Coed Purse Returns To Campus

A campus fall is deep in fact, is a man with two legs. However, our campus fall is deep in the heart of the Coed Purse Department. They are not just carrying purses, but also carrying the hopes and dreams of their fellow students. The Coed Purse Department has been working throughout the summer to compile a list of all the purses and accessories that are available. The list includes everything from simple crossbody bags to intricate vintage handbags. The department has also been working on the design of a new line of purses, which will be released later this fall.

Kenton Coming Sunday

Yan Kenton arrives Sunday to conduct his third annual workshop here. Kenton is the conductor of the Kansas City Municipal Band, and has been conducting similar clinics throughout the country. His reputation has grown, and he is considered one of the fastest-rising young conductors.

Lucas On Way To Russia

Russia's premier operatic tenor, Lucas, is on his way to Russia. He will be conducting the Moscow State Academic Opera and Ballet Theater. Lucas is known for his beautiful voice and his ability to convey the emotions of a song.
Parking Regulations Consider Old Problem

By ERIC M. FILSON
State News Staff Writer

The problem in relation to student considerations is that of a housing problem for the University.

During the fall of 1962 state legislators were asked to consider an amendment that would have required all state universities to provide accommodations for all students.

The amendment was introduced by Senator John E. Smith (D-Michigan) and was approved by the House but defeated in the Senate.

The amendment was based on the premise that all state universities should provide housing accommodations for all students.

The problem is that the University of Michigan, which has the largest student population in the state, does not provide adequate housing accommodations for all students.

The University of Michigan is one of the leading universities in the country and has a large number of students who come from all over the state.

The University of Michigan has a policy of providing housing accommodations for all students who are majoring in engineering, but it does not provide adequate housing for all students who are majoring in other fields.

The problem is that the University of Michigan does not have enough housing accommodations to meet the needs of all its students.

Michigan State News, East Lansing, Michigan
PARIS—French President De Gaulle has told some of his closest aides that France's presence in Vietnam could be the end of his presidency. He said it "is not a question of what we do..." but rather, "of whether we should remain or leave..."

WASHINGTON—Undersecretary of State Walter Harrison has ordered the Department of State to raise the question of the effect of the foreign exchange controls on the stability of the world economy as an issue of national and international significance. This is in response to the statement of the Secretary of State that the United States should be prepared to work for an "international financial order" in order to avoid any further likelihood of instability.

Monday's foreign exchange controls, according to Mr. Harrison, "are designed to prevent an economic collapse of the United States economy, and to prevent the United States from becoming the scapegoat for the international economic problems that may result from the foreign exchange controls." He added that the controls are intended to "provide the United States with the opportunity to meet its international obligations without becoming a victim of the international economic problems that may result from the foreign exchange controls."

**Toxicology Study In Giltnor Hall**

**Studies Seek To Answer**

**Many Questions On Fish**

"All life appears to have a unique atmosphere, affecting the chemistry of various elements through the body's ability to assimilate oxygen," a scientist from the National Institute of Health in Washington, D.C. said.

Architectural studies have shown that the minute structures in our bodies are a function of the environment in which we live. The study of this relationship is called "toxicology." The field is concerned with the measurement of any substance that is transferred through the body's metabolism.

Dr. J. M. Gdowski, a researcher at the Institute of Toxicology in Giltner Hall, said that his work is aimed at developing a better understanding of how pollutants affect the human body. "We are trying to determine how substances affect different organs," he said.

Dr. Gdowski also mentioned that there are many unknown factors in the field of toxicology. "We are trying to understand how substances affect the brain," he said. "But we are not yet sure how the brain reacts to environmental pollutants."
