Herewith is reproduced a map of the zoological gardens in Lincoln park prepared by "Tribune" artists from a map loaned by George Donaghue of the Lincoln park engineering department. Its primary idea is to show the animals and birds, but public comfort stations, boat houses, walks, and drives are also indicated. By the use of the map one unfamiliar with the zoo may find at once any one of the hundreds of specimens there housed. By consulting the index one can name and locate every specimen in the park.

The drive shown at the left side of the map—Stockton drive—runs in a due north and south line, and one can tell in exactly what direction he is facing by reference to this drive on the map.

All specimens are given an individual number except the birds, which are so numerous that to give each a number on the map might prove confusing. Instead the bird house has been given the number 12, and immediately after the name of the particular specimen there housed is the direction for finding it; that is, whether it lies to the left or the right of the entrance. The various animals and birds here shown occupy the cages as shown throughout the winter, with a few exceptions.

HOW TO USE THE MAP.

Look in the index for the name of the animal you wish to see. Finding it you will observe that it bears a number. This is a species number. Behind this number you will note a letter and another number. These latter are the directing numbers and letters. These directing numbers from 1 to 26 run down the left side of the map. The directing letters, beginning at A and ending with G, are placed at the top of the map. Now assume you wish to look up the Ostrich. Behind its name in the index you will find a number. It is 90. That is its individual number. Following the 90, you will find D 12. Now you are ready to find the Ostrich. Placing the finger on D at the top of the map, run it down in an imaginary line until you cross another imaginary line drawn straight from the number 12 at the left of the map. The intersecting point constitutes the approximate position of the Ostrich cage. By looking for the number 90 you can place it exactly.
