup condensed or evaporated milk with ½ cup water.

1 cup sour milk = 1 tablespoon vinegar in sweet milk to make one cup.

To make baking powder use:

1 part soda
2 parts cream of tartar
1 part corn starch

1 square (ounce) chocolate = 4 tablespoons cocoa and ½ tablespoon butter.

1 cup sugar = ½ cup sugar plus ½ cup sirup or honey minus 2 tablespoons liquid. In recipes where sirup or honey is substituted for part of the sugar and the liquid cannot be reduced, increase the flour 4 tablespoons per cup of sirup used.

All sirup called for in these recipes is corn sirup unless otherwise stated. Honey and corn sirup may be used interchangeably in recipes.

WHEN USING YEAST

When Making Yeast Bread: Water, milk or potato water (water in which peeled potatoes have been cooked) may be used interchangeably. Bread made with water is the whitest, but dries out most readily; bread made with milk has the greatest amount of food value; bread made with potato water is less white in color, but stays moist longer than bread made with any other liquid.

In recipes where compressed yeast is used, the one cake referred to weighs one-half ounce. Granular yeast may be used interchangeably with compressed yeast, using 1 package to replace 1 cake of compressed yeast. Use dry yeast as directed.

BAKING UTENSILS

A specific pan size is given for each recipe. If you use a pan of a different size or shape, you will of necessity have to change the baking time; and in some instances the oven temperature.

For a larger, shallow pan increase heat, and for a smaller, deeper pan decrease heat.

Black tin and granite baking pans have a tendency to make baked products brown too quickly. Extremely lustrous metal pans give very slow browning.
COMMON BAKING TERMS

**STIRRING** ... is combining ingredients using a circular motion.

**BEATING** ... is blending ingredients and incorporating air by turning the ingredients over and over in a rapid motion.

**CUTTING** ... is blending one ingredient with another by using a series of vertical, downward strokes.

**FOLDING** ... is the adding of ingredients (such as whipped cream or beaten egg whites) to another ingredient or mixture without losing the air previously incorporated into the batter. Blend the lighter ingredient with the heavier ingredients by cutting through the batter with the side of the spoon or blender—lifting a portion each time and turning it over. See page 56 for photo-description.

**KNEADING** ... is mixing a dough with the hands when it has become too stiff to work with a spoon. Fold the outside edge of the dough over on itself and push with the heels of the palms of the hands. Repeat in a continuous motion. See page 14 for photo-description.

**CREAMING** ... is rubbing fat or fat and sugar against the bottom or sides of the bowl until it becomes a soft, creamy consistency. See page 61 for photo-description.

HIGH ALTITUDE BAKING

Recipes given herein are for use at sea level and up to 3,000 feet. Higher altitudes affect baking, making it necessary to alter the amounts of ingredients used.

When making cakes at an altitude of 3,000 to 6,000 feet, reduce the sugar in cake recipes 1⅛ tablespoons for each cup specified, and the baking powder 1/6 teaspoon for each teaspoon specified.

It is not necessary to alter the amounts of ingredients for yeast products until the altitude is 6,000 feet or over.

For additional information on High Altitude Baking, applicable to your locality, consult your own State University Extension Service.
CARE OF BREAD

COOLING AND STORING

Remove bread immediately from pans and place on a cooling rack so that air may circulate around each loaf. Allow bread to cool without covering. To prevent the crust from cracking, avoid placing hot loaves in a draft. Cool bread to room temperature before storing.

When cool, bread may be wrapped in waxed paper if desired, and placed in a fresh, clean, ventilated bread box. The bread box should be thoroughly washed and scalded once a week during the winter months and oftener during warm weather.

MOLD AND "ROPE"

Bread is sometimes affected by mold, or a growth known as "Rope." Both are more apt to occur under warm, humid conditions. These growths may be controlled and to a large extent prevented by proper cooling of bread and proper care and cleanliness of the bread box.

Mold may be detected on bread by its foreign color. It is not present in bread leaving the oven but may develop because mold is present in the air.

"Rope" is a growth affecting the inside of a loaf of bread, causing the center to become sticky and dark, and accompanied by a disagreeable odor. It usually does not appear until twenty-four hours after baking. The heat of baking does not destroy "rope." As a precaution, if "rope" has appeared in bread, add vinegar to your next bread dough. Mix 1 tablespoon of vinegar with each cup of liquid used in making bread. The bread flavor is not changed. In addition to adding vinegar, wash all utensils coming in contact with the dough and baked bread in hot soapy water or with a good washing powder. Thoroughly rinse each article in boiling water.

PROCEDURE

MIXING

1. Crumble the yeast into 1/4 cup of lukewarm water—and let it soften for 5 minutes.

2. Scald the milk. To scald milk, bring it slowly to a high temperature, but keep it below the boiling point. When milk is heated directly over the fire, you must watch it and stir it to prevent scorching. Milk boils at a lower temperature than water. After scalding, add sugar, salt and cold water. Stir thoroughly until salt and sugar are dissolved. Pour into a large mixing bowl. Allow milk to cool until lukewarm.

3. Pour softened yeast into the lukewarm milk mixture. Stir until well mixed—no chunks of yeast should remain separate after stirring.

4. Add half of the sifted flour to the milk mixture. Stir the dough until flour and liquids are thoroughly mixed into a batter. Note: Adding half of the flour at this time prevents streaks in the bread and helps to make a moist loaf which will keep fresh longer.

5. Melt the shortening. Allow to cool and add to the batter and stir thoroughly.

6. Finally add the remaining sifted flour and mix well. Stir flour into batter until batter takes up the flour.
7. Sprinkle the bread board very lightly with flour and spread the flour around on the board. Turn the dough onto the floured bread board and let it stand there for 10 minutes before trying to knead it. The purpose of this is to let the dough “tighten”—that is, to become firmer and less sticky. This rest period makes the dough easier to knead. (See Photo 7.)

8. Now knead the dough for 12 minutes. (If interrupted, count time out.) Time the kneading with a clock so that the dough is kneaded for a full 12 minutes. (See Photo 8.)

**WHAT IS KNEADING?**

**A.** Kneading is folding the dough over on itself, pushing it lightly with a rocking motion, folding it over, pushing it and repeating this process in continuous motion until the outside of the dough feels satiny and looks smooth. (See Photo 8a.)

**HOW TO KNEAD**

**B.** Fold the outside edge of the dough over on itself toward you and push the dough with the heels of the palms of the hands. After every push, turn the dough one-fourth of the way around and fold it over toward you. Then press the dough with the heel of the hand. Repeat in rhythm. The heel of the palm of the hand is the fleshy portion of the palm. (See illustration 8b.)

**TO KEEP DOUGH FROM FLATTENING TOO MUCH DURING KNEADING**

**C.** Curve the fingers over the outside of the dough. Keep fingers curved each time you press the dough. When dough is kneaded sufficiently, it should not stick to board or hands. (See Photo 8c.)
9. Now round the dough into a smooth ball—and place it in a large bowl. Use a bowl that will not be more than half filled when dough is placed in it. Grease this bowl lightly before placing the dough in it. Also, if the bowl is cold or even cool, warm it. (See Photo 9.)

10. Roll the ball of dough around in the greased bowl to cover the entire surface lightly with grease. Do not grease the dough heavily as this may streak the dough.

11. Cover the bowl with a towel or a lid—and place it in a warm spot (82 to 86 degrees Fahrenheit) away from drafts. If the room is chilly, the bowl may be set into a pan of warm (not hot) water while bread rises. (See Photo 11.)

**RISING**

12. Allow dough to rise for approximately 2½ hours—until it is double in bulk. Do not skimp the rising time. Allow the full 2½ hours unless the room is much warmer than 86 degrees. Be sure dough is fully doubled in bulk. (See Photo 12.)

**HOW CAN YOU TELL WHEN THE DOUGH IS LIGHT ENOUGH?**

12A. You will see blisters or gas bubbles begin to appear on top of the dough. Press your finger deeply into the dough. If the impression remains, the dough is light. (See Photo 12a.)
13. Punch dough down. Plunge your fist into the center of the dough. Fold the edges of the dough over from the four sides to the center and punch again. Punching the dough down breaks up the large gas pockets which make "holes" in the bread. Turn dough over in the bowl so that the smooth side is up. Cover the bowl with a towel. (See photo 13.)

14. Let dough rise a second time, until it is double in bulk. At a temperature of 82° F. this requires approximately one hour.

15. Punch the dough down again. Plunge your fist into the dough several times to let the gas escape. Fold dough over from the four sides to the center until it is its original size.

**SHAPING LOAVES**

16. Sprinkle bread board lightly with flour and turn the dough onto the floured board. Cut the dough into equal portions—depending upon whether the 2, 4 or 6 loaf recipe is used. (See Photo 16.)

17. Round each portion into a ball. Roll each portion gently between the hands. This is done to seal the open pores left after the dough is cut. Cover the dough with a towel and let stand for 10 minutes. This "rest" period makes the dough easier to handle. (See Photo 17.)
18A. Now flatten one of the balls of dough with the palms of the hands until it is oblong. Do not punch or pound dough—merely flatten it.

18B. Fold the edge of the long side to the center and seal.

18C. Then bring other edge of long side to center and seal.

18D. Flatten dough again and pull slightly to make it twice the length of the baking pan.

18E. Overlap the ends of the dough bringing them to the center, then seal with the palms of the hands.

18F. Finally roll the dough with your hands like a jelly roll to finish sealing the edges. This helps to "round" the loaf and make it uniform in size.
19. Place each loaf in a 9"x5"x3" greased bread pan. The "seam" of the loaf should be on the under side. Stretch the ends of the loaf out into the corners of the pan. Cover with a cloth. (See Photo 19.)

20. Let the loaves rise in a warm place until they are fully double in bulk, approximately one hour. Let rise longer if necessary. (See Photo 20.)

**BAKING**

21. Bake the bread approximately 50 minutes at 400° F. In order to permit the heat to circulate freely, do not place pans too near each other. The first quick rising in the oven is called "oven spring." This takes place during the first 10 minutes of baking. If oven temperature is right, the bread does not brown during this time. The bread is done when the loaves shrink from the pan and sound hollow when top crust is tapped with finger.

22. When baked remove loaves from pans immediately and place on cooling racks. Do not cover while cooling—this makes bread soggy. Also, do not cool in a draft as this cracks the crust. If a soft crust is desired, brush the top with melted fat. Be sure bread is completely cold before storing. (See Photo 22.)

**The Sponge Method of Making White Bread (Overnight)**

The sponge method of making bread is generally used when dry yeast is employed in bread making. However, it may also be used with compressed or granular yeast.

The sponge should be prepared the evening before baking.

1. Use the same ingredients, in the same quantities, as listed in the White Bread Recipe. Either compressed yeast, granular or dry yeast may be used.

2. At night do: Steps 1, 2, 3 and 4. At this stage, when one-half the flour has been stirred in, cover the bowl of dough and set away over night in a warm place of about 70° F.

3. In the morning, start at Step No. 5 and proceed with balance of recipe. Note: Allow dough to rise until double in bulk. The length of time required may vary slightly, due to the difference in method used.

Bread dough may be made into rolls if desired. For shaping and baking rolls, see pages 27 to 30.
RAISIN BREAD
Add ¼ cup of raisins to any bread dough after the first kneading.
Proceed with bread making according to directions.

NUT BREAD
Use the recipe for white bread. Add 1 additional tablespoon of sugar and ¼ cup of chopped nuts for each loaf of nut bread to be made. Add the nuts to the dough at the end of the first kneading.

WHOLE WHEAT BREAD
Time: 50 Minutes. Temp.: 425° for 10 minutes, 375° remaining time.

2. Combine the milk and water mixtures, add the whole wheat flour and beat well.
3. Add the melted shortening. When mixed in, add the white flour gradually to make a dough stiff enough to handle when placed on board.
4. Lightly flour a bread board, turn the dough out on it and knead well. Place dough in greased bowl, oil the top, and cover. Set it in a warm place away from drafts. Let rise until double in bulk.

SALT RISING BREAD

3 cups Occident Family Flour
1 cup milk
2 tablespoons white corn meal
1 teaspoon salt
1 tablespoon sugar
1 tablespoon shortening

1. Scald the milk, and cool to lukewarm. Add sugar, shortening, salt and corn meal.
2. Place in a fruit jar or heavy crock and set in water 120°. Let stand for 6 or 7 hours until fermentation can be noted.
3. Add 1 ½ cups of flour to make a sponge. Beat vigorously. Set sponge away in water at 120° until very light.
4. Add remaining flour to make a dough stiff enough to knead.
5. Knead for 10 minutes, place immediately into oiled baking pan. Allow to rise at least twice its original bulk. Bake. This bread is never as light as a yeast bread.

OATMEAL BREAD
Quantity: 3 loaves. Time: 50 Minutes. Temp.: 425° for 10 minutes, 375° for remaining time.

7 cups Occident Family Flour
3½ cups oatmeal

¾ cup lukewarm water
2 teaspoons salt
3 tablespoons melted shortening
3 tablespoons brown sugar

1. Steam oatmeal in the salted water until cooked. Cool.
2. Crumble yeast in ¾ cup lukewarm water and let stand 10 minutes.
3. To the lukewarm oatmeal add the dissolved yeast, salt, sugar, and melted shortening.
4. Add flour to make a stiff dough. Then turn out on a floured board and knead until elastic.
5. Place in an oiled bowl, cover, set in a warm place, and let rise until double in bulk.
6. Punch dough down, let rise again.
7. Shape into loaves, cover and let rise until double in bulk, then bake.
RYE BREAD

Quantity: 2 loaves. Time: 50 Minutes. Temp.: 425° for 10 minutes, 375° for remaining time.

3 cups Occident Family Flour
3 cups Rye Flour
1 cup milk
1 cup water
1/4 cup brown sugar or molasses
1 yeast cake in 2 tablespoons water
1 tablespoon salt
2 tablespoons shortening

1. Crumble yeast in the 2 tablespoons lukewarm water. Let stand 10 minutes. Scald milk, add salt, sugar or molasses, and water. Let cool to lukewarm.
2. Add the yeast, and rye flour. Beat well, add the melted shortening. Add the white flour gradually to make a stiff dough.
3. Turn onto a floured board and knead well. Place dough in slightly greased bowl, cover and let rise in a warm place.
4. When dough is double in bulk, punch down folding the outside edges to the center. Cover and let rise again until light.
5. Knead, divide dough into two equal portions and shape into balls. Let rest for 10 minutes. Shape the two balls of dough into loaves, place in oiled loaf pans, cover, and set away to rise until light. Bake.

ANADAMA BREAD

1. Bring 2 cups of water to the boiling point. Add salt and corn meal. Cook 5 minutes.
2. Add molasses and shortening. Cool to lukewarm.
3. Soak yeast in 1/2 cup lukewarm water for 10 minutes. Add to the lukewarm corn meal mixture.
4. Add the flour gradually, beating well. When all flour has been added, turn dough out on a floured board and knead for 10 minutes.
5. Place dough in an oiled bowl. Cover. Set in a warm place to rise until doubled in bulk.

PROCEDURE

1. Scald the milk. To scald milk, bring it slowly to a high temperature, but keep it below the boiling point.

2. Melt shortening, and set aside to cool sufficiently so that it will not be hot when ready to add to the dough.

3. Measure salt and sugar. Place in large mixing bowl.

4. Pour the scalded milk into the bowl and stir to dissolve sugar and salt. Cool until lukewarm.

5. Crumble yeast into a small bowl. Add 1/2 cup of lukewarm water. Test water on wrist to be sure that it is lukewarm. Lukewarm water is used because yeast will not “grow” well in cold water. Water which is too hot will kill the yeast. Let the yeast soften for 5 minutes.

6. Sift flour once before measuring. Now measure exactly the sifted flour which is to be used later in the recipe. Pile flour lightly into measuring cup—filling to the one cup mark. Use a spoon to dip the flour. Do not dip cup into flour or shake the cup. (See Photo 6.)

7. Add the softened yeast and the remaining lukewarm water to the lukewarm milk mixture. Mix well.
8. Add half of the sifted flour to the milk mixture and beat one minute. (See Photo 8.)

9. Add the unbeaten eggs and blend thoroughly. (See Photo 9.)

10. Measure the melted and cooled shortening and add to the dough. Beat one minute.

11. Gradually add the remaining sifted flour and stir until all the flour is worked into the dough.

12. Sprinkle the bread board lightly with flour. Turn the dough onto the floured bread board and let it stand for ten minutes. This rest period makes the dough more elastic and easier to knead.

13. Lightly grease the large mixing bowl. The bowl should be sufficiently large so that it will not be more than half full when dough is placed in it.

14A. Now knead the dough for ten minutes until smooth and satiny. (See Photo 14a.)

**WHAT IS KNEADING?**

B. Kneading is folding the dough over on itself, pushing it with a rocking motion, folding it over, pushing it and repeating this process in continuous action until the dough is satiny and smooth. Kneading thoroughly mixes the ingredients and develops elasticity. (See Photo 14b.)
HOW TO KNEAD

C. Fold the outside edge of the dough over on itself toward you and push the dough with the heels of the palms of the hands. The heel of the palm of the hand is the fleshy portion of the palm. (See Photo 14c.)

D. After every push, turn the dough one-fourth of the way around, and fold it over toward you. Then press the dough with the heel of the hand, and repeat in rhythm. (See Photo 14d.)

TEST FOR SUFFICIENT KNEADING

To tell whether dough has been kneaded enough—hold your hand on the dough and count to thirty. If the dough does not stick to your hand, it has been kneaded enough. The surface of the dough should feel satiny and look smooth.

15. Round the dough into a smooth ball and place it in the greased bowl—rolling it around to lightly cover the entire surface with grease. Cover the top of the bowl with a clean damp towel and place in a warm spot away from drafts. If the room is chilly, the bowl may be set over a pan of warm (not hot) water while dough rises. (See Photo 15.)

16. Allow dough to rise until double in bulk. A temperature of 82°F. will require a rising period of approximately 1½ hours. (See Photo 16.)

HOW CAN YOU TELL WHEN THE DOUGH HAS Risen SUFFICIENTLY?

You will see blisters or gas bubbles begin to appear on top of the dough. The dough should be double in bulk at this time. Be sure dough is fully doubled. Press your finger deeply into the dough. If the impression remains, the dough is light.
17. Punch dough down. Plunge your fist into the center of the dough and fold the edges toward the center. (See Photo 17.)

18. Sprinkle bread board with one teaspoon flour. Turn the dough onto the floured board, and cut it into 2 equal portions. Round each portion into a ball by gently rolling between the hands. This is done to seal the open pores left after the dough is cut. (See Photo 18.)

19. Cover the dough with a dry towel and let stand for ten minutes. This “rest” period makes the dough much easier to handle.

*The dough is now ready to be formed into any shape desired. Follow instructions under “Roll Variations” for shaping and baking. (Pages 27-30)*

"There's often a very simple explanation for that intent look on a man's face, and his quickened homeward step. Frequently it's the tempting vision of golden brown hot doughnuts, or tender muffins straight from the oven."

USE THIS HANDY ENVELOPE FOR OTHER QUICK BREAD RECIPES
BAKING POWDER BISCUITS

Quantity: 15 Small Biscuits
Baking Time: 15 Minutes
Oven Temp.: 425°

RECIPE

2 cups Occident Family Flour
4 teaspoons baking powder
¼ cup shortening
½ teaspoon salt
¾ cup milk

PROCEDURE

1. Sift flour once before measuring.

2. Measure flour, salt and baking powder. Place them in the flour sifter.
   To measure flour accurately, see Step 1, Page 60.

3. Sift the measured dry ingredients into a mixing bowl.

4. Measure shortening and place it in the bowl with the dry ingredients.
   To measure shortening easily and accurately, see Page 6.

5. With a dough blender, 2 knives (scissor fashion), or a fork, cut the shortening into the dry ingredients until the mixture looks like coarse meal. (See Photo 5.)

6. Measure the milk.

7. Add the milk to the ingredients in the bowl—using a fork or spoon to mix the ingredients. (See Photo 7.)
   Over-mixing of ingredients or excess handling of the dough will toughen the biscuits, therefore, handle as little as possible.

8. Sprinkle two teaspoonsful of flour on the bread board.

9. Turn the dough out on the floured board.

10. Knead the dough about 30 seconds or enough to make it hold together in a single ball. (See Photo 10.)
11. Pat the dough out into a sheet of $\frac{1}{2}''$ thickness.

12. With floured cookie cutter, cut the dough into rounds. (See Photo 12.)

13. Place each round of dough on the baking sheet.

The rounds of dough may be placed so they touch each other to give a soft biscuit without crusty sides. If space is left between each round of dough the entire outside of the biscuit will be crusty.

14. Place the pan of biscuits in a 425° oven and bake 15 minutes or until a golden brown.

**SHORTCAKE BISCUITS**

Use the Basic Baking Powder Biscuit Dough recipe, except:

Add 1 tablespoon of sugar to the dry ingredients.

Add 6 tablespoons shortening in place of $\frac{1}{4}$ cup.

Add 1 beaten egg to the milk before combining the liquid and dry ingredients.

Dough may be rolled to $\frac{1}{2}''$ or less in thickness, brushed with melted butter and the second round of dough placed on top.

When biscuits are baked this way they may easily be broken apart to allow fruit to be placed between them for shortcake.

This dough may also be baked in a loaf pan and cut into individual servings.

Fresh or cooked fruit may be used for shortcake. Sweeten to taste. Serve with plain or whipped cream.

**CINNAMON ROLLS**

<tr>
<td>$\frac{1}{3}$ cup brown sugar</td>
</tr>
<tr>
<td>2 tablespoons melted shortening</td>
</tr>
<tr>
<td>$\frac{1}{2}$ cup raisins</td>
</tr>
</tbody>
</table>

1. Pat dough out to $\frac{1}{4}''$ thickness, and brush with melted shortening.

2. Sprinkle with cinnamon and brown sugar and add raisins.

3. Roll as for jelly roll. Cut into slices $\frac{3}{4}''$ thick.

4. Place cut side down on oiled baking sheet or in muffin pans and bake.

**CHEESE BISCUITS**

Follow above recipe and procedure as given for Basic Baking Powder Biscuits. Roll or pat dough to $\frac{1}{4}''$ thickness. Cut into rounds with biscuit cutter. Sprinkle 1 teaspoonful of grated cheese on half of the rounds of dough. Place another round of dough over the cheese. Seal the edges, place on oiled baking sheet and bake at 425° until lightly browned.

SHORTENING-TYPE CAKES

Standard Method
BASIC CAKE RECIPE

Quantity: Two 8" layers.  
Time: 30-35 Minutes  
Moderate Oven (350°)

This recipe will make a 9"x11" loaf cake baked 40-45 minutes at 350° or 24 cup cakes baked 18-20 minutes at 375°. For smaller recipe see page 58.

| 2 cups sifted  | OCCIDENT FAMILY FLOUR |
| 1 tablespoon  | Baking Powder |
| 1 teaspoon   | Salt |
| 1/2 cup      | *Shortening |
| 1 1/4 cups   | Sugar |
| 1 teaspoon   | Vanilla |
| 2            | Eggs |
| 1 cup        | Milk |

*Any solid fat that has a desirable flavor may be used—such as butter, lard or vegetable shortening.

STANDARD METHOD

1. Heat oven to 350° so that it will be correct temperature when cake is ready to be baked.

2. Prepare the baking pans by lining the bottoms with waxed paper then coating with melted shortening. (See Photo 2.)

3. Sift the flour once before measuring.

4. Measure exactly 2 cups of the sifted flour and place it in the flour sifter. (To measure 1 cup of flour accurately, pile flour lightly into measuring cup which has 1 cup mark level at rim of cup. Use a scoop or spoon to fill cup heaping full. Level off the top with a spatula or straight edge of a knife. See Photo 4).

5. Measure 1 tablespoon baking powder and 1 teaspoon salt and add to the flour in the sifter. Sift.

6. Measure 1/2 cup shortening by filling measuring cup 1/2 full of cold water. Add pieces of shortening, pushing them under the water until water level reaches 1 cup mark. Drain water from cup and place shortening in the large mixing bowl. (See Photo 6.)
Use Exact Measurements

Be sure that all measurements are accurate. Recipes have been perfected for use with OCCIDENT FAMILY FLOUR.

7. Cream the shortening by mashing it against the sides of the bowl with the back of a wooden spoon until it becomes soft and creamy. (See Photo 7.)

8. Measure the sugar. Add it gradually to the creamed shortening—rubbing the sugar and shortening against the bottom and sides of the bowl with the back of the spoon. Continue in this manner until all sugar is added and the mixture is creamed to a soft, fluffy lightness. Properly creaming the shortening and sugar is important in obtaining a light, fluffy cake.

9. Add the eggs to the creamed mixture. (See Photo 9.)

10. Beat the creamed mixture and eggs vigorously. Tip the bowl to one side, bring the spoon into the mixture and through it, turning the mixture over and over in a rapid motion and scraping the sides of the bowl to keep all ingredients blended. Beat until the mixture is smooth, light and fluffy. (See Photo 10.)

11. Add about ¼ of the sifted dry ingredients to the mixture and stir until batter is smooth. Do not overbeat. Beating at this time will toughen the cake. (See Photo 11.)

12. Measure the liquid. (Place the cup on a flat surface while you fill it.)

13. Add vanilla to milk.

15. Continue adding the flour and milk alternately in these same proportions until all ingredients are blended and batter is smooth.

16. Pour the batter evenly into the pan or pans. (See Photo 16.)

17. Place pans of batter in oven preheated to 350°. Arrange the pans on the rack so that they do not touch each other, or the sides or back of the oven.

18. Bake for 30-35 minutes at 350°. The cake is done when it shrinks slightly from the sides of the pans, springs back when pressed lightly with finger or when inserted cake tester or toothpick comes out clean from center of cake.

19. Remove cake from oven and allow it to stand for two minutes so that it may be removed from the pan more easily.

20. With spatula or knife, loosen the edges and turn cake out on a cooling rack. Allow it to stand until cool. Frost as desired when cake is thoroughly cooled. (See Photo 20.)

**Note:** In recipes having 3 or more eggs, the yolks may be added to the sugar and shortening (Step 9). The whites may be beaten and folded into batter after Step No. 15.

Beat egg whites with rotary beater until they hold their shape in stiff, glossy peaks. At this stage the greatest amount of air possible has been incorporated. (See Photo 21.)

Pile the beaten egg whites lightly on top of the batter. Fold them in by cutting down through entire batter with the spoon. Then lift up a portion of the batter and turn it gently over the whites. Repeat the folding process until all egg whites are blended. Do not beat the batter after the egg whites have been added as air will be lost and the cake will not be as light. (See Photo 22.)

For baking in high altitude areas, see Page 8.

SHORTENING-TYPE CAKES

Quick-Mix Method

BASIC CAKE RECIPE

*Quantity: Two 8" layers.  Time: 30-35 Minutes.  Moderate Oven (350°).

- 2 cups Occident Family Flour
- 1 tablespoon baking powder
- 1 teaspoon salt
- 1 1/4 cups sugar
- 1/2 cup vegetable shortening
- 1 cup milk
- 1 teaspoon vanilla
- 2 eggs

*This recipe will make a 9"x11" loaf cake baked 40-45 minutes at 350° or 24 cup cakes baked 18-20 minutes at 375°. For smaller recipe see page 58.

QUICK-MIX METHOD

(Have shortening, milk and eggs at room temperature.)

1. Heat oven to 350° so that it will be correct temperature when cake is ready to be baked.

2. Prepare pans by lining bottom of pans with waxed paper; then grease. (See Photo 2.)

3. Sift the flour once before measuring.

4. Measure exactly 2 cups of the sifted flour and place it in the flour sifter. (To measure 1 cup of flour accurately, pile flour lightly into measuring cup which has 1 cup mark level at rim of cup. Use a scoop or spoon to fill cup, heaping full. Level off the top with a spatula or straight edge of a knife. (See Photo 4).

Use Exact Measurements

Be sure that all measurements are accurate. These recipes have been perfected for use with OCCIDENT FAMILY FLOUR.
5. Place 2 cups flour, 1 tablespoon baking powder, 1 teaspoon salt and 1 1/4 cups sugar into sifter and sift into mixing bowl. (See Photo 5.)

6. Measure 1/2 cup shortening by filling measuring cup 1/2 full of cold water. Add pieces of shortening, pushing them under the water until water level reaches 1 cup mark. Drain water from cup and place shortening in the large mixing bowl. (See Photo 6.)

7. Add 1 cup milk and 1 teaspoon vanilla to shortening and dry ingredients. (See Photo 7.)

8. Stir mixture until batter is smooth. Scrape ingredients from sides and bottom of bowl to be sure all ingredients are blended. (See Photo 8.) (If an electric mixer is used, mix at slow to medium speed for 1 1/2 minutes.)

9. Add unbeaten eggs.
10. Beat for 2 minutes. (If using an electric mixer, use slow to medium speed.) (See Photo 10.)

11. Pour batter into prepared pans. (See Photo 11.)

12. Bake 30-35 minutes at 350°. This cake is done when it shrinks slightly from sides of pan, springs back when pressed lightly with finger or when inserted cake tester or toothpick comes out clean from center of cake.

13. Remove cake from oven and allow it to stand two minutes.

14. With spatula or knife, loosen the edge of cake. Turn cake out on cooling rack. Allow it to stand until cool. Frost as desired. (See Photo 14.)

SPONGE-TYPE CAKES

SPONGE CAKE

Quantity: 10" tube pan. Time: 60-65 Minutes. Slow Oven (325°).

1 cup sifted Occident Family Flour
1¼ cups sugar
½ teaspoon cream of tartar
½ teaspoon salt
1 tablespoon lemon juice
¼ cup water
1 teaspoon vanilla
6 eggs (about ¼ cup egg whites) (have eggs at room temperature)

1. Place the oven rack so that when baking, the cake will be as nearly in the center of the oven as possible. Heat oven to 325° so that it will be correct temperature when cake is ready to be baked.

2. Sift the flour once before measuring.

3. Measure exactly 1 cup of the sifted flour and place it in the flour sifter. (To measure 1 cup of flour accurately, pile flour lightly into measuring cup which has 1 cup mark level at rim of cup. Use a scoop or spoon to fill cup, heaping full. Level off the top with a spatula or straight edge of a knife. See Photo 3).

4. Separate the egg yolks from the egg whites —putting the whites into a measuring cup and the yolks in a small bowl. Then place the measured egg whites (about ¼ cup) in the large mixing bowl.

5. Add 1 tablespoon lemon juice, 1 teaspoon vanilla and ¼ cup water to egg yolks and beat until light in color and thick. (See Photo 5.)

6. Add ½ teaspoon salt to the egg whites.

7. With a flat wire whisk, beat the egg whites until frothy. Egg whites have reached the frothy stage when the entire mass is foamy and they have taken on a white appearance. (See Photo 7.)
8. Sprinkle ½ teaspoon cream of tartar over the frothy eggs.

9. Continue beating the egg whites using long sweeping strokes and lifting the beater high, until they hold up in stiff, glossy peaks. The air bubbles are now very fine and even. It is absolutely necessary that the egg whites be beaten to this stage to secure the maximum volume and to incorporate the greatest amount of air. (See Photo 9.)

10. Measure 1½ cups sugar. Add about ¼ cup of sugar by sprinkling over the fluffy eggs. Beat in sugar to form a meringue. Continue adding sugar (in ¼ cup portions) until all sugar is added.

11. Add the beaten egg yolks and fold in gently. Cut through the batter with the side of the wire whisk . . . lifting up a portion of the batter and turning it over. Repeat this motion four or five times. (See Photo 11).

12. Add flour (about ¼ cup at a time) by sprinkling over eggs. Fold flour into egg mixture. (See Photo 12.) Use gentle strokes and as few as possible in combining the ingredients. Retaining the air in the egg whites is important to secure a finished cake of the greatest possible volume.

13. Continue adding flour in ¼ cup portions until all flour and egg mixture are evenly blended.

14. Lift and tilt the bowl over the *ungreased tube pan. Allow the batter to drop gently into the pan. Revolve the pan to distribute the batter evenly.

15. Cut through the batter in the pan to remove any large air bubbles. (See Photo 15.)

16. Bake for 60-65 minutes. Cake is done if surface springs back when pressed lightly with finger.

17. Remove cake from oven. Invert pan and let cake hang until it is thoroughly cold, or it will collapse from its own weight. Cooling will require about 1½ to 2 hours.

18. Loosen the cold cake from pan by inserting small spatula vertically around edge of pan and center tube.

*A piece of waxed paper may be fitted into bottom of pan, if desired.

USE THIS HANDY ENVELOPE FOR OTHER COOKY RECIPES
BASIC DOUGH

Quantity: 4 Dozen

Oven Temp.: 375°

Baking Time: 8 Minutes

RECIPE

3 cups Occident Family Flour
1 cup butter or substitute
1 cup sugar
2 tablespoons cream
1 teaspoon vanilla
¼ teaspoon mace
½ teaspoon salt
1 teaspoon baking powder
1 egg

PROCEDURE

1. Sift flour once before measuring.

2. Measure flour, salt, baking powder, and mace. Place in flour sifter.
   To measure flour accurately, see Step 1, Page 60.

3. Measure shortening.
   To measure shortening easily and accurately, see Page 6 or use ½ pound which equals 1 cup.

4. Cream shortening by mashing it against the sides and bottom of bowl until it is a soft mass.

5. Measure sugar. Add it gradually to the creamed shortening — rubbing the sugar and shortening against sides and bottom of bowl with the back of the spoon. Continue in this manner until all sugar is added and mixture is creamed to a soft fluffy lightness.

6. Add egg and beat into the creamed mixture. (See Photo 6.)

7. Measure and add vanilla.

8. Measure and add cream.

9. Add about a third of the sifted dry ingredients and stir to blend. Continue until all is incorporated. (See Photo 9.)

The Cooky Dough is now ready to be formed for baking.
**ROLLED COOKIES**

1. Chill the dough half an hour.
2. Preheat oven to 375°.
3. Place about a third of the dough on a pastry cloth or slightly floured board.
4. With rolling pin (floured or cloth-covered) roll the dough to \( \frac{1}{8} \)" thickness. Roll dough by flattening slightly, then rolling from the center to outside in all directions.
5. Dip cookie cutter into flour and cut into desired size and shape. (See Photo opposite.)
7. Place in oven and bake.

**FORMED COOKIES**

1. Preheat oven to 375°.
2. Shape dough into small balls about the size of a walnut.
3. Place 3" apart on baking sheet.
4. Flatten each ball of dough to \( \frac{1}{8} \)" thickness by pressing with a flat object, such as the bottom of a round glass, dipped in flour. (See Photo opposite.)
5. Place in oven and bake.

**REFRIGERATOR COOKIES**

1. Divide dough into 2 parts.
2. Shape each part into a roll 2\( \frac{1}{2} \)" in diameter.
3. Wrap each roll separately in waxed paper and place in refrigerator over night or until rolls are very firm.
4. Cut the firm rolls of cooky dough into \( \frac{1}{8} \)" slices. (See Photo opposite.)
5. Arrange slices on baking sheet.
6. Place in preheated oven and bake until very delicately browned.

_ALLOW all cookies to become perfectly cold before storing._

For baking time and temperature see instructions under type of pie being made.

PROCEDURE

1. Place sifted flour into the flour sifter; then add salt.

2. Sift the salt and flour onto a bread board. (This pastry is to be made on the board; however, if you prefer, it may be made in a bowl.)

3. Measure shortening by water displacement method (Page 6) and place with the flour on the board. (See Photo 3.)

4. With a spatula or knife cut the shortening into the flour until the pieces are the size of marbles. (See Photo 4.)

5. With a rolling pin roll the flour and shortening together to form flakes. (See Photo 5.)

6. Heap the mass of flakes in a mound and make a depression in the center. Pour the cold water into the depression. (See Photo 6.)
7. With the flat side of the spatula or knife, combine the flakes of flour and shortening with the water by firmly pressing, lifting and folding the ingredients together until they are formed into a mass of dough. With cupped hands, shape the dough into a ball. (See Photo 7.)

8. Divide the dough into halves; and round up each portion.

9. Sprinkle the board with flour and roll one piece of dough. Keep the dough as circular as possible. Use quick light strokes, working from the center to the outside in all directions. Loosen dough from the board with a spatula; lift dough and dust board very lightly with flour. Turn dough over and continue rolling until the circle is large enough to fit the pan. Pastry dough should be one inch larger than the pie pan. (See Photo 9.)

10. Lightly fold the dough in half and lift it into the pan, placing the fold down the center. Do not pull or stretch the dough as this will tend to make the crust shrink while baking. Unfold the dough and gently shape it in the pan. Follow directions below for the type of pie being made.

**PAstry SHELL**

Flute the edges of the dough and trim off the excess. Prick the bottom and sides well, using the tines of a fork. (See Photo above.) This will prevent puffing during baking. Bake at 450° for 12 minutes. Cool thoroughly before filling. A pastry shell may be made by placing the dough over the bottom of an inverted pie pan for baking if desired.

**ONE-CRUST PIE**

Flute the edges of the pastry and trim off the excess dough. (See Photo above.) If desired the bottom of the pastry may be coated with melted fat or brushed with egg white before filling. This helps prevent the filling from soaking into the crust while baking. Pour the filling into the pastry-lined pie pan and bake according to directions for the specific recipe being used.
TWO-CRUST PIE

Trim off excess dough. Roll out the other half of the dough to 1" greater in diameter than the pie pan. Lightly fold the dough in half; cut small diagonal slits on the fold. This will allow steam to escape during baking and prevent the pie from boiling over. Fill the pastry-lined pie pan with the desired filling. Moisten the edge of the bottom crust to aid in sealing the two crusts together. Lay the folded pastry for the top crust over the filling and unfold. Press the top crust onto the moist edges of the lower crust. Flute the edges, trim off excess dough, (see Photo opposite) and bake according to directions given for the kind of pie being made.

HOT WATER PIE CRUST

1 1/2 cups Occident Family Flour
1/2 teaspoon salt
1/2 teaspoon baking powder
1/2 cup shortening
1/4 cup boiling water

1. Sift flour, salt and baking powder together.
2. Pour boiling water over the shortening and beat until creamy. Let stand to cool slightly.
3. Combine with the dry ingredients. Mix lightly and only enough to allow mixture to cling together.
4. Roll and shape, using same method as for plain pastry.

For one-crust pie use half of the above ingredients.

RICH OR PUFF PASTE

Quantity: 1 dozen tarts or 1 two crust pie. Time: 12 Minutes. Temp.: 450°.

2 cups Occident Family Flour
1 cup shortening (part butter)
1/2 teaspoon salt
4 tablespoons cold water

1. Sift flour and salt together, cut 1/2 of the shortening into the flour, leaving pieces about the size of a marble.
2. Roll the pieces of fat into the flour.
3. Add the water and work it in gently, with a spatula. Chill the dough 10 minutes.
4. Place the dough on a floured board and roll to 8" diameter. Place dots of some of the remaining shortening (butter) on the dough. Fold the dough and gently roll again. Repeat this until all of the shortening has been rolled into the dough.
5. Roll dough to 1/8" thickness and cut into desired shapes for tarts; or use as pie crust.

MERINGUE

VARIATIONS FOR CREAM PIE

Banana Cream
Prepare cream filling as for cream pie. Add 2 sliced bananas to the cooled custard before pouring into the baked pastry shell. Cover with meringue and bake, or top with whipped cream.

Butterscotch Cream
Using the recipe for cream pie filling, substitute brown sugar for the white sugar. Also use 4 tablespoons butter rather than the 1 tablespoon as called for in the cream filling recipe. Top with meringue or whipped cream.

Cherry Custard
Add 1 cup of cooked, drained cherries to the cream pie recipe. (If cherries are unsweetened, use ¾ cup of sugar instead of ½ cup sugar as in the standard cream recipe.) Top with meringue and bake 20 minutes at 325°.

Cocoanut Cream
Prepare cream filling as for cream pie. Add ½ cup shredded cocoanut to the filling before pouring into baked pastry shell. Cover with meringue. Sprinkle meringue with ¼ cup cocoanut. Bake 20 minutes at 325°.

Chocolate Cream
Prepare cream filling as for cream pie, adding 2 squares of baking chocolate to the hot milk. Top with whipped cream or meringue.

Pecan Butterscotch
Add ½ cup pecan meats to the Butterscotch Cream recipe. Top with meringue or whipped cream.

Pineapple Cream
Add 1 cup of drained, crushed pineapple to the cooled custard before pouring into the baked pastry shell. Top with meringue and bake at 325° for 20 minutes.
