THE FARM AND HOME.

THE CONTAMINATION OF OUR FOOD SUPPLIES.

By EDWIN BISHOP.

Our food supplies, it is well known, have been subjected to all kinds of adulteration, but it has never been more so than of late. In many cases, the food itself is contaminated with definite poisons. This is the case with the food supplies of many cities, and it is a matter of serious concern.

Contamination of Foods.

A recent study of the food supplies of the United States by a committee of the National Academy of Sciences has shown that a large proportion of the food supplies are contaminated with poisons. In many cases, the food itself is contaminated with definite poisons. In other cases, the food is contaminated with poisons that are not known to exist in the food itself. In still other cases, the food is contaminated with poisons that are not known to exist in the food itself, but are known to exist in the environment of the food.

The contamination of the food supplies is a matter of serious concern. It is a matter of grave concern that the food supplies of the United States are contaminated with poisons. It is a matter of grave concern that the food supplies of the United States are contaminated with poisons that are not known to exist in the food itself, but are known to exist in the environment of the food.

The contamination of the food supplies is a matter of serious concern. It is a matter of grave concern that the food supplies of the United States are contaminated with poisons. It is a matter of grave concern that the food supplies of the United States are contaminated with poisons that are not known to exist in the food itself, but are known to exist in the environment of the food.
