South Vietnamese Say ‘Get Tough’ With Reds

LBJ, Viet Heads Plan War Strategy

RONOULU (AP) -- President Johnson was told Monday by the prime minister of South Viet Nam that Saigon will not surrender or compromise in the Common Man’s struggle to increase military strength because, he said, that’s the only language the North understands.

At the first formal meeting of their top strategy council, Johnson and Prime Minister Nguyen Cao Ky outlined these positions -- generally in similar language but with differences of emphasis.

Johnson said he wants to see a two-pronged program in South Viet Nam. "We’re looking for a program in which we can see Saigon and the United States actively working for peace on the one hand, and strengthen Saigon’s military strength on the other, " he said.

The South Vietnamese prime minister thanked that his country would continue to place a premium on peace and military success wherever and whenever.

He pledged his government’s "full support and cooperation in any peace effort.” He declared that the United States government led by President Johnson "will continue to promote the policies guided by the North Vietnamese government."

Veterans May Wait Months For Benefits

Veterans of the War in South Viet Nam may have to wait months for benefits that the Johnson administration has promised for them.

John F. Kennedy was promised that there would be no more than a 30-day lag between the signing of a bill authorizing payments of benefits and the actual payments. The law authorizing the payments was signed by the President on February 7.

There have been no payments, however, because the Department of Veterans Affairs has not yet formulated the regulations that are required to administer the program.

In his statement, the President said that he would try to get the regulations into effect "as soon as possible." He added that "I have every confidence that the Department of Veterans Affairs will carry out its responsibilities in a prompt and efficient manner."
Large Universities Mean More Than ‘Quantity’

RUSSELL KIRK, A COLUMNIST and author of voluminous essays, is known for his critical views on large universities. He recently expressed concern that the size of these institutions is making them less effective. While students may benefit from the broader perspectives and resources available at large universities, Kirk argues that the quality of education is suffering.

Kirk fears that the large size of these universities will limit individual student interaction and engagement. He suggests that the atmosphere of a smaller institution can foster a more dynamic and intellectually stimulating environment.

Many argue that the benefits of a large university outweigh the drawbacks. Large universities offer a wider range of courses, greater opportunities for research, and a more diverse student body. Additionally, the sheer size of these institutions allows them to attract and support some of the most renowned professors and researchers.

However, Kirk believes that the cost of these benefits is too high. He worries that the large size of these schools is making them less focused on individual student needs and学术 quality.

In his article, Kirk suggests that universities should not only consider the size of their institution but also the quality of their education. He argues that smaller institutions can provide a more personalized and high-quality educational experience.

</table>

Kirk’s concerns are echoed by many who believe that the quality of education is more important than the size of the institution. It remains to be seen whether larger universities can maintain their academic integrity while accommodating the needs of a vast student body.

Nasty Indian Food Riots

To the Editor

I am writing in opposition to the criticism in Monday’s paper of the international Journal Press last Friday. It is not a criticism of the performance of all of the facilities that the performer has no control over.

But our local dump truck, the Micronauts, didn’t work properly and the audience wasn’t good. The audience seemed to be enjoying themselves too much and the performer was doing his best to make them laugh. However, despite their efforts, the performance was not as successful as expected.

Let’s Bring Back Culture, Band Shell

By Tony Ferrante

Our community is in need of a cultural center to bring people together and celebrate our heritage. A band shell would be an excellent addition to our public spaces. It would provide a place for concerts, festivals, and other cultural events, helping to promote a sense of community and make our public spaces more enjoyable.

However, I understand that there may be concerns about the cost and maintenance of a band shell. It is important to consider these factors when making decisions about public infrastructure. But I believe that the benefits of a band shell far outweigh these concerns.

Let’s work together to bring back culture and create a Band Shell for our community.

Peace At Gunpoint

To the Editor

Despite the recent violence in the area, it is important to remember that peace is attainable. I believe that political scientists can play a role in promoting peace through their research and teaching.

In my opinion, the key to achieving peace is education. Politicians and political leaders must be educated on the importance of peaceful resolutions. They must understand the benefits of using peaceful means to resolve conflicts.

I encourage political scientists to engage with policymakers and promote the value of peaceful resolutions. Together, we can work towards a more peaceful future for all.

Bomb Recovery Security Impose
PALOMARES, Spain (UPI)—U.S. and Spanish au-
thorities today imposed strict security precautions
around a beachhead where 11 missing U.S. military
personnel, including 2 of the 12 missing U.S. aircrew,
were found. NATO officials said the recovery of the
11 men took about 1,200 feet of water off the south-
est coast of Spain.

The increased security measures appeared to be
prudent in the arrival of the "203," a U.S. military
miniature twin-engine submarine with a mechanical
tail that was supposed to join the NATO units.

Narcotics Blamed In Girl's Death

**CO-SUPPORTED BY AEC**

**Plant Study Center To Open Soon**

One of the buildings being constructed on the campus will house a unique $1 million plant research project supported by AEC and the U.S. Atomic Energy Commission. This University-sponsored project is known as the Plant Science Laboratory. As such, it is designed to further the understanding of plant life and its relationship to the scientific community.
**Cooley: Left-Handed Goalie Rights Himself**

By JOE MITCHEL

Staff News Writer

Senior fencer Gene Cooley is a left-handed expert who recently was making the right moves in the right direction.

Though the "seven-handed" nemesis to the attacking right-hander, Cooley has shown the ability to read, react and respond to the moves of his opponents. And he has made it to the pros, although not quite in the way he originally visualized.

Cooley's location, Ontario, was already made it to the NFL's Buffalo Bills, but his performance in a college program has made the future a top draw in the upcoming years.

When asked about his training for the upcoming season, the 1966 Ontario University's Champion explained, "I'm working on my skills and getting ready for the next season." Cooley's training includes long hours of practice, which he believes will prepare him for the professional level.

**Trackmen Open At Home In MSU Relays Saturday**

By PHIL PIERSON

State News Writer

Junior fencer John Cooley will be one of the leading stars for the relay team at the Michigan State University (MSU) Relays this week.

The MSU relay team will be composed of John Cooley and Gene Behm, who both have placed in the top ten in the men's relay events.

The relay team will have their first opportunity to compete in the MSU Relays on Saturday, where they will face the best relay teams in the nation.

When asked about his expectations for the relay team, Cooley said, "I think we have a good chance of winning. We have a lot of experience, and our team is working hard to improve our performance."
FHA Mortgage

Information Rate Hikes

WASHINGTON, D.C. — Higher mortgage interest rates go with
higher rates on other money-making ventures. The Federal
Home Loan Bank Board, which regulates the rates, announced
higher mortgage interest rates. The increases will add $3.5
per month to the monthly payments on FHA mortgages, raising
the payments.

Some builders and other industry leaders doubt that the increases
will be enough to offset the higher interest rates. The FHA-mortgage
market, which has been up and down, shows high interest rates
being sought as much as 8.5 per cent.

FHA rates in recent years have been from the Federal Housing
Agency in 1950 of 5.75 per cent.

The new standards were set by the Federal
Reserve Board, which decided to increase the discount rate from
6 per cent to 6.25 per cent.

One of the changes in the mortgage rules is the
increase in the amount of money that can be
borrowed on a home. The maximum mortgage
amount has been increased from $75,000 to
$100,000.

The FHA Home Loan Board was
appointed by the Federal
Reserve Board, which has
the authority to set the
mortgage rates.

HUNGARIAN BALLET FEATURES

Warrior And Gypsy Dances

The Hungarian National Ballet was
on stage at the Capitol Theater, offering a
variety of dances from Hungary. The group
was directed by Béla Kun, who helped
create the original works.

The evening began with a
program of solo and duet dances,
highlighted by the famous
Hungarian dance, the "Csárdás." The
performance included a
repertoire of Hungarian
folk dances, "Csárdás," "Folkloric," and
"Rakoczi March."

The dancers of the Hungarian
National Ballet were
under the direction of its
master dancer, László
Kun. The group's
repertoire included a
broad range of Hungarian
folk dances, including
"Csárdás," "Folkloric," and
"Rakoczi March.

OLIN REPORT

Admiral Olin Report

The United States Navy announced
plans for the construction of a new cruiser,
the USS "Reagan." The cruiser will be
powered by two nuclear reactors and will
be armed with missiles.

The USS "Reagan" will be the first
nuclear-powered cruiser in the U.S. Navy,
and it is expected to be ready for service
in 1968.

The cruiser will be 984 feet long
and will have a displacement of 50,000 tons.
It will have a top speed of 35 knots and
can carry 12 aircraft.

The cruiser will be armed with
four Sea Sparrow missiles, four Surface
To-Air Missiles (SAMs), and eight
Tomahawk missiles.

The cruiser will be capable of
interdicting enemy ships and aircraft in
the western Pacific Ocean.

The USS "Reagan" will be built
at the Kaiser Shipyard in Seattle, Washington.
