Longest Super in U. S.—160 Miles

On this relief map of Pennsylvania is shown the location of a $60,000,000 toll road to be opened to traffic July 1. Most of seven tunnels are higher ridges of the Allegheny mountains.

In this artist's drawing shows the general design of the superhighway, two super-highways operated by a 100-foot bridge. A typical viaduct for an intersection with a conventional highway. There are exceptions to the stage in only eight points between the lateral 160 mile project.
