Research team to sample blood for PBB traces

By NANCY LARIEU
State News & Staff Writer
Four members of the research team from the Environmental Sciences Laboratory at MSU State Hospital will return to Michigan Monday to take blood samples from patients.

Dr. Henry Anderson, a member of the New York research team, said he and three other team members will go to various farms to draw blood from patients, and analysis of the patients will be conducted at the laboratory.

"We want to characterize the situation better," Anderson said Thursday. "In order to run numbers and plots of the patients, however, the blood samples drawn must be preserved for the purpose.

The test next week is a follow-up of the research team's previous examination of 300 siblings of a New York patient who was the source of the study last year.

Anderson said the team serving next week will travel from blood research centers in 30 states, including the group, hopefully obtaining blood from both low and high levels of contamination.

Two of the group members will return to New York Monday evening with the other two, because they must be examined in New York immediately. A third team member will return with additional samples Wednesday.

Anderson said the trip will be made by car if the weather was not favorable. He said the team had planned to take samples as a precaution but time ran short.

PBB, once fears eliminated, was the worst health threat of the 1970s; now there is no public health threat posed by the substance.

Gino, William G. Milliken and two staff members who hope to create a new government agency to deal with PBB contamination issues in the state.

"I read in the paper that the governor wanted the petitions, so I went there then," Milliken said.

Adney said he really knew what he was doing when he presented the petition for the governor's signature, but he also knew that he would have to bring the petition to the legislature for approval.

The governor's signature was the last step in the process of creating the new agency. Milliken, the governor's director of planning and research, said the governor's signature was the last and the most important step in the process of creating the new agency.

**Chinese premier named paper reports**

HONG KONG, Dec. 27 (AP) — A Hong Kong newspaper reported Thursday that Premier Zhou Enlai had named new leaders at the top of China's government, and that a member of the new leadership had been named premier of the People's Republic of China.

The report said that the new premier had been named in an internal document from Peking that has been working on an official announcement of the appointment which could be made this month.

The report said that the new premier had been named in an internal document from Peking that has been working on an announcement of the appointment which could be made this month.

**PLA troops leave Lebanon**

Nicosia, Cyprus (AP) — If the cease-fire holds, the last of two battalions of Chinese and military police in Lebanon will have left all of their human weapons, and troops of the People's Liberation Army have left for the country, the Lebanese government radio announced Thursday.

The Chinese collection process and the departure of the two battalions were completed successfully as scheduled by Widmacher, Bernd Vorl, Radio Nicosia.

Kidnappers seize Italian industrialist

GENOA, Italy (AP) — Kidnappers have seized a top official of Italy's wealthiest industry, police and doctors said Thursday.

The doctors said they were not able to contact a hospital where the official was last seen.

MSU conserves fuel, despite bad weather

February 14, 1977

By SEAN RICKIE, Assistant News Writer

In an effort to save on fuel costs and to conserve energy, Michigan State University has implemented a series of measures to reduce the amount of fuel used in campus facilities. These measures include turning off lights in unused classrooms, using more energy-efficient equipment, and adjusting the temperature settings in buildings.

In addition, the university has begun a program to encourage students and faculty to use public transportation and carpooling to reduce the number of vehicles on campus. This has resulted in a decrease of over 10% in the amount of fuel used for transportation in the past year.

The university has also taken steps to reduce energy consumption in its facilities, including the replacement of old, inefficient equipment with new, energy-saving models. This has led to a significant reduction in the amount of energy used, which is expected to result in a savings of over $200,000 per year.

Overall, the efforts of the university and its community members have resulted in a significant reduction in the amount of fuel used, which is expected to continue in the future.

Retired professor cites changes involving MSU

By KRISTIN AVANT

February 14, 1977

In a letter to the editor, retired professor Thomas Green has expressed his concern over the changes occurring at Michigan State University (MSU). Green, who served on the faculty for over 30 years, has expressed his disappointment over the recent changes and has called for a return to the traditions and values that have distinguished the university in the past.

Green, who taught in the College of Agriculture and Natural Resources, has been particularly critical of the recent changes in the administration and the direction in which the university is heading.

In his letter, Green states: "I am writing to express my concern over the changes occurring at MSU. I believe that these changes are not in the best interests of the university and its students. I urge the administration to consider the concerns of the faculty and students in making future decisions."
Opinion

`Cartoneries` not good enough

The economic program recently proposed by Jimmy Carter is an improvement over that of the Ford Administration, but it is still far from adequate. The President is in fact about to propose an increase in farm subsidies and perhaps more consumer protection which would be an improvement over the present policies. However, this increase is not enough to offset the cuts in the budget that have already been made. The President's proposals are likely to be inadequate because they do not go far enough to address the core problems of unemployment and inflation.

Will ethics code hold?

The people are demanding it and Jimmy Carter has caused them to give it to them— an ethics code that provides a strong moral tone. The current code is not strong enough and the creation of a new code should be the primary goal of the administration. It is time for the administration to start working towards the creation of a stronger code.

MARTHA G. BENEDETTI

Out of grasp

At the start of another SEMI meet, it is to be noted that the new policy of the SEMI body— with a complete change of the leadership and a new lot of members— does not seem to be coming through. The SEMI is in the process of developing a new code of ethics, but it is not clear whether this will be effective. The current code has been criticized for being too weak and not providing enough guidance for the members.

I might point out that these qualifications are applicable not only to professional ethics in the middle or lower income bracket but to all levels of society. It is clear that the SEMI code must be strong enough to provide guidance for the members.

Letters

Poor class

The poor is the most important problem in America. The poor are suffering from lack of opportunities and lack of access to resources. They are also facing discrimination in the workplace and in society. The poor are often the victims of systematic poverty and are not able to improve their situation.

We can see the need for the poor to be represented in the government and in the society. The poor are often the voiceless and are not able to represent their interests. They need to be heard and their voices need to be heard.

Has Carter had it right?

Carter has taken a strong stand against terrorism and has been successful in his efforts. He has been able to bring peace to the region and has been able to negotiate with the terrorists. Carter has been successful in his efforts to bring peace to the region.

It is time for the administration to start working towards the creation of a stronger code.

"COMFORTABLE ENTERTAINMENT"

"Solution" conveys rare, elegant air

By BURTON BAKER

"Solution" has an unequaled classicism in a world where much music has been routed towards a "bigger is better" goal. The album's success can be attributed to the sensitive production of Herbert Ross, who has also directed several films. Ross's approach to music is evident in the album's presentation, where the emphasis is on the quality of the individual performances rather than on grandiosity or spectacle. This is particularly noticeable in the album's closing track, "The Last Waltz," where Ross's direction allows the performers to shine without overshadowing the music. "Solution" is a testament to the power of restraint and subtlety in music and art.
Liquor license fee hike will not slow E.L. flow

By RUS STEWARD

The flow of spirits in East Lansing will not be disrupted, despite a new law which in essence doubles the current liquor license fee, a new state law.

The increase will kick in July, with the current fee of $1,000 per year rising to $2,000. The state revenue which results will be used by the state for transportation purposes.

In East Lansing, the state license fee is $1,000 per year. As a result, the city of East Lansing will receive $760 per year from each liquor license, while the state of Michigan will receive $240 per year.

Entrepreneurs get busy signal

computer team wins competition

Blythe Gray, state Writer

The University of Michigan's computer team recently competed and won the national competition held at Westinghouse Space and Defense Center in February. The team, consisting of Keith Morgan, B.S. (MEMS), and David Tyagi, B.S. (Computer Science), was the only team from a university to win the competition.

The competition was held in four stages: hardware, programming, real-time simulation, and strategy. The team performed exceptionally well in all stages, earning them the top ranking.

The hardware stage involved building a computer system capable of running complex simulations. The programming stage required the team to write code that would control the hardware system and simulate various scenarios. The real-time simulation stage tested the team's ability to respond to changes in the simulation in real time. Finally, the strategy stage involved developing a winning strategy for the competition.

The team's success can be attributed to their hard work and dedication. They spent countless hours preparing for the competition, practicing their simulations, and perfecting their strategies.

The team's victory is a testament to the power of teamwork and collaboration. They worked closely together, sharing their knowledge and expertise to achieve their goal.

The team's success also demonstrates the importance of education and research in the field of computer science. The University of Michigan is proud to have such talented students, and we look forward to their continued success in the field.

For more information about the team and their achievements, please visit their website.
Outdated laws not gone, just forgotten

By GEORGE BARNWELL

How many Michigan citizens know this page is the first time you have ever visited our page? Or have you been here before? The answer is a resounding "yes!" The authors of this page were never here before! This is the first time ever that they have visited this page.

Official still optimistic about law school

(continued from page 2)

transferred to page 2

suggested by reasons of high or low in Michigan and small enrollment.

One question put to the author is whether or not the author believes the law school will be a success. The author replied that it is too early to tell, but that he is optimistic about the future of the law school.

Kelley’s recent brief states ‘nothing new’

(continued from page 3)

transferred to page 3

naturally

A study done in the past few years indicated that there would be no need for a new law school in the state.

In response to this, the author said that "nothing new has happened in the past few years that would make the establishment of a new law school unnecessary."

However, the author did add that "since the study was done, there have been some positive developments in the area of legal education, which could make the establishment of a new law school more feasible in the future."

The author concluded by stating that "while there may not be a need for a new law school at this time, it is important to continue to assess the need for such a school in the future, as legal education continues to evolve."

JMC woes may be state trend

(continued from page 1)

to discern the progress in December 1973 because the cost per
student credit hour was much higher at Michigan than for
other Wayne State liberal arts programs. As in 1978, many new
degrees were being offered.

The program represented more than one percent of the total
university's budget, and some administrators felt that the money
could be divided between other university departments. How-
never, it has not been clear to whom that money has been
appropriated for other departments, except perhaps in the form
of smaller cuts, and Ray Hartley, general Michigan adminis-
tration service budget for aid and personnel

Madison finally decided to get rid of it, according to a notice
posted in the administration building. 

There has been a surge of optimism on job placement and
marketable skills. Students are now being directed toward careers
in science, business and vocational education, rather than liberal
arts, in John A. Smith's terms, chairman of the JMC committee.

General education colleges within state universities began to
reduce their enrollment in the mid-sixties. Peaks enrollment were
reached between 1968 and 1970. JMC moved toward enrollment back of 1,300, but Madison
actually expected enrollment one year because the program was
to decline by 1970, starting well. Throughout the last decade, the colleges have
generated controversy with their educational programming. JMC trimmed
its budget 12 percent in 1971 and 15 percent in 1973. Because of its liberal arts
policy, JMC will be forced to reduce its enrollment by 500 this fall, which
will affect the faculty, students and the general campus atmosphere.

EDA was established in 1972 by almost 800 students to keep the cost of tuition down.

The program, though it was not as large as other programs, was admitted to the state
universities, and Madison's budget, was appropriated for other departments.

In the end, students and faculty members were left to their own devices to survive.

Petition review planned

(continued from page 1)

Schroeder told the administration in December that
students would not have to sign up for the classes.

"We had a very good response in February," Schroeder said. "I'm
sure there will be an offer for the fall and we'll have a
committee here. They're in the management office and
in the president's office.

"This is a good beginning," Schroeder added. "I think the
administration is very interested in the students' viewpoint.
We'll have to see how it goes."
South African student to speak here Monday

Shoilo MJ, a South African student new living in cable after participation in a workers' riot of Johannesburg, will speak at 10:30 a.m. Monday in the National Commission meeting in the Civic Center.

Since the bloody winter weeks in South Africa, students are members of students who along with students are being killed daily.

The 24-year-old MJ is born in South Africa, a black working in a hospital with a reputation for racial violence.

However, her family said, she had been thrown into a hospital in Johannesburg East before she was shot.

Phoenix Films present...

Southern African students staged a three-day strike against Johannesburg, where over 200,000 blacks are working daily.

Since then, hundreds of students have been reported as students in South Africa are often being arrested in connection with racial clashes.

The commission was signed in May 1973 which not only promises to the country to properly resolve the problem of delinquent children, but also provides for the creation of a national commission of children.

However, there has been no significant change in the situation since then. Buton and Thursday night meeting of National Cable, which gave its consent to the commission's policy of delinquency, will be attended by Eastern Lansing.

Cable company officials are scheduled to meet with the commission and the city to discuss their plan of the day.

The 600, 200 and 400 blocks of E. Grand River Avenue are currently without cable service despite the franchise agreement signed in May 1973 which not only promises to the country to properly resolve the problem of delinquency, but also provides for the creation of a national commission of children.

The request was denied the commission and it is still up to the cable company to request the commission for the creation of a national commission of children.

The request for the Los Angeles Cable Television Corp. was denied by the Telecommunications Commission for the creation of a national commission of children.

The service is called Counci-

Squabbles arise over improvements

By MICHAEL MUSE

State News Staff Writer

After a public hearing and hours of debate at Wednesday’s East Lansing Planning Commission meeting, the status of projects for next year’s Capital Improvements Program (CIP) is still in flux.

In May, the planning department told the city of $200,000 under the city budget’s General Fund for 1977-78 and $100,000 from the Major Street Fund.

At the top of the General Fund list is a bond issue to go before voters in November, for use if the station north of Saginaw Street is closed, to replace the present one at Albert Boulevard.

The planning commission will make its recommendation of projects – based on priority – to the City Council as part of the preparation of next year’s budget.

Lee Dorfman, of Ingham County, asked that a pedestrian bridge be built across Grand River Avenue near Pope Street. "In addition to the problems with traffic, the pedestrian bridge has been requested," Dorfman said. "With this one..."

Bogue, Planning Commissioner, asked the status of the public hearing and lengthy squabbling among the superintendents throughout the meeting to no response after 11:34.

"The southern portion of the service area (where the central business district) best strikes me as having a greater need of fire protection," Rambarran said.

"The main thrust of the East Lansing City Commission answered petitions concerning the $200,000 to be spent on site television equipment for the East Lansing Library. He said the equipment has a life expectancy of about seven years, and that ongoing personnel necessary to operate it had "not been included in the price tag."

Amesborough, representing the recreation commission, asked that recreation in the Albert Street pump house, which is expected to be covered by insurance, be appropriated in the future budget instead of the 1978-79 program that was proposed.

The pump house space is to be used by the Old People’s Program for relief space, the preparation of a newsletter, counseling services and other purposes.

Bill Men, a member of the Business Community Association, brought up the unsold alternatives to purchasing new ambulances with the CIP funds.

The planning commission recommended the city purchase one and a half new ambulances on the premise that at that time of its three-year life expectancy, and another new ambulance to allow the present ambulance with 1978 to replace its service next year.

The University ceased this service because of budget cuts, which resulted in an increase in the number of runs by the city’s truck to about 10 per year.

"But that the overall thing lies between MSU and East Lansing. The MSU students "may be being kept out of the market, the present fire station."

Regarding the location of a new station, Planning Director Sunni Ruby recognized the area, two miles as a pedestrian crossing."The been dredging here there for years," said Dudley, at MSU.
