Cocaine Is Most Dangerous, Heroin Commonest of Narcotics

SLAVE of the opium pipe, living in a nightmare of fear, she got a main vein. The rising price of opium is driving her into a French drug de-

sitra. Yesterday she was able to buy her usual string of drugs to quiet her nervous storm. What about the whole world tomorrow? She could be a maniac? the end? Will she lose her rea-

dison? What will she do? She is too weak.

She is a "main line shoot-
d" in dope fiend paradise. Others who didn't inject their veins, were just "skin shooters" and rather looked down on by those who did. She was a "main line shooter." She knew of others who did the same thing as a "main line shooter," but she was never satisfied with it. She was a "main line shooter" and one of the few who dared to admit to it.

After opium and its deriva-
tives, cocaine is the next most common form of drug used by addicts. It is a highly pow-
erful drug that can produce a profound sense of well-being, including increased energy, alertness, and a feeling of euphoria.

As a result, the use of cocaine has become widespread, particularly among young people. The demand for cocaine has led to an increase in drug-related crime, including theft and fraud, as well as health problems such as addiction and overdose.

However, the harmful effects of cocaine use are well-documented. Chronic use of the drug can cause serious health problems, including addiction, mental health issues, and physical harm.

The use of cocaine is also a growing concern in schools, where the drug is often used among students to enhance performance or gain status. This can lead to a cycle of addiction, with students using cocaine to cope with the pressures of school and social life.

In conclusion, the use of cocaine is a serious problem that requires a comprehensive approach to prevention, treatment, and education. This includes efforts to raise awareness about the dangers of cocaine use, as well as initiatives to support individuals who are struggling with addiction and recovery.

The Truth About Dope

The and of the common is poisonous to the human body. It is highly dangerous to the nervous system, the heart, and other organs of the body. A small amount of cocaine can cause death in a matter of minutes, and even a single use can have long-term health effects.

However, the use of cocaine is also a growing concern in schools, where the drug is often used among students to enhance performance or gain status. This can lead to a cycle of addiction, with students using cocaine to cope with the pressures of school and social life.

In conclusion, the use of cocaine is a serious problem that requires a comprehensive approach to prevention, treatment, and education.
