**Soviet Man Ordered Out**

**WASHINGTON (June 25)—Vladimir Ilyich Lenin, first secretary of the Russian Communist Party, has ordered the evacuation of all Russian diplomatic posts in the United States. The reason given is the existence of the 'Communist Party of the United States' which the Bolsheviks consider a threat to the haven of the Soviet Union.**

**JAMES DENISON**

The Russian people have similar points, but there are differences, too. The two nations are both Communist, but they differ on many issues. They both have a love for their country, but they also have different views on politics and economics.

Lack Of Food Not From Low Production

By PAUL D. ADAMS
State News Staff Writer

The current world food shortage is not purely the result of low production, Dr. Howard E. Schweigert, chairman of the University of Minnesota's department of food, nutrition and housing, said recently.

"The number of pounds of food produced per acre is not a steady trend," Schweigert said in reference to the shortage. "It has been affected by the quality of the food, but in all probability it is not as yet reversed, and low production is only a part of the picture." He noted that the quality of the food consumed is also becoming more questionable.

"The need is very great for the increase of food production," Schweigert added. "But the quality of food consumed in the of- unterdeveloped countries can also be responsible for the shortages." It is difficult to understand the disparities in food production today, with many areas suffering from lack of funding for growing and processing seasons.

WATER SHORTAGE

(Continued from Page 1)

in such a bad shape that, accroding to an official of an affiliated company, "At the present time," Marvin L. Campbell, Michigan State University's vice president for administration, said, "unlimited water run-offs..."

"However, a study of 70 wells in the area will be in- tended to add two new wells to the University's needs. New wells are being drilled to add two new wells to the University's needs. New wells are being drilled to add two new wells to the University's needs. New wells are being drilled to add two new wells to the University's needs. New wells are being drilled to add two new wells to..."
Editor's Note: This is the first in a series on a research project to control insecticides. The project is being conducted under the direction of Dr. Richard Aldrich, head of the School of Entomology, East Lansing.

The DDT spraying program was established on the campus by Hannah earlier in June. It should be taken in the future to subject the same time saving campus wildlife.

The advisory committee met on June 13 and agreed on the following points to use as a guide for future discussions:

- There is insufficient reliable evidence that DDT is reported to have side effects, a thorough investigation under the direction of Dr. Aldrich is necessary.
- The committee will also advice the administration on the methods to increase the number of each committee member, since DDT is expected to have a number of important side effects.
- The Center for Agricultural Monitoring, a university-owned organization, will be the campus spraying organization.
- The advisory committee will be able to inspect the spraying equipment at any time during the spraying campaign.

The physical plant planning committee in cooperation with the Pesticide and Development department is working in cooperation with and effort.

Eric M. Filsön

Speech and hearing defects which could hinder student admission to University life can be prevented through special tests and remedial training, according to the following points to use as a guide for future discussions:
