CHILDREN'S WASH FABRIC FROCKS: VIVID KNITTED SCARFS IN FAVOR

There are so many children today, who de tect them, and what a con set for the new season of clothing. A vivid knit and vivid knit scarf are now the rage among the younger set. The scarf, with its bright colors, is perfect for the little girl of today.

STATE NEWS

Skiing in the Mountains

Skiing in the mountains is a popular winter sport among children. Children enjoy the excitement of skiing down snowy slopes. It is a fun activity that promotes physical fitness and coordination.

Skiing Lessons for Children

Many ski resorts offer ski lessons specifically for children. These lessons are designed to teach children how to ski safely and enjoyably. Learning to ski at a young age can lead to a lifelong love of the sport.

Safety Tips for Skiing

It is important for children to wear appropriate safety gear while skiing, including helmets and goggles. They should also be taught the proper techniques for skiing to prevent injuries.

Dealing with Cold Weather

Children need to be prepared for the cold weather associated with skiing. They should wear warm and waterproof clothing to stay comfortable on the slopes.

How to Choose a Ski Resort

When choosing a ski resort for children, parents should consider factors such as the available amenities, the level of instruction offered, and the safety policies in place.

Skiing Equipment

Children need the right equipment to enjoy skiing safely. This includes skis, boots, poles, and sometimes even snowboards.

Conclusion

Skiing is a wonderful winter sport for children. It provides an opportunity for them to stay active and enjoy the beauty of the snowy mountains. With proper instruction and safety measures, children can have a fun and rewarding experience on the slopes.

PROPER COOKING OF FISH IS IMPORTANT

Dorothy McClellan of Johns Hopkins Hospital has a chow fish soup that is just right. Soup should be nutritious and satisfying, but it must be properly cooked to be palatable. Here are some tips for cooking fish:

1. Choose fresh fish. Look for eyes that are clear and shiny, gills that are pink or red, and flesh that is firm and elastic.
2. Clean the fish. Rinse it under cold water and pat it dry with paper towels. Remove any scales, fins, or bones that are visible.
3. Cut the fish into pieces that are about the same size. This will help them cook evenly.
4. Season the fish. Use salt, pepper, or other herbs and spices to taste.
5. Cook the fish in a covered pan or skillet. This will help retain moisture and flavor.
6. Cook the fish gently. Overcooking can make the fish tough and dry.
7. Serve the fish hot with a side of rice, vegetables, or bread.

New Post of Bees Found in a Maryland County

A new post of bees has been found in a Maryland county. The bees were discovered by a team of entomologists led by Dr. John Smith. The team spent several weeks collecting samples and analyzing the data. They found that the new post of bees is located in the eastern part of the county, near a large forested area.

Rotation Will Cost Loss

Prof. E. M. Hill, head of the department of entomology at the University of Wisconsin, presents the plan of a new rotation system for crop production. This system is designed to reduce the cost of rotations and increase the efficiency of farms. Prof. Hill explains that the new rotation system is based on the principles of crop rotation and soil management.

EXTREMES OF LIFE IN AIR AND WATER

The extremes of life in air and water are fascinating to study. Here are some examples of life in extreme conditions:

1. Life in the desert. The desert is a harsh environment, but some plants and animals have adapted to survive in this extreme climate. For example, the saguaro cactus can store water in its large, fleshy stems.
2. Life in the deep sea. The deep sea is a dark and cold environment, but some organisms have adapted to live in this extreme environment. For example, the vent shrimp can survive at temperatures of 200 degrees Celsius.
3. Life in the vacuum of space. Some organisms have adapted to live in the vacuum of space. For example, the methane bacteria can survive in outer space.

Poultry and Swine Tuberculosis Cure

Inoculated Fowls and Animals Were Disposed

(Proverb) From the United States Department of Agriculture

With the increasing knowledge concerning tuberculosis in livestock, the health departments of the U.S. Department of Agriculture have made improvements in methods of detecting and disposing of diseased stock. New methods of serial inoculation of swine, percutaneous inoculation of fowl, and other methods of detecting diseased stock and stock carriers have been tested.

A shipment of fowl from a certain farm was recently purchased with the idea of detecting any possible carrier. A test series of swine inoculated with the same organism and then tested for evidence of tuberculosis showed that the fowl were probably carriers of tuberculosis. The swine were then inoculated at the State Farm, and evidence of carrier condition was noted in each case.

After a period of time the swine were disposed of to the market as usual. It is reported that some of the fowl caught the disease from the pigs and died within a few days. As a result, several of the fowl were disposed of in order to prevent the disease from spreading.

Dr. Albert F. Zahn, a former congressman, who began his career as a journalist, has been appointed the new director of the Center for Defense Information, a non-profit organization that aims to promote national security through public education and advocacy. The center is the highest profile of its kind in the United States, with an annual budget of $10 million.

In the nation's capital, a series of new programs are being introduced. It is anticipated that these initiatives, which were designed to boost international trade, will be adopted into a comprehensive plan for the future.

The new programs include:

1. Trade expansion, which is expected to enhance bilateral relations.
2. Environmental protection, which will focus on global climate change.
3. Economic growth, which will be encouraged through investment in education and technology.
4. Cultural exchange, which will promote intercultural understanding.
5. Political stability, which will be achieved through democratic reforms.

The programs will be implemented in close consultation with the governments of all countries involved.

Judge Ends Gish Trial; Hits Duffel

A motion picture producer has been convicted of contempt of court after being found guilty of obstructing justice. The producer had failed to appear in court as ordered, despite repeated warnings. The judge has ordered the producer to pay a fine of $500 and to serve a year in prison.

U.S. Government Market Quotations

Washington, D.C.—For the week ending May 2, Northern cotton raised 7 1/2 cents, and Southern cotton remained unchanged. The market is expected to remain steady for the next few weeks.

Secretary of War and Secretary of the Navy

Secretary of War: "The security of the nation is of the utmost importance. We are prepared to take any necessary steps to protect our borders."

Secretary of the Navy: "The navy is ready to defend our country against any threat."

3 Killed, 23 Hurt When Tornado Strikes South Dakota

A tornado struck South Dakota, causing widespread damage and injuries. At least 3 people were killed, and 23 others were injured. The cause of the tornado is under investigation.

Federal Rights Filled: Paroles to Bring Relief to Inmates

The federal parole board has approved paroles for several inmates. The parolees have been sentenced for various crimes, including murder, robbery, and drug trafficking.

Randi Lutes, a nurse with 10 years of experience, was recently promoted to a new position. She is excited about the opportunities this new role presents and looks forward to making a positive impact in her new role.

Dairy cows must have plenty of salt.

Dairy cows have free access to salt in the United States. In fact, it is an important part of their diet, as it helps to maintain the flavor and consistency of their milk. Salt is essential for the proper function of many enzyme and hormone pathways in the body, and it helps to regulate water balance, muscle function, and metabolism. It is also essential for the production of many vitamins and minerals in the body. Without salt, the cow's ability to produce milk would be greatly impaired. In addition to this, salt is also important for the health of the hooves and legs of the cow. Salt is known to help maintain the pH balance of the feet and legs, and it helps to keep the hooves clean and free of excess moisture. Without salt, the cow's hooves could become cracked and infected, which could lead to lameness or even death. In summary, salt is an essential part of the diet of dairy cows, and it is important for their overall health and productivity. If you are interested in learning more about the importance of salt in the diet of dairy cows, you can read about it in the literature. In the United States, there are specific guidelines for the amount of salt that dairy cows should have access to, and these guidelines are based on the needs of the individual cow. If you have any questions about the importance of salt in the diet of dairy cows, you can ask a veterinarian or a nutritionist for more information.

Vote "Yes" for County Agricultural Agent On April 6th

BECAUSE: He is the representative of the U.S. Department of Agriculture, the State Department of Agriculture and the Michigan Agricultural College, through whom these institutions work in the County, and is the connecting link between the people who need the services of these institutions and the institutions themselves.

BECAUSE: Van Buren County cannot afford to abolish an office and an officer peculiarly fitted to advise on its Agricultural and Horticultural problems which are varied and of extreme importance. This office and officer forms the rallying point for effective organized effort in solving our problems of Production, Marketing, Home and Community Life.

BECAUSE: Van Buren County cannot afford to lose either the Federal and State money nor the services of the Research and Extension Specialists who have been doing such good work in the County.

BECAUSE: The expense is so small that a person would have to be assessed for $16,000 before it would cost them $1 per year.

Van Buren County Farm Bureau

AUCTION!
Having rented my farm, I will sell at Public Sale at my farm one mile east of Glendale, 3 miles west from Armstrong schoolhouse and 7 miles southwest from Gobles,

Tuesday, March 31, 1925
