A two-headed calf made a visit at Michigan State when he died after a few days at the State University of Michigan. The calf was two-headed and had an extra set of lungs. The State University of Michigan has been keeping the calf since it was born. The calf was delivered by Dr. Harry Brown, a veterinarian, at the Michigan State University Hospital.

First of all the most unusual and most extraordinary animal that has been seen at the State University of Michigan, the two-headed calf has been examined by veterinarians and was found to be in perfect health.

"Two-headed animals are rather common," Dr. Brown said. "They are not unusual, but very rare." The calf was delivered by Dr. Brown, who is a veterinarian at the State University of Michigan. The calf was delivered at the State University Hospital and was found to be in perfect health.

"We are extremely interested in the calf," Dr. Brown said. "We are studying it to find out if there is any possibility of it being used for medical research."
