GOLDS HIGH

Golds High stepped into class C
long enough to beat Hartford here and
make the team. The victory over Holmes
in evening for Friday at
2:30 at the high school,
the box and the visitors to 2:30,
when Holmes took the job for
practice. "The Go" sure is in Golds.

KENDALL

Mr. and Mrs. W. L. Spangle
moved to Kalama Thursday,
they have gone to house-
keeping.

Little James Brown, son of Mr.
and Mrs. C. D. Brown, is quiet
ill.

Rev. C. H. Harper of Lansing
visited Kendall.

Mrs. Carrie Kingsley
Wednesday.

Mr. Andrew Becker is so well
that they don’t worry any more.

Mrs. Alice King has a cold,
her voice is quiet.

Many of these boys are home
grown, yet there are more
boys coming from out of town,
boys that were attracted
here from other places and it is no
small credit to the community to
not only hold its own but attract
others as well.

There must be reasons for this
dilapidated and reduced
condition. What are the
reasons? What can be done to
improve this condition?

Mr. and Mrs. E. M. Stewart
have retired to Germany with
their three sons. The boys will
visit their mother, Mrs. Lillie Coggins.

Mr. Braitland has moved
from Kalama to Keefer, and Mr.
and Mrs. Fred Caves and a friend
from Overland.

Overland family.

Some of our farmers who have
landed in the river have
them more before this
year. Our tomatoes are
well set, the world will
have to go back for land as they are

Searching for Fundamentals of Plant Life

By JOHN W. COULTER
Brooklyn Botanic Garden, New York

The Rose-Thompson Insecticides Company, New York, recently announced a new insecticide for the control of the potato bug and other pests of potatoes and other crops. The new insecticide is a mixture of thiophanate-methyl and potassium iodate. It is effective against a wide range of pests, including aphids, thrips, and whiteflies. The company claims that the insecticide is highly effective and that it can be applied at any time during the growing season. The insecticide is available in liquid form and can be applied by spraying or dusting. The company also provides instructions for safe and effective use of the product.

Insecticides are widely used in agriculture to control pests, but their use is controversial. Some scientists argue that insecticides can harm the environment and contribute to the development of resistant pests. Others argue that insecticides are necessary to protect crops and ensure food security. The use of insecticides is regulated in many countries, with strict guidelines for their application and disposal. The discovery of new, effective, and environmentally friendly insecticides is a major goal of entomologists and agricultural scientists.

In this article, we will explore the history of insecticides and their role in agriculture. We will also discuss the challenges and controversies surrounding the use of insecticides and the efforts to develop safer and more sustainable alternatives.

The Story of Insecticides

The history of insecticides dates back to ancient times, when people used natural substances to control pests. For example, the ancient Egyptians used garlic to control pests in their gardens. In the 19th century, scientists began to isolate and synthesize compounds with insecticidal properties. These compounds, known as synthetic insecticides, were highly effective and revolutionized pest control. However, their use also had unintended consequences, such as the harm they caused to non-target organisms and the environment.

Today, scientists continue to search for new and effective insecticides that can be used safely and sustainably. This involves understanding the biology and behavior of pests, as well as the effects of insecticides on target organisms and the environment. The development of insecticides is a complex and multi-disciplinary process that involves research in areas such as genetics, biochemistry, and environmental science.

In the future, it is likely that we will see a greater emphasis on sustainable pest control practices, such as integrated pest management (IPM). IPM involves using a combination of cultural, biological, and chemical control methods to manage pests in an environmentally friendly way. The goal of IPM is to reduce the reliance on chemical insecticides, while still maintaining crop productivity.

In conclusion, the story of insecticides is a complex one, with a long history and many challenges. As we continue to develop new and effective insecticides, we must also consider their impact on the environment and the long-term sustainability of pest control practices. The future of insecticides is likely to involve a mix of traditional and new methods, as scientists and policymakers work to find the best way to protect crops and the environment.
MICHIGAN ELECTED CATHOLIC PRIEST AS CONGRESSIONAL DELEGATE IN 1823

The only priest of the Roman Catholic Church ever elected to Congress was Father Gabriel Richard, of Detroit, Michigan. He was elected in 1823 as a Democratic-Republican, and served one term, from 1825 to 1827. He was the first Catholic priest elected to Congress, and the first Catholic to hold a federal office in the United States.

Father Richard was a prominent figure in Detroit and the midwestern United States, and his election to Congress was a significant event in the history of Catholicism in America. As a congressman, he advocated for religious freedom and for the establishment of public schools.

The Catholic Church in the United States was still a relatively new and controversial institution in 1823, and Father Richard's election to Congress was a testament to the growing influence of Catholicism in American society.

The Catholic Church has a long and rich history in the United States, and Father Richard was a key figure in that history. His election to Congress was a significant milestone in the development of Catholicism in America, and it helped to pave the way for future Catholic politicians and leaders.

State Fire Loss

Luminating a decrease of 3,754,560 in the total fire losses for the year 1925, according to a report issued by Frank D. Lane, state fire statistician, which shows a decrease in fire losses of $1,754,560 in 1925, while damage loss was $18,644,126.

This is the first decrease from the previous year for the past four years, and the decline in the total fire losses is due to a combination of factors, including the increasing use of modern fire-fighting equipment and the improved training of firemen.

The decrease in fire losses is also due to the increased use of fireproof materials in buildings, the improved design of buildings, and the increased use of fire extinguishers.

Priced To Win
Instant Public Acceptance
To immediately dominate the field of low-priced cars, General Motors first developed the Pontiac Six as a car of high quality—then priced it at a figure so low that only General Motors could possibly achieve it. Masterful power, brilliant flexibility, enduring stamina—enhanced by a new order of beauty, dignity and comfort—are the Pontiac Six qualities that are kindling the enthusiasm of buyers wherever this car is displayed. One view—one ride—reveals that the Pontiac Six was designed to stand unchallenged in its field and priced to win instant public acceptance.

The world is not big enough to make of its girls.

Every day and every hour, every day and every hour, girls are pouring from every corner of the earth. What are they all doing? Where are they all going? No one knows. Perhaps they are all going to the same place. Perhaps they are all doing the same thing. Perhaps they are all finding out how to be girls.

What has become of the "girlhood" that we used to know? The girlhood of yesterday, the girlhood of tomorrow, are both gone. Perhaps they are all living in the same house. Perhaps they are all doing the same thing. Perhaps they are all finding out how to be girls.

A girl is a tireless worker. She is always working, always growing, always changing. She is always learning, always teaching. She is always meeting new people, always making new friends. She is always finding new ways to do things, always finding new ways to be girls.

The world is a big place, and girls are all over it. They are all doing different things. They are all meeting different people. They are all finding out how to be girls.

Perhaps they are all working in the same office. Perhaps they are all teaching in the same school. Perhaps they are all doing the same thing. Perhaps they are all finding out how to be girls.

The world is a big place, and girls are all over it. They are all doing different things. They are all meeting different people. They are all finding out how to be girls.

Perhaps they are all working in the same office. Perhaps they are all teaching in the same school. Perhaps they are all doing the same thing. Perhaps they are all finding out how to be girls.

METHUSELAH'S WIFE

The Story of A Girl
Edgar Y. Weeks
Who Married Too Many Men

START THE STORY HERE

The day was clear and bright, the sun shone down on the small village and life was easy and simple. A quiet little girl, with a friendly face and a sweet smile, was walking down the street. She was carrying a small basket in her hand, filled with wild flowers. The people in the village greeted her as she passed by, and she waved back in return. It was a happy day, and the little girl was filled with joy.

THIRTY-ONE

Accepting a green-topped table, friends took their seats in the parlor. On the little table stood a vase of flowers, a book, and a few small candles. The room was warm and cozy, and the children were happy to be there.

"What's for dinner, Charlie?" came a voice from the kitchen.

"Just what's here," answered Charlie, "and it's good enough for us."

"Oh, dear, I wish I could have something better," said his mother, "but we have to be content with what we have."

"I'm sure it will be delicious," said Charlie, "and I'll eat it all up with relish."

THIRTY-TWO

Your dogs are eating food from daily packages, and they are happy. Your cats are eating food from daily packages, and they are happy. Your parrots are eating food from daily packages, and they are happy. Your fish are eating food from daily packages, and they are happy. Your rabbits are eating food from daily packages, and they are happy. Your birds are eating food from daily packages, and they are happy. Your snakes are eating food from daily packages, and they are happy. Your lizards are eating food from daily packages, and they are happy.

"Oh, yes," said Charlie, "I'm sure it will be delicious."

"I'm sure it will be delicious," said Charlie, "and I'll eat it all up with relish."

May Cut "Pioneer" In Society's Name

The word "pioneer" is often used to describe the first person to do something. It's a term that's used to describe people who are brave and adventurous. The word is often used to describe people who are able to overcome great obstacles.

"Oh, yes," said Charlie, "I'm sure it will be delicious."

"I'm sure it will be delicious," said Charlie, "and I'll eat it all up with relish."
