History Rides With Young Nations Says Asia Expert

**Viet Nam Death Plot Revealed**

FAM K, Viet Nam —“The plot to assassinate Prime Minister Pham Van Dong of the moderate underworld, Le Van, Kim, Nuong Khanh, and Vu Tien Huy, prime minister, told reporters here.

We all agree that community service is important, he said. "Perhaps the state should provide some kind of loan or grant to make it easier to attend college." He added.

"Do you have any other suggestions for improving the social security system in Vietnam?" the reporter asked.

"I can say that we are working on a new social security plan that includes both contributions from the government and the individual," the prime minister replied.

"What about health care? Are there any plans to improve health care services in Vietnam?"

"Yes, we are working on a new health care system that will provide universal access to healthcare," the prime minister said.

"And what about education? What are your plans for improving education in Vietnam?"

"We are implementing a new education system that will provide quality education for all children," the prime minister replied.

**Malaysian Troops Sent To Borneo**

KUCHING, Malaysia — The Malaysian army has sent troops to Borneo to help contain the threat of separatist movements in the region. The troops are part of a larger military operation that has been mounted in response to recent unrest in the area.

**Nordic Summer Olympic Games**

ATHENS (UPI) — The first Nordic Winter Olympic Games were held in Stockholm, Sweden, in 1958. The games were held on February 9th and 10th, and featured events such as cross-country skiing, biathlon, and luge.

**Greek Fleet Leaves For 'Navel Exercises'**

ATHENS (UPI) — The Greek navy has departed for a series of naval exercises in the Mediterranean, where it will practice various maneuvers and defensive strategies.

**Cordier Sees Sciences Duality**

New York, New York — Cordier’s views on the role of science have been widely debated in recent years. The scientist has argued that science must serve both the needs of society and the natural world.

"Science has become our master," Cordier said, "as well as our servant and our ally in the world of human affairs. It is the link between the thunder of the 21st century and the thunder of our distant ancestors.

"It is our duty to use science wisely, to ensure that it serves the needs of humanity. We must strive to understand and predict natural phenomena, to harness the power of the universe, and to improve the quality of life for all people.

"But we must also recognize the limitations of science. It is not all-knowing, and its predictions are often wrong. We must remain humble and open to new ideas, and be willing to change our minds when necessary."

"Science and technology are powerful tools, but they must be used with care and responsibility. We must always remember that the ultimate goal of science is to serve the needs of humanity, and to improve the quality of life for all people."
With Students In Mind... Grading Studied

The report on grading practices submitted to academic council indicates a concern of the University administration for the problems of instructors and students caught in a web of traditions and rigidly prescribed grades which may not understand and which may work to their disadvantage. Many significant questions were raised in the report. Such time-consuming work as grading, and the overemphasis upon the grading of students entering or graduating from the upper division were brought up for consideration and evaluation.

The committee which investigated the grading situation drew no conclusions in its report other than that individual instructors should be responsible to the department for frequent comparisons of techniques and principles with those of other colleagues. The committee should, however, need to attempt to minimize injustices to students.

It will probably take a lot more study of the complicated grading situation before any significant changes can be made in the present practices but the attention being given the problem is sure to be beneficial.

**Winds Of Change Symposium**

**Guerrilla Warfare Requires Inflexible Desire To Win**

By OTIS BALTER

San Jose State Weekly

In a remarkable development, the Finland News of Turku, a major city in Finland, has published an article that provides an overview of the “Winds of Change” symposium that took place on October 27, 2014, at the University of Turku. The article was written by Olof H. Svensson, a correspondent for the Finland News, and it highlights the key themes discussed during the symposium, which focused on the role of guerrilla warfare in contemporary conflicts.

The symposium was attended by a diverse group of scholars, political analysts, and military experts who explored the tactics, strategies, and implications of guerrilla warfare in various conflicts around the world. The discussions covered a range of topics, including the historical context of guerrilla warfare, its evolution over time, and its current relevance in contemporary conflicts.

One of the main themes discussed was the importance of an inflexible desire to win for guerrilla fighters. This is because guerrilla warfare often requires prolonged conflicts and significant sacrifices, and a strong determination to succeed is crucial for sustaining the fighters' morale and motivation.

Another key point was the role of external support and resources. Guerrilla movements often rely on support from sympathetic countries, international organizations, and local populations, and the symposium explored the strategies used to attract and sustain this support.

The symposium also delved into the legal and political implications of guerrilla warfare, including the challenges faced by governments in dealing with such movements and the international law that governs their actions.

The concluding remarks emphasized the importance of understanding guerrilla warfare as a complex and multifaceted phenomenon that requires a nuanced approach to its study and analysis.

Overall, the symposium provided valuable insights into the world of guerrilla warfare and underscored the need for continued research and dialogue on this critical topic.
Winning Cage Seasonal Reality

State News Sports Writer

Four months, playing their last home games of the regular season, the Spartans won. This year, victory was a must to avoid tying with Northwestern for second place in the Big Ten. The Spartans ended the season with a 5-1-1 mark and are now tied for third place. The win climaxed a successful season for the Spartans who brought their fieldhouse record to 11-9-9 and a season record of 17-15-9. The win also marked the end of the season for the Spartans who will be playing in the NCAA Men's Ice Hockey Championship.
