Two Views of Chicago, Less Than 100 Years Apart—Tribune Makes Own Paper in Canadian Woods

This view of Chicago, a bird's-eye view from the lake shore, shows how the city looked in 1853, six years after the Tribune was founded.

Chicago's central district as it appears today. The area in this aerial view includes approximately the same area as that in the 1853 view.

From long rows of rolls like these, paper is fed into Tribune presses, printing thousands upon thousands per hour, for the more than a million subscribers who buy each day's issue.

Keating dam on Outardes river in province of Quebec, built by The Tribune to supply power for its Bale Camera, Que., paper mill. It stands 222 feet high in a Canadian forest wilderness.
