FORCED PULLETIES ARE
BEING WIDELY
ERRED...

J. R. Rieke of the Cornell
weekly newspaper stated a belief
that by forcing early pullet hens
during the winter months, we can
produce a larger supply of fresh
eggs during the spring and early
summer months. By doing this, we
are able to provide a larger
supply of eggs to consumers.

The results of the study
indicate that forcing early
pullets can be beneficial.

1. Forced pullets made a better product. This is
because they laid more eggs in less time.

2. Forced pullets showed increased
production rates. This means that
they were able to lay eggs at a faster rate.

3. Forced pullets showed increased
batching rates of eggs than non-forced
pullets.

4. Forced pullets showed increased
egg quality as measured by factors such
as size and shape.

5. Forced pullets showed increased mortality
than non-forced pullets.

6. Forced pullets showed increased
birthing rates of pullets than non-forced
pullets.

7. Forced pullets showed increased
mortality after the birthing process.

8. Forced pullets showed increased
hatching rates of eggs than non-forced
pullets.

9. Forced pullets showed increased
chick survival rates than non-forced
pullets.

10. Forced pullets showed increased
productivity rates than non-forced
pullets.

In summary, forcing early pullet
hens can be beneficial to the
industry. It allows for an increased
supply of eggs during the spring
and early summer months, which
is beneficial to consumers.

LAST WORD IN KNITTED FASHION DRESSES

We have recently seen a variety of
new dresses in the stores that
combine comfort and style.

1. The dress has a body-hugging fit
and is made of stretchy fabric to
enhance its shape.

2. The dress features long sleeves
and a V-neckline for added
versatility.

3. The dress is available in a variety
of colors and patterns to suit
everybody's style.

4. The dress is made of high-quality
fabrics that are durable and
long-lasting.

5. The dress is designed to flatter
everybody's figure and enhance
their natural beauty.

In conclusion, these new dresses
are a great addition to any woman's
wardrobe and are sure to
attract attention wherever they
are worn.

Yeast Foam

The best way to learn to
cook—begin making bread.

"The Art of Baking Bread"

Dairy Facts

If milk is to be kept from souring
during shipment in the hot summer
months, it must be treated properly.
It is drawn from the cows, sterilized
in the lactic department of the farm
and then cooled. Special directions
for the following are advised.

1. Keep the tank at 40°
Fahrenheit. It is not necessary
to cool to 40° as this is the temperature
at which the milk is drawn from
the cows. The milk is kept at
this temperature for a short
period of time before it is
cooled to the desired temperature.

2. Start souring the milk by
adding a little yeast to the
cooled milk. This will
accelerate the cooling process.

3. Poor souring over the cooler
crank. The milk should be
cooled to 40° before being
transferred to the cooler.

4. Keep the cooler at 40°
until the milk is cooled to
the desired temperature.

In conclusion, proper care and
handling of milk are essential
to maintain its quality.

Indians Gay in Bushkin Clothes

The annual powwow held among
the Haudenosaunee Indians in the
western United States, is a
beautiful event. The Indians
present their traditional clothing,
dance, and music.

Also, the powwow provides
opportunities for the
indigenous people to
interact with one another
and to share their
culture with the
outside world.

MOTOR ENERGY

Reducing carbon emissions in automobiles
is critical for the environment.

The transportation sector
is responsible for a significant
portion of greenhouse gas
emissions, with automobiles
accounting for a major
capital in this area.

Efforts are being made to
develop sustainable
transportation solutions,
which include electric vehicles
and public transportation
options.

In conclusion, reducing
carbon emissions in
automobiles is a crucial
task that requires
innovative solutions
and collaboration among
diverse stakeholders.
