LOCAL BREVITIES

Lloyd Van Voorhees is gaining steadily.

O. P. and Earl Hudson were in Otsego on business Tuesday.

Democratic convention, South Haven, March 31 at 10:00 to elect delegates.

Y. H. Evans' auction next week Tuesday and J. B. Dinkel's Wednesday. See ads.

Mildred Ringel was able to resume her school duties Monday after an extended absence.

Good Friday Service at the Methodist Church at the hour 2:00 to 3:00. Rev. Mann will give the discourse. All the people of the community are invited.

Mr. and Mrs. O. E. Scarlett arrived home from Florida Monday just in time to tunnel in through the snow. They shipped us some real oranges, too, ripened on the trees.

Mrs. James Babbitt passed away at her home northwest of town Monday. Funeral will be held in Bloomingdale Thursday at two o'clock, slow time, with interment in Base Line cemetery.

Harry Veley entertained about 25 boy friends at his home last Friday evening. The time spent in games and refreshments and all present voted Harry's a good place for a good time.

Mrs. C. E. Smith, who is spending the winter with her daughter in Danube, Minn., received the sad news last week of the death of her brother, George Knapp, which occurred at his home in Denver, Colo. on March 15.

There will be an Easter Service next Sunday at the Community church at 11 o'clock. The program will consist of recitations, exercises and songs by the children of the Sunday school. Also special music by the choir and a short talk by the pastor.

Remember the soils train here next Wednesday from 9 to 2. This is the only stop scheduled in Van Buren county this year and all should avail themselves the privilege of bringing in soils for testing. Don't miss the date, next Wednesday from 9 to 2 fast time, at depot in Gobles.

Portage winning the state championship with their competitor scoring only 19 points in the final game, convinces us that Gobles had a high ranking team in class D this year. Had they been fortunate enough to have drawn other districts and regionals than the ones in which Portage competed they could easily have been in the finals. We congratulate them in their showing against this state champion team.

BROWN DISTRICT

Mr. and Mrs. Lewie Camfield spent Saturday at the home of Mr. and Mrs. V. Kalisiak.

Everything is snowbound in this district.

Mrs. Lavina Camfield who broke her wrist some time ago is doing nicely.

Mr. and Mrs. Lewie Camfield and family spent Sunday afternoon at Andy Camfields.

The pupils of Brown School who were neither absent nor tardy during the month of March were; Leva Camfield, Nellie Leonard, and Paul Camfield. Those high in Scholarship were Dorothy Byer, Mable White, Leva Camfield, Frances White, Nellie Leonard, Ester Healy Paul Camfield, Mary Redman, and Jack Redman. The highest scores in citizenship and deportment were received by Nellie Leonard and Paul Camfield. The pupils attended the singing class at Bloomingdale in spite of the storm. Loren Camfield transported them.

Spring Began

Spring was ushered in here with one of the greatest snows of the season and the 22nd found us shoveling out with a vengeance.

At least two foot of snow greeted us Tuesday morning and school was dismissed for the day.

A new feature was the heavy thunder and sharp lightning during the worst of the blizzard Monday afternoon. Few remember such an occurrence. We hope it augurs an early spring.

Train only an hour late, first bus at noon.

The snow brought in all styles of conveyances--horseback, one horse sleighs, bobs, wagons and other unimaginable means, all but the ox cart.

Obituary

Mrs. Isadore Welbaum, 64, wife of Frank Welbaum of Trowbridge, died quite suddenly in her home last Friday night. She had been in ill health the last three years. She had lived in the vicinity of her late home about 15 years, but was married only eight years ago to Mr. Welbaum.

Besides her husband she is survived by a daughter, Mrs. Winnie Isham of Middleton, a sister, Mrs. Pearl Tansley of Sparta and two brothers, O. G. Hartman of Alma and S. D. Hartman of Muskegon Heights, as well as four grandchildren and one great grand child. Mrs. Tansley has been staying with her sister for some time prior to her death.

Funeral services were held from the home Tuesday afternoon and later from Community church in Gobles. Interment was made in Robinson cemetery. The Rev. Mr. Rawlinson of Bloomingdale officiated.

Those from away who attended the service were Mrs. Harvey Jenkins and Harold Myers and mother, Mr. and Mrs. Spencer Hartman of Grand Rapids, Mr. and Mrs. Henry Isham and son of Middleton, Mrs. B. Hartman and son, Roy of Battle Creek and Mr. and Mrs. S. D. Hartman of Muskegon Heights.

Card of Thanks

We wish to extend our heartfelt thanks to all our neighbors and friends for their expressions of sympathy and the beautiful flowers. Also the Merson Aid and North Point and Base Line neighbors and friends for their lovely floral pieces, to Rev. G. W. Rawlinson for his comforting words and the ladies for the singing.

Frank Welbaum, Mr. and Mrs. Norman Tansley, Mr. and Mrs. Henry Isham, Mr. and Mrs. L. D. Hartman.

Card of Thanks

We want to thank all who brought flowers, Mrs. Odell for singing, Rev. Hayes for his words of comfort and all who helped us in anyway at the death of our mother.

Martin Mahieu and family.

Card of Thanks

We are most grateful to our neighbors, who so kindly assisted with help, sympathy, and flowers, during the illness and at the death of our sister, Anna Pullman.

Mr. and Mrs. L. W. Pullman

Busy Workers

March 17 the club met with Eva Eastman for an all day meeting. Gladys Camfield presented the members with a cake decorated in St. Patrick's colors.

Twelve members responded to roll call with an Irish story. Leota Kridler and Ada Pike had charge of the program and kept the ladies amused from start to finish. Leota read a paper on "imagine" and Ada overflowed with sympathy.

All departed for their homes to meet with Laura Manning April 7.

KENDALL

Mrs. Louie Sweet is recovering from the flu.

Mrs. Phoebe Leversee has been quite ill with flu and Mrs. Nellie Bowers has been caring for her.

Edward Mahieu entertained the members of his Sunday school class Saturday night, with ice cream and cake.

Mrs. Etta Becker and Wm. J. Richards spent Sunday in South Haven visiting Mrs. Becker's sister, Mrs. Grills.

Laura Kirby, a teacher in the Allegan schools, spent the week end with Lillian Ray at the home of her parents, Mr. and Mrs. W. I. Ray.

Mrs. Martha Hofacker is entertaining some nieces from Detroit and Belding. They all motored to Otsego Monday where they will visit relatives.

Mr. and Mrs. Paul M. Waber entertained Sunday: Mr. and Mrs. Carl Harris of Kalamazoo. Mrs. Aleda Champion is also spending a few days with Mrs. Waber.

Mrs. Hazel Waber entertained Friday night: Mr. and Mrs. Joe Kane, Mrs. Charlotte Kane and Mrs. Harold Foster and small sons, Jimmie and Donald, all of Kalamazoo.

Avery Willis' home burned to the ground Thursday morning. They saved some of the furniture on the ground floor, but lost all bedding, clothing, etc. in the upper rooms.

Mr. and Mrs. Jack Gallagher of Shickshinny, Pa. came Saturday to visit her sister, Mrs. Jennie Wilkinson. They will remain sometime. Mrs. Wilkinson is gaining slowly from a severe illness.

Mr. and Mrs. Thomas Freeman of Martin spent Friday with Mr. and Mrs. Frank Lewis.

Mr. and Mrs. D. V. Chamberlin entertained Sunday their son, Vern and family of Kalamazoo and Mr. and Mrs. Loel Bachelder and sons.

Mr. and Mrs. Frank Lewis attended the funeral of Mr. Lewis' sister, Mrs. Monroe at Bangor Sunday.

Mrs. Loel Bachelder and mother, Mrs. D. V. Chamberlin spent Saturday in Kalamazoo.

Mrs. Della Ransler celebrated her birthday anniversary March 17. She was given a surprise by her daughter and grandchildren coming from Kalamazoo. Those present were Mr. and Mrs. J. VanDyke and Mr. and Mrs. Bernard Hofacker of Kalamazoo; Mr. and Mrs. Ralph Hofacker of Parchment, Mr. and Mrs. Frank Schoolcraft and son, Earl. They brought their dinner with them as well as several nice gifts for Mrs. Ransler.

WAVERLY

Mr. and Mrs. A. C. Blakeman were dinner guests of Mr. and Mrs. Al Coulson of Gobles Sunday.

Mabel and Fred Brown spent the week end at L. G. Brown's.

Donald White, who has been ill and under the doctor's care for some time, resumed his work as milk hauler to Otsego Monday.

Mildred Sage spent the week end with Frances Austin.

Mildred Herron of Kalamazoo spent the week end at Arthur Herron's.

Mr. and Mrs. John Russell called on Mrs. Ida Snell in Kalamazoo last Thursday.

W. C. Gault and family were Sunday guests at Ed Markillie's.

Mr. and Mrs. George Connery of Gobles were Sunday callers at R. E. Sages.

Mrs. Ida Frisbie entertained the Ladies Aid last Wednesday. About thirty were present. The next meeting will be with Mrs. Rev. Johnson Wednesday, March 30.

Short history of Ireland; Mrs. Beadle, read by Mrs. Curtiss.

Ireland's Economic Relations to Great Britain, Mrs. Green.

Adjourned to meet with Mrs. Connery for Guests day March 31, 1932.

Our Trip to Florida

By Lillian Bowles

'Twas January 5th in 1932, we started for the Sunny South, the state of Florida. With stoves and tinware, cots and tent; we hurried along, no time was spent.

To meet our friends, 'twas "Joe" not "Bill", we sailed away from Covey Hill. On to the Sunny South we sped, to meet the mist and rain ahead. The roads were fine, just simply dandy; we landed first night in Columbus, Indiana. Then to Kentucky we visited the cave, where Richard Collins his own life he gave. 'Twas a wonderful sight of nature and art, but give me the open and not die in the dark.

We journeyed along to Nashville, Tennessee, where traffic was thick, as thick could be. We missed each other, it sure was a pity; we met not again in that crowded old city.

We went to Indianapolis and Atlanta city too, at times it seemed impossible to motor our way through but clinging to the steering wheel, and stepping on the gas, we landed on the other side of Atlanta at last. So we motored alone through old Georgia town; 'twas lonesome we said, many darkies around. We hurried along, from early morn until late, we finally landed in old Florida state. We arrived at Lake City and entered the camp to await the arrival of our friends we had lost, to our surprise, as we were looking around, there were Luie and Joe, on the old camp ground.

Annual Spring Election

Notice is hereby given that the Annual Spring Election will be held at Town Hall, Kendall, precinct No. 1 and Village Hall, Gobles, precinct No. 2, within said Township, on

MONDAY, APRIL 4, A.D. 1932

For the purpose of voting for the election of the following office, viz:

Supervisor; Township Clerk; Township Treasurer; Highway Commissioner, Justice of the Peace (full term); Justice of the Peace (to fill vacancy); Member of the Board of Review, 4 Constables; Overseer of Highways.

Relative to Opening and Closing of Polls

Act 351--Part IV--Chapter VIII

Public Acts of 1925

Section 1. On the day of any election the polls shall be opened at seven o'clock in the forenoon, or as soon thereafter as may be, and shall be continued open until five o'clock in the afternoon and no longer; Provided, that in townships the board of inspectors of election may, in its discretion, adjourn the polls at twelve o'clock noon, for one hour, and that the township board in townships and the legislative body in cities and villages may by resolution adopted fifteen days prior to the election and published with the notice of the election, provide that the polls shall be kept open not later than eight o'clock in the evening of the same day.

THE POLLS of said election will open at 7 o'clock a. m. or as soon thereafter as may be, and will remain open until 6 o'clock p. m. Eastern Standard Time, of said day of election, unless the Board of Election Inspectors shall, in their discretion, adjourn the Polls at 12 o'clock, noon, for one hour.

H. G. KNOWLES,

Clerk of said Township.

We are ready for your job work. Bring it in today.

Annual Spring Election

Notice is hereby given that the Annual Spring Election will be held in Township of Bloomingdale, Precinct No. 2, County of Van Buren, State of Michigan at Gobles Opera House within said township, on Monday, April 4, A. D., 1932

For the purpose of voting or the election of the following officers, viz:

Supervisor; Township Clerk; Township Treasurer; Justice of the Peace, full term; Justice of the Peace, to fill vacancy; Member of the Board of Review; Highway Commissioner; 4 Constables, 4 Overseers of Highways.

Relative to Opening and Closing of Polls

Act 351--Part IV--Chapter VIII,

Public Acts of 1925.

Section 1. On the day of any election the polls shall be opened at seven o'clock in the forenoon, or as soon thereafter as may be, and shall be continued open until five o'clock in the afternoon and no longer; Provided, that in townships the board of inspectors of election may, in its discretion, adjourn the polls at twelve o'clock noon, for one hour, and that the township board in townships and the legislative body in cities and villages may, by resolution adopted fifteen days prior to the election and published with the notice of the election, provide that the polls shall be opened at six o'clock in the forenoon, and may also provide that the polls shall be kept open not later than eight o'clock in the evening of the same day.

The polls of said election will be open at 7 o'clock a. m. and will remain open until 6 o'clock p. m. Eastern Standard Time of said day of election, unless the Board of Election Inspectors shall in their discretion, adjourn the Polls at 12 o'clock, noon, for one hour.

CECIL PLUM, Twp. Clerk

"Egg" in Conversation

Conversational the egg is an important article. Count the proverbs you know which contain the word egg. "You can substitute a turnip for an egg only once," says the Chinaman. "You can't make an omelet without breaking the eggs," says the Frenchman. "Don't put all your eggs in one basket," say we Americans. "From the eggs to the apples," said the Romans in describing their grand dinners. Even our slang uses the word, "He is a good egg."

Indian Wampum

Lafitau (1724) says that in his time the usual size of a wampum belt was 11 strands of 180 beads each, or about 1,980 wampum beads. There are references to belts composed of 6,000 and 7,000 beads. The English colonists were compelled to use wampum in trading with the Indians. Three dark or six white beads were about the equivalent of an English penny.

Nothing New

A dietitian announces that while eating exactly the right amount rests and refreshes the body, overeating actually causes a feeling of fatigue. It isn't a new discovery, as he seems to think. Years ago, down in the country, I used to be told, "You eat so much, it makes you poor to carry it."--Detroit Free Press.

LEGION TO SPONSOR MICHIGAN AIR TOUR

Announcement was made recently by Leslie P. Kefgen, state commander, that the 1932 Michigan Air Tour will be sponsored this year by the Michigan department of the American Legion. Dates and itinerary of the tour will be set later by the Legion's aeronautical committee headed by Thomas Walsh, of Grand Rapids, as chairman.

Commander Kefgen yesterday announced that he plans to pilot a plane in the tour this year. As a member of the air service during the World War, Commander Kefgen is a capable pilot and is interested in the promotion of aeronautics in Michigan. The primary purpose of the tour, Kefgen said, is to promote statewide interest in aviation.

In sponsoring the tour the American Legion Michigan department will cooperate with the state department of aeronautics headed by Major Floyd Evans.

Ames Heads Engineers

George M. Ames, civil engineer of Grand Rapids, and member of the firm of Owen Ames-Kimball, was elected president of the Michigan Engineering Society at the annual convention held recently. Other officers elected are: Charles M. Ziegler, deputy highway commissioner, Lansing, vice-president; Frank H. Stevenson, engineer of the Detroit water works system, treasurer; Andrew Lenderink, Kalamazoo, secretary, and L. E. Williams, manager of the plant of the Ray Sand and Gravel Co., Detroit, director at large. The new board of directors will select the next convention city.

RESTFUL SLEEP for FRETFUL, FEVERISH CHILD — With Castoria's regulation

When your child tosses and cries out in his sleep, it means he is not comfortable. Very often the trouble is that poisonous waste matter is not being carried off as it should be. Bowels need help—mild, gentle help—but effective. Just the kind Castoria gives. Castoria is a pure vegetable preparation made specially for children's ailments. It contains no harsh, harmful drugs, no narcotics. Don't let your child's rest—and your own—be interrupted. A prompt dose of Castoria will urge stubborn little bowels to act. Then relaxed comfort and restful sleep! Genuine Castoria always has the name:

Army Olympic Equestrians Hold Their First Workout

Army Olympic Equestrian team of the U. S. Army is pictured at Fort Rosecrans, Calif., staging the first workout this season of its famous horses. Left to right in this triple jump are Capt. W. T. Bradford on "Suzanne," Lieut. Carl Raguse on "Sir Neal," and Lieut. Peter Hains on "Don R."

U. OF M. COLLEGE OF ARCHITECTURE ANNOUNCEMENT

The College of Agriculture of the University of Michigan announces the annual competition for the George G. Booth Traveling Fellowship in Architecture. The stipend is \$1,200, the competition being open to graduates of the school who are unmarried and not yet thirty years of age. The competition in design begins on Saturday, April 7. Graduates resident in Michigan will make their drawings at the University; those living in other states should make arrangements with their employers or others to act as supervisors of the preliminary sketch and the final drawings.

Confiscate Logs Cut Upon State Property

Logs cut unlawfully on state delinquent lands near Buckley were confiscated and sold recently by Sheriff Charles H. Nixon. The log cutting had been discovered by Conservation Officer Glenn Erdley and reported by him to his superior at Traverse City, Ed Thalman, who in turn reported it to Lansing. Auditor General O. B. Fuller ordered the confiscation and sale.

Money back guarantee. Ask for NEVERSLIP pulleys on All Power Machinery you buy. Write for free descriptive folder and prices.

ROSENTHAL CORN HUSKER CO. Milwaukee, Wisconsin

Cost of Helping Indigents Skyrockets

In caring for indigents, Michigan spent \$11,965,689 more for the year ending Sept. 30, than for the same period ending Sept. 30, 1930, according to combination by the Department of State from annual reports of Superintendents of the Poor of Michigan's 83 counties. This compilation is required by law annually.

Almost all of the increased cost was due to unemployment. In 1930 the total cost of temporary aid for indigents outside institutions was \$10,180,046, while in 1931 the cost was \$21,654,963.

The number who received assistance in 1930 was 273,763 as compared with 668,963 in 1931, an increase of 395,200.

During the year covered by the present compilation, 21,670 persons were aided in infirmaries; 2,274 in other institutions; 619,326 were given temporary aid; and 25,693 were received permanent aid outside institutions.

Poor farms and equipment in the state are valued at \$15,043,553, the compilation shows.

Helped Establish Clare Bank in '85, Still Its Cashier

Forty-seven years is not an extreme age for a bank, but it is a long time for one man to serve as cashier. That is the record held by Clark H. Sutherland of the Clare County Savings bank of Clare. He was one of the founders of the institution which never has had any other cashier.

Associated with Mr. Sutherland in the organization of this bank was Mr. Woolsey, now a resident of Saginaw; C. W. Perry, an attorney, and Joseph Hudson, a farmer and lumberman who resided north of Clare.

The bank first opened its doors March 2, 1885, and Mr. Woolsey served as president for two years. Mr. Perry was president until his death a little more than a year ago.

Mr. Sutherland never aspired to any other position in the bank and he always has been recognized as its directing head. He is an ardent baseball fan and a good fisherman.

Business Good in Flint

In spite of the fact that Flint is a highly industrialized manufacturing city engaged in the manufacturing of automobiles and automobile accessories, the opinion is the business continues as good there as in other cities of its size or in other sections of the country. None of our plants have shut down completely, even though some have curtailed production considerably. Since Buick and Chevrolet are perhaps the two leading lines of automobiles manufactured by General Motors, the city feels fortunate in having them in Flint.

Employment has been staggered for several months, which means that the maximum number of workmen are on payrolls even though they are securing in most instances only about three days per week. The banking structure of Flint remains sound.

By virtue of the size of the automobile industry Flint feels that it will be one of the first industries to show the pathway to normal times.

Kalamazoo Betterment

Kalamazoo reports that it has always had some industries going well during the depression but their names sometimes shift. Some industries that are going well are Kalamazoo Vegetable Parchment Company; Sutherland Paper Company; Kalamazoo Stove Company, and the Kalamazoo Pant Company. Other industries which are part of the automobile industry, namely, Limousine Body Company, Checker Cab Manufacturing Corporation; Fuller & Sons, truck transmissions; Acme Machine Products, castellated nuts; and Shakespear Products Company, dash controls, as far as can be seen have not been greatly energized by the auto industry, but are hopeful.

NATIONAL FIRE LOSS 136 TIMES U. OF M. RATE

What rigid watching of fire hazards can do to lessen fire losses, is indicated by a comparison of the fire losses at the University of Michigan during 1930-1931 and the average losses in the county at large. Nine small blazes cost the University \$387.72. With a combined student and faculty population of 13,364 this makes an annual per capita loss of approximately three cents, while the same figure for the United States at large was \$4.10, or 136 times as great. If the several hundred clerical and other employees of the University were counted, the University cost would be even lower.

Critics will point out that certain factors aid in keeping the fire hazards of the institution down. The whole University "population" is never in the buildings at the same time, many of the structures are practically fireproof and special fire dangers which are present in some industries do not exist. Balancing these points, however, are the facts that many of the buildings are in use more hours a day than the average factory, the older buildings, some dating from 1841, are far from fire proof, laboratories and chemical stores hold great fire dangers unless carefully used, and in dormitories there are much the same chances for fires which exist in the average home outside the kitchen. Smoking is not permitted in University buildings except offices and dormitories and social centers such as the Union and League, electrical wiring is carefully inspected and waste paper and other rubbish never allowed to accumulate. Thus three main fire dangers are practically eliminated.

The human element which forgets the best rules and regulations is seen as responsible for most of the University fires of last year. Fire causes were, elevator motor burned out, \$50; davenport in Martha Cook Building damaged by fireplace spark, \$48; mattress and bedding burned, \$29; two ironing boards burned in University laundry, irons left on \$15; leak in experimental boiler in engineering building, \$10; damage to shingle roof of University owned house, \$18; four awnings burned by cigarette, \$132; cigarette tossed in heap of rubbish on site of new Law School building under construction, \$84; and, strangest of all, a case of spontaneous combustion in personal clothing in the Chemistry building, with no damage done.

Approximately \$10,000 worth of printing equipment, seized several days ago when police arrested George Clarke on a charge of promoting a lottery, has been turned back to the owner.

Circuit Judge Benjamin Williams signed an order providing that police confiscate lottery tickets, punchboards and other paraphernalia, but that all other property be returned to Clarke.

The promoter paid a fine of \$775 while three employees each paid fine of \$100 last week.

Lottery Equipment Returned to Owner

Three Million Ford Contract for St. Joe

The pick-up of the Ford plant in Detroit has meant the addition of 100 men in St. Joseph to plants supplying castings and the like to that organization.

One industrial rubber plant here added about 100 men a short while ago due to contract received from Ford.

Two other St. Joseph concerns, one the Reliance Elevator Company, has received a \$3,000,000 contract from the Boston Pier Terminal for elevators, but production on this order will not begin until early summer. Another plant stands in a favorable position to secure a large contract.

In the industrial situation for St. Joseph the possibilities look brighter for late spring and early summer.

Innocents Die, Pirates Escape In Bounty Law

"A slaughter of the innocents" always results from a law placing a bounty price on the heads of outlaw species of predatory birds and animals, two recognized wild-life authorities of Washington recently declared in attacking a proposed bill before a special committee of the Virginia Senate at Richmond. The bill proposes payment of bounties for the heads of three kinds of hawks, great horned owls, foxes, weasels, otters, minks and wildcats, as a protection for game and other birds.

W. L. McAtee, director of food habits research of the U. S. Biological Survey, and Seth Gordon, president of the American Game Association, opposed the measure on the basis that it would both bankrupt the game fund and encourage the wholesale slaughter of many valuable species of hawks and owls and other birds. The harmful killers are elusive and seldom seen, so the commonly sighted and economically valuable species suffer the brunt of destruction, they said. When the heads are turned in for payment few county officials can distinguish the difference in species.

"The trend of game departments today is away from the bounty system of predatory creature control because of the fraud and the intentional or ignorant destruction it has always inspired," Mr. Gordon stated. "Even Pennsylvania, which still adheres to a centralized and carefully regulated bounty system on a few easily identified species, now conducts most of its control work through a trained staff of hunters and trappers. The death of a woodland pirate can not offset the killing of rodent—destroying or insect-eating birds."

He declared that except where a noticeable surplus of such predatory creatures exists, such control work is not nearly so important as provision of favorable natural food and shelter for game birds. Game department funds, out of which such bounties would come, can be better spent if used to make game birds able to take care of themselves.

Officers elected by the Saranac Ladies Literary club are: President, Mrs. Nora Hartwell; first vice president, Mrs. Escellie Scheid; second vice president, Mrs. Helen Adgate; secretary, Mrs. Thelma Poole; treasurer, Mrs. Kitty Branson.

Officers elected by the Saranac Woman's club are: President, Mrs. Eva Barber; first vice president, Mrs. Caroline Page; second vice president, Mrs. Bertha Chase; secretary, Mrs. Geraldine Goodell; treasurer, Mrs. Blanche Thompson.

THE GLOBE CO., Hayfield, Minnesota

PSYLLIUM SEED. Triple cleaned; extra sifted; Blonde (white); superior grade better than black; highly mucilaginous. Natural laxative supplying bulk and lubrication. Promotes normal intestinal elimination without ill effects. Safe, effective; non-habit forming; easy to take. A non-drug remedy. Sixty cents pound. Five pounds, \$2.50, postpaid. Hilkrest, Box 4231, Takoma Park, D. C.

LANSING POST OFFICE PLANS APPROVED

Approval has been given by the United States Treasury Department to final plans for the new post office and federal building to be erected on W. Allegan street between Townsend and Walnut street.

The building, which was designed by Bowd and Munson, with Albert Kahn Co., Inc., as consultants, is of modern classical design, and it is said is considered as one of the finest post office layouts on file at Washington. It is understood this design will be used by the government as a standard design for the construction of post office buildings in cities the size of Lansing.

The new post office will be 225 feet long and 135 feet deep, two stories and will be set back about 50 feet from Allegan street and about the same distance from Townsend and Walnut streets. It will be fireproof construction with exterior of stone, the type of which has not been decided as yet.

The lobby will be approximately 20 feet wide and has been so designed that during rush hours and particularly during the Christmas season the crowds will be more evenly distributed about the lobby and not jammed in front of one particular department. The majority of the offices on the first floor will be at the front of the building in order to provide sufficient daylight for those employees who are in these offices the greater part of their working day. At the back or south side of the lobby will be the work room of 16,000 square feet which is approximately four times the space of the work room in the present post office.

On the second floor, which will be reached by stairs at each end of the building towards the front, will be located the lockers and showers for postal employees and federal department offices.

Tunnel Assessment Cut

Reduction of \$2,000,000 in the Canadian valuation of the Detroit-Windsor Tunnel has been ordered by Judge J. J. Coughlin of Essex county, Ontario. After a two weeks' hearing Judge Coughlin set the assessment at \$1,890,000.

KC BAKING POWDER

It's double acting 25c

SAME PRICE for over 40 years 25c

MILLIONS OF POUNDS USED BY OUR GOVERNMENT

Stronger than He Was at Twenty

FIFTY-FIVE years old, and still going strong!

Do you want the secret of such vitality? It isn't what you eat, or any tonic you take. It's something anyone can do—something you can start today and see results in a week! All you do is give your vital organs the right stimulant.

A famous doctor discovered the way to stimulate a sluggish system to new energy. It brings fresh vigor to every organ. Being a physician's prescription, it's quite harmless. Tell your druggist you want a bottle of Dr. Caldwell's syrup pepsin. Get the benefit of its fresh laxative herbs, active senna, and that pure pepsin. Get that lazy liver to work, those stagnant bowels into action. Get rid of waste matter that is slow

poison so long as it is permitted to remain in the system.

The new energy men and women feel before one bottle of Dr. Caldwell's syrup pepsin has been used up is proof of how much the system needs this help.

Get a bottle of this delicious syrup and let it end that constant worry about the condition of the bowels. Spare the children those bilious days that make them miserable. Save your household from the use of cathartics which lead to chronic constipation. And guard against auto-intoxication as you grow older.

Dr. Caldwell's syrup pepsin is such a well known preparation you can get it wherever drugs are sold and it isn't expensive.

"SICK HEADACHE?"

IT is not necessary to give-in to headaches. It is just a bit old-fashioned! The modern woman who feels a headache coming on at any time, takes some tablets of Bayer Aspirin and heads it off.

Keep Bayer Aspirin handy, and keep your engagements. Headaches, systemic pains, come at inconvenient times. So do colds. You can end them before they're fairly started if you'll only remember this handy, harmless form of relief. Carry it in your purse and insure your comfort while shopping; your evening's pleasure at the theatre. Those little nagging aches that bring a case of "nerves" by day are ended in a jiffy. Pains that once kept people home are forgotten half an hour after taking Bayer Aspirin! You'll find these tablets always help. If

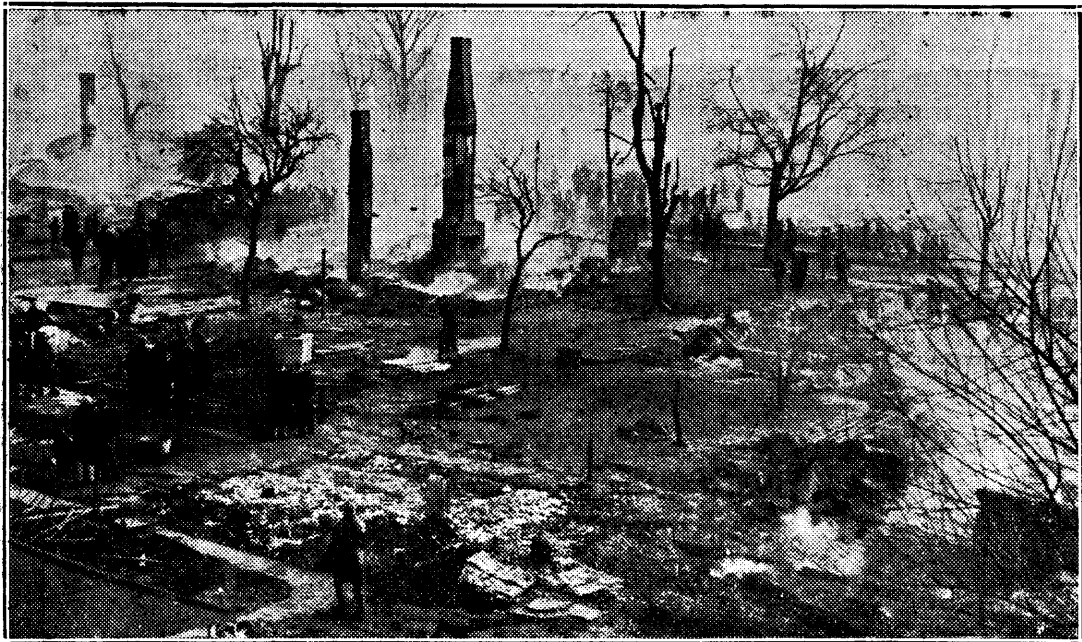

you get real aspirin, you'll get real relief. In every package of genuine Bayer tablets are proven directions which cover headaches, colds, sore throat, toothache, neuralgia, neuritis, sciatica, rheumatism, etc.

The tablets stamped Bayer won't fail you, and can't harm you. They don't depress the heart. They don't upset the stomach. So take them whenever you need them, and take enough to end the pain.

CAMERA NEWS

New Jersey Town Almost Destroyed By Raging Fire

This shows some of the great damage done by a huge fire which swept away eight blocks in the heart of Penns Grove, N. J., destroying 75 structures and leaving hundreds homeless. Driven by a high wind, the flames defied 500 firemen from surrounding cities for six hours.

Patriotic Japanese Women Volunteer for War Work

Apily demonstrating the wave of patriotism that swept Japan during the struggle with China is this picture, showing a line of Japanese women outside a government building in Tokyo, prepared to volunteer for war work in the city. The militarists won a sweeping political victory because of this national feeling.

Col. Lindbergh's Son and Wife

Charles Augustus Lindbergh, Jr., the famous baby for whom the police of New Jersey, New York and Pennsylvania began to comb surrounding territory within 10 minutes after the alarm of his kidnapping at Hopewell, N. J., is pictured with his mother, the former Anne Morrow, a few weeks after his birth.

New York's Governor at Home

Governor Franklin D. Roosevelt of New York, possible Democratic presidential candidate, is pictured at his home in Hyde Park, N. Y., with his shepherd dog "Major," enjoying a few minutes of relaxation away from the cares of the Empire State.

Wants Arts Dept.

Richard Crooks, American tenor, announced the opening in New York of a national movement for the creation of a new Federal Department of Fine Arts. He declared that the government owed much to its musicians, and "should do as much for them as it does for its pigs."

Polka Dots

Illustrating the return of polka dots to the fashion limelight is this intriguing spring coat recently exhibited in New York. It is characterized by an unusual diagonal pattern in navy blue wool, with buttons on the diagonal and a touch of white dotted silk at neck and belt.

ASK PEACH GROWER TEST NEW VARIETY

Those peach growers who have been looking for a variety of the fruit which is earlier than Elberta and which has the qualities which will make a good market peach are advised by the department of horticulture at Michigan State College to try limited plantings of a new variety, the Halehaven.

This variety is the result of a cross between the Hale and the South Haven. The crossing and the subsequent testing of the variety were done at the South Haven sub-station, where crops of fruit have been harvested from trees budded with this variety for several years.

Halehaven peaches ripen at the same time as South Haven but the fruit is much higher colored and the color appears while the peach is still firm. The skin of this peach is tough enough so that it should be a good shipper, and the pit is entirely free.

The behaviour of peach trees when grown under all conditions of soil and weather can not be exactly predicted, so the department of horticulture advises that Michigan orchard owners try the variety on a limited scale at first, and then make as extensive use of the variety as the results warrant.

Farmers Hunting Exchange Solves Outdoor Problem

Within the next five years the American farmer as a matter of protection for himself may be forced to make one of several moves to solve the problem of trespassing and unrestricted hunting on his lands, says the Izaak Walton League of America in a recent conservation bulletin. This bulletin, now being distributed to Walton chapters throughout the United States and certain groups of landowners, outlines the details of the new and successful farmer-sportsman partnerships for controlling trespass and raising more game birds. The plan for this was drawn by the Conservation Department of the League. In it the League sounds the warning that sportsmen must co-operate with landowners in the production of game birds and the control of trespass if the sport of upland game shooting is to be preserved and if farm lands are to be kept open for controlled hunters.

The Walton organization calls attention to the successful operation of hunting exchanges in several states where farmers and sportsmen have gotten together to eliminate the pothunter and trespasser, to grow more game birds by co-operation and at the same time permit a sensible amount of controlled hunting on farmlands, so that seed stock is always left on the land.

These so-called hunting exchanges which have been either sponsored by the League or organized in co-operation with the organization, have proven a marked success in Michigan and other states. According to the Conservation Department of the Walton organization more are being organized as Waltonians everywhere, are being urged to co-operate with landowners in these projects which are directed by the farmers and not by the sportsmen.

The League members help the farmers post their lands, assist in planting suitable cover and food crops for the pheasants and quail, help secure breeding stock for the farmers and in other ways lend their aid to a program of game-bird production and limited hunting.

Trees Are Frozen To Study Disease

Freezing apple trees is one of the most recent developments of the United States department of agriculture in its study of plant behavior.

Apple-disease specialists of the department studying the connection between low temperatures and perennial canker have frozen limbs of trees to very low temperatures, using a device made especially for that purpose.

The freezing apparatus consisted of an insulated box which was fitted around a limb. Freezing was brought about by using snow and salt in a mixture in the box and also by using solid carbon dioxide.

Temperatures as low as 40 degrees below zero was reached. The freezings were made at the beginning, middle and end of the winter.

These studies provide a unique method of studying the effect of cold on fruit trees. It is very significant that low temperatures in November or March caused much more killing than in January. The most significant discovery in the experiment was that fresh pruning wounds are very susceptible to cold injury. Canker follows cold injury. It is important, therefore, in perennial canker control that pruning be delayed until the danger of low temperatures is past.

Right at That

"Where do you live?" the reporter asked the young bride couple.

"At the Old anse," replied the bride.

And so the newspaper said: "Mr. Hardup and his bride, the former Miss Williams, have returned from their honeymoon. They will live with the Bride's father."

Hearings to Consider Status of Four Plant Quarantines

Four public hearings to consider the status and possible discontinuance of four important Federal domestic plant quarantines, those on the European corn borer, the Japanese beetle, the white pine blister rust and narcissus bulbs, will be held at Washington, D. C., March 24 to 28, upon order of Secretary Hyde, it is announced by the U. S. Department of Agriculture. The hearings will also consider the present value, need, and effectiveness of the quarantines.

"We are holding hearings on these plant quarantines to determine the public sentiment about them. This is in line with the department policy to consider any changes in conditions which may have taken place since their establishment."

"What we propose to find out in these hearings is just how much benefit results from our efforts and if the cost is justified. Any person or group interested in the possible revocation of these quarantines may appear at the conferences and be heard, either in person, or by attorney."

"The conferences will consider whether or not the investigation of control methods, parasites, and resistant varieties has reached the stage where Federal quarantines on interstate movement of plants should be removed; whether the spread of the diseases and pests has been so wide as to make further Federal control undesirable and inexpedient; and whether the States which are threatened by these pests and diseases are able to fight them as efficiently and economically as the Federal authorities can do it."

The conferences are scheduled to meet in the auditorium of the National Museum at 10 o'clock each morning of Thursday, Friday, Saturday, and Monday, March 24, 25, 26 and 28.

The March 24 hearing will be on the advisability of revoking the European corn borer quarantine, now effective in 13 States—Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Ohio, Michigan, Indiana, and West Virginia.

In the Japanese beetle hearing March 25, the conference will consider especially whether the advantages of the quarantine restrictions justify the costs of the administration and the expense to the shippers in complying with them. The Japanese beetle quarantine is now effective in Pennsylvania, New Jersey, New York, Delaware, Connecticut, Massachusetts, Rhode Island, District of Columbia, Virginia and Maryland. Although there is no quarantine in Ohio and South Carolina, the beetle was discovered in those States last year.

The March 26 hearing will consider the quarantine on the white pine blister rust. The disease was discovered last year in Iowa, Maryland, Ohio, Virginia, and West Virginia. If deemed necessary the quarantine may be extended to these five States and also to Delaware and the District of Columbia, both of which are surrounded by infested territory. White pine blister rust has existed heretofore in parts of Connecticut, Idaho, Maine, Massachusetts, Michigan, Minnesota, Montana, New Hampshire, New Jersey, New York, Oregon, Pennsylvania, Rhode Island, Vermont, Washington, and Wisconsin.

The fourth hearing, March 28, will be on the quarantine and certification of narcissus bulbs for interstate movement. The narcissus quarantine covers all interstate shipments.

The States which produce a million or more narcissus bulbs a year are: California, Florida, Georgia, Illinois, Maryland, Michigan, Missouri, New Jersey, New York, Oregon, Rhode Island, North Carolina, South Carolina, Texas, Virginia, and Washington.

Mt. Clemens

Promoting Beets

Mount Clemens is energizing the beet sugar industry not only for its local factory but the state.

The problem of operating the sixteen beet-sugar plants is one of financing. J. E. Davidson, owner of the Mount Clemens plant, has offered to turn it over to any financially responsible party. He indicates it will take approximately \$125,000 to carry the operation up to the time of the processing. This money is used, principally, for seed and farm labor. If ways and means can be discovered to finance this part of the operation, through the Federal Farm Board or the Citizens Reconstruction Organization, the problem has been partly solved. If the other plant owners can be prevailed upon to co-operate in the same manner as Mr. Davidson, in the event they do not operate the plants themselves, perhaps an operating company can be organized for the entire state.

One organization of dealers has guaranteed to take the entire output of a capacity run of the sixteen plants. The growers are to be asked to take from three to five sacks each, in part payment for beets.

Co-operation between farmers, plant owners and factory labor is being urged. From past experiences, percentages can be established for raw materials, transportation, operating costs, factory labor, etc. After the sugar has been marketed, the money may be divided three ways, according to their interest and stake.

POULTRY

GROWERS LOSE MONEY BUYING POOR CHICKS

The few cents saved by poultrymen when cheap baby chicks are bought is apt to become an expensive economy after the chicks have grown to a producing age and it is found that the birds lack the characteristics which are necessary to make them profitable layers, according to the poultry department at Michigan State College.

Sellers of baby chicks are in the business for profit. They cannot maintain good breeding flocks and use good systems of flock and hatchery management and then sell their product at a low price. Egg producing characteristics are hereditary and a pullet which lacks the producing factors cannot be fed or handled in a manner which will make her profitable.

The difference in price between good chicks and mediocre ones is usually only a few cents. The feeding and care of poor chicks is just as expensive as that of better birds so the only saving made is in the original purchase price.

Well bred pullets should lay 200 eggs or more a year, but poorly bred pullets usually have production records of 100 eggs or less each year. The difference in production may be as high as 10 dozen eggs per year, and if the price is only 25 cents per dozen, the difference in returns from the two birds is \$2.50.

When any lot of chicks is placed in the brooder house, all small, weak, and deformed chicks should be taken from the lot and killed. These chicks are apt to be a continuous liability and time and feed should not be wasted on them.

TURK' COMEBACK IS DUE TO SCIENCE

Science and not the moon has helped the turkey to stage a comeback, according to H. C. Kandel, poultry specialist at Pennsylvania State college.

From 1890 to 1920, he explained, the number of turkeys in the United States decreased from 10,750,000 to 3,627,000, largely because of diseases, but chiefly because of one disease, blackhead. These heavy losses caused farmers to request poultry scientists to investigate the causes and control of turkey diseases.

Three years after the investigations began, Prof. Kandel said, methods were perfected so 85 to 90 per cent of a hatch could be raised, compared with from 30 to 70 per cent before the scientists began their studies.

"Our experimenters," he said, "decided to grow the turkeys as they would chickens, except to include more protein in the feeds. The poultlets were placed in the pens but they would not eat. Then chicks were put into the pens to show the poultlets how to eat; the poultlets tossed the chicks out of the pen and then ate the mash and grain as they should. In addition to the regular chick mash liquid milk was available to supply additional protein. Finely cut green feed was always available."

"The amount of milk the poultlets used was measured daily and weekly. It was found the poultlets used more protein than did chicks the first eight weeks; from nine to sixteen weeks they used less than the first eight weeks, and from seventeen to twenty four weeks they used still less."

"The next year the liquid milk was left out of the ration and fish meal, meat scrap and dried milk were increased to furnish the same amounts of protein the poultlets needed the first year. Five different groups were fed different rations for various periods and from these experiments came the recommendation to feed a mash approaching 24 per cent protein for the first eight weeks, 20 per cent for the ninth to sixteen weeks and 16 per cent protein after the sixteenth week."

"In these experiments the mortality was 7 per cent from hatching time to maturity for the first year and 12 per cent the second. The lots that were fed a low-protein ration lost from 19 to 47 per cent of the poultlets. The cheapest gains were made in the earlier weeks and, on the whole, the turkeys took from four to five pounds of feed to make one pound of gain. The low-protein rations were not satisfactory either in growth or cost and the high-protein feed was found most necessary in the earlier weeks and it saved money to change the ration in the three different periods."

"The poultlets in these experiments were grown in confinement quite similar to that of chicks. Shavings were used as litter and were found satisfactory."

XHomeLike

The burglar had entered the house as quietly as possible, but his shoes made a certain amount of noise. Suddenly he stiffened. He heard a woman's voice.

"If you don't take off your shoes when you come into this house there's going to be trouble. It's been raining for three hours, and you've dared to tramp on my carpet. Go downstairs and take off your shoes at once!"

The burglar crept downstairs and out of the house without a word. His confederate who kept watch outside noticed a tear in his eye.

"I haven't the heart to rob that place, Tom," murmured the burglar, "it's so like home!"

Soldier's Wife True to Her Duty as "Muzzler"

The late General Edwards, leader of the Twenty-sixth division, died with General Butler in the gentle art of "speaking out of turn." Edwards, when still a lieutenant, was once banished to the farthest outpost for his indiscreet remarks when Senator Calvin Brice tripped and fell from a stage into a row of decorative plants.

But marriage put an end to this failing, for Mrs. Edwards was an ever-present and astute councilor. On one occasion, after the general had given a lengthy interview to a reporter, Mrs. Edwards demanded bluntly: "Have you received permission from the War department to give out this interview?"

"Why, no," stammered Edwards, blushing like a boy who had been caught stealing jam.

"I'm sorry," said Mrs. Edwards, turning to the reporter, "but you must hold up that story until the War department has okayed it. You see," she added with a smile, "it is the duty of the enemy to muzzle my husband's guns if he is able to do so. It is my duty to muzzle his tongue until the War department allows him to commence firing."—Los Angeles Times.

Paper Currency Today

Mere Promises to Pay

Paper money may be looked upon as token money carried to its final extreme. A piece of it has no value at all in itself; the value depends wholly on a promise printed on it. But although the idea of paper money might be expected to have developed easily from token money, no one in the West seems to have considered the matter feasible until more than a thousand years after token coins and

pearson, says a bulletin of the National Geographic society.

Paradoxically, the first "paper" money was a brick, for the germ of the idea seems to have been born in Babylonia more than 2,000 years before the Christian era. Bonds for the repayment of loans were written on clay tablets and baked. These passed from hand to hand as representations of the amounts involved. Similarly deposits were made with individuals, and clay-brick drafts were written against them. Later brick

coins of exchange transferred wealth from place to place.

What He Had Feared

Do you know what a malingeringer is? No? Maybe that's what you are. In a general sense, a malingeringer is a person who feigns sickness in order to avoid having to do any work.

A Kansas City physician was called to the jail the other day to examine a prisoner, who was reported ill. The jailer, a bluff, hearty Irishman watched

the examination with almost professional interest.

"What's the matter with him, Doc?" he asked, when the examination was completed.

"Oh, he looks to me like a malingeringer," the physician said.

"Just what I was thinking," the jailer ejaculated. "I knew right along that prisoner had some terrible disease!"—Kansas City Star.

WEEK OF MARCH 27

The opening days of the last week of March in most parts of Michigan are expected to be generally fair with the temperatures considerably below the seasonal normal. This means that readings of the thermometer will reach a minimum several degrees below freezing during Sunday and Monday.

Temperatures will be close to the normal about Tuesday as a result of a low pressure area moving eastward over the state during the middle part of the week. We expect a moderately marked rise in the temperature during the 48 hours centering on Wednesday, and believe there will be marked storm activity throughout many parts of the state before the end of the week.

During Wednesday and Thursday there will be high winds and gales with showers and probably some sleet. By Friday or Saturday the winds will be veering to the west and northwest, followed immediately with a marked fall in the temperature to more low readings for the season and some snowfall.

Heavy Rains Feed Sea Gulls

Rains in the interior and southern part of Tunisia, North Africa, have added a new dish to the flocks of sea gulls flying along the southern Mediterranean coast. The country of Tunisia, bordering on the northern part of the Sahara desert, has been beset with severe storms since the beginning of the year; rainfall has been heavy. In fact, it is estimated there will be 300,000 less acres of wheat harvested in Tunisia as a result of damaging storms. The rains have flooded the land, not only destroying crops but ruining the homes of thousands of poisonous snakes. To escape, these vipers have traveled northward across the land toward the coast. They have become such a plague that it has been necessary for French colonial troops to fight them. Aiding them in this work are the graceful seagulls, who find these dangerous reptiles a choice delicacy. The rains may have destroyed the hopes of many farmers of this region, but it filled the stomachs of hungry birds.

Why Your Car Runs Better at Night

Thousands of motorists have experienced the sensation of having their cars run better at night than during the day, and have wondered accordingly if the car really operated better or if it was only a hallucination. This question was put recently to Oldsmobile engineers and they assure motorists that improved car performance at night often is a fact and they explain the reasons why this is so.

"A noticeable improvement in car performance at night usually occurs when the day has been hot or sultry and there is a material drop in temperature at night," explain the Oldsmobile engineers. "This improvement is due to the change in atmospheric conditions.

"An internal combustion engine gives better performance when the gas mixture is under high compression—that is, providing the compression has not been raised to a point where detonation will occur. The denser, or more compressed the gas charge is the greater expansion it will have when it is fired.

"Air naturally becomes heavier and more dense when cold, expanding when hot. At 70 degrees temperature a pound of air will occupy 13.4 cubic feet of space, while at 32 degrees it will only occupy 12.4 feet. Therefore, a larger and heavier charge of gas mixture can be drawn into an engine cylinder when the air is cool.

"Another contributing cause of improved engine performance at night is that night air usually is damper than during the day, and the thin particles of moisture contained in it slightly slows the rate at which the fuel burns.

"In designing the 1932 Oldsmobile Six and Straight Eight, we have increased the compression ratio so that owners obtain this improved performance under any atmospheric condition."

Dinner Stories

This Wasn't Bridge

"Deacon White," asked Parson Jackson softly, "will you lead us in prayer?" There was no answer.

"Deacon White" (this time a little louder), "will you lead?"

Still no response. Evidently the deacon was slumbering. Parson Jackson made a third appeal and raised his voice to a high pitch that succeeded in rousing the drowsy man. "Deacon White, will you lead?"

The deacon in bewilderment rubbed his heavy eyes and announced: "Lead yourself—I just dealt."

Adds p Cent

A new five and ten-cent store had been opened by a man named Cohen. A customer came in one day and selected a toy for which she handed the proprietor a dime.

"Excuse lady," said Cohen, "but these toys are 15 cents.

"But I thought this was a five and ten-cent store."

"Well, I leave it to you how much it is, 5 and 10 cents."

MAD LAUGHTER

A THRILLING MYSTERY STORY + by MILES BURTON

"Yes, I know. I was nearly suffocated myself. You forget those infernal refuse tips. They've been burning for years and they must generate an enormous quantity of carbon dioxide. I don't know, for I haven't tried the experiment, but I should think that if you chose a suitable spot on one of those tips, and threw a man into it, he'd be suffocated soon enough. It sounds pretty horrible, but horrors don't seem to deter these particular ruffians. Once he was dead, the rest would be easy. All they would have to do would be to put him in the packing case, drive the lorry up to the cottage, and pick it up. They would naturally approach London from the west, in order to cover their traces."

"Ingenious, I admit," commented Sir Edric. "To think that, just before you came in, I was bewailing our lack of imagination! But, you know, Brooks' body showed no traces of his having been bound or gagged."

Dick waved this objection aside with an airy gesture. "A mere detail!" he exclaimed. "Mind, I don't maintain that this is what actually happened. I'm only offering suggestions. And, now I come to think of it, I don't know that they can carry us much further. But I do believe that if you can trace that motor-boat, you will have found a clue."

"Well, we want one pretty badly," Sir Edric admitted. "I only hope it will not prove as barren as the ones we already have. We have been able to discover nothing about the lorry and we don't seem to be able to learn anything about the case. It has been just the same with all the previous crimes in which we suspect the Funny Toff to have had a hand. He leaves nothing lying about which could possibly incriminate himself or his agents."

"Surely the diamonds, when he begins to dispose of them, will give him, or at all events his agents, away?" suggested Dick.

"I'm not so sure," replied Sir Edric. "You see, receiving and disposing of stolen goods is a trade, like everything else. As long as a receiver, fence, we call him, is in a small way of business, we have a chance. In order to live, he is bound to dispose of his stuff at once, and through the ordinary recognized channels. But, if a man was carrying on the trade on an extensive scale, he could afford to keep well known stones, like those composing the necklace, up his sleeve for as long as it suited him. He could send agents, each with a few stones, all over the world. There are plenty of places where an odd stone or two could be disposed of, without awkward questions being asked. At the worst, he could re-cut the stones, and so alter their appearance."

"And you believe that the Funny Toff is a fence on this extensive scale?" asked Dick.

"I do," replied Sir Edric. "We've heard whispers of him more than once when there has been a big burglary. And it's a curious fact that, although big robberies are on the increase, the amount of stuff handled by the ordinary small fences has decreased enormously. It all points to one firm having, so to speak, made a corner in stolen property. And I'm convinced that that man is the Funny Toff."

"Who merely runs this murder business as a sort of sideline," commented Dick. "Well, if I am to lend you my brains, I'd better be told everything there is to know. I've got an idea at the back of my head, Conway. What became of the packing case in which Brooks' body arrived?"

"I've got it locked away downstairs," replied Sir Edric. "Would you like to see it?"

"Yes, but, if possible, not under the disapproving eye of Inspector Pollard," said Dick. "Pollard, I am quite sure, regards me as an interloper, and he doesn't share your flattering estimate of my brain-power."

"We'll go and have a look at it together, without disturbing Pollard," replied Sir Edric. "He's a better man than you think; give him an idea and he'll follow it out through thick and thin. But his conception of a criminal is a fellow with rubber soles and a handkerchief round his neck. He lacks imagination, and I believe he's rather proud of that fact. Come along."

CHAPTER XXIV

Sir Edric led the way to the ground floor, where he unlocked a door, which he closed behind them. The packing case stood on a pair of trestles, which gave it something of the appearance of a coffin. The straw had been thrown back into it, and Dick proceeded to remove it handful by handful, shaking it carefully as he did so.

"Just an ordinary machinery case," he muttered. "Made to fit a part of some gadget or other. It was put together by an engineer, rather than a carpenter. No neat joints, but a thoroughly strong and massive job. Look at the bolts for securing the lid, for instance. But there's nothing about it that I can see which gives any clue to its origin."

He had removed all the straw by now, and was bending over the case, his head and shoulders buried in it.

"No, there's no mark of any kind inside it," he said, with an air of disappointment. "I'm afraid it's no use, Conway. Anyhow, I've wasted enough of your time this morning. I'll get back home and have a think, and if anything comes of it, I'll let you know."

He left his friend rather abruptly and took a taxi back to his rooms. Once safely there, he put his hand in his pocket and withdrew a minute clod of dried mud which, from its shape, had evidently fallen from a boot. This he looked at with considerable satisfaction. It was almost certain that the boot had belonged to Inspector Brooks, and it was in the hope of finding something of the kind that he had examined the case.

For Dick, although very few of his friends suspected it, had many scientific interests, among which was a penchant for geology, and the constitution of soils. His idea now was, that

to dissolve, leaving behind it a tiny globe of molten metal, which soon cooled and assumed a dull grey color.

"I thought so," remarked Tennant. "That's galena, lead sulphide, the commonest ore or lead. Do you want a quantitative analysis? You'll have to bring me some more of the sample if you want an accurate result."

"I haven't got any more just now," replied Dick. "I haven't really gone into the matter yet. What part of England do you suppose this comes from?"

Tennant shrugged his shoulders. "I really couldn't say," he replied. "Galena is pretty widely distributed, as you know. It occurs in the limestone of Cumberland, Derbyshire and the Mendips, and, mixed with clay, in Cornwall. Small quantities are found in many other places, but those are its principal sources."

Dick thanked him, and after some further conversation he took his leave

"You won't be tempted to play Sherlock Holmes any more."

he might find traces of Essex mud or clay, and so confirm his theory that Brooks had met his death in the neighborhood of Rainham. He took the clod between his fingers and crumbled it on to a sheet of white paper. Then, spreading it out, he examined it very carefully through a powerful glass.

As he did so his face assumed an expression of disappointment. The fragments beneath his eyes showed no trace of clayey mud. They consisted, almost entirely of fragments of limestone, such as might have accumulated on any country road. But they had one rather uncommon characteristic. The larger fragment showed a distinct bluish-grey tinge.

"Mountain limestone," he muttered. "Found in a good many places in England, and used extensively for road-metal. That doesn't help us much. Hullo, here's something different!"

With the point of a needle he isolated one of the fragments, and looked at it long and earnestly, through the lens.

"Well, I'll be —!" he exclaimed at last. "How the deuce did that get there?"

Dick sorted the fragments very carefully, and picked out several similar to the one which had excited his astonishment. These he placed in a pill box, which he wrapped up in paper. Then he went and walked round the corner to the Geological Museum in Jernyn Street, where he asked for an acquaintance of his, whom he knew to be an expert in the identification of minerals.

He was shown into this Mr. Tennant's room, and the two men shook hands cordially. Dick explained that he wished for an opinion upon some samples which he had brought, and produced the pill box for Tennant's inspection.

"Hullo!" remarked the latter, as he looked at the fragments through his lens. "Are you thinking of interesting yourself in a lead mine? I think I can identify this stuff at a glance, but I'll just test it, to make sure."

He placed one of the fragments upon a piece of charcoal, and sprinkled it with a pinch of white powder. Then he directed the flame of a blow-pipe upon it. The fragment appeared

and returned to his rooms. Tennant had merely confirmed what he himself had suspected. The fragments were galena. But how on earth did they come to be adhering to Inspector Brooks' boots? However widely galena was distributed, it certainly was not found in the Essex marshes, nor did it seem a likely constituent of the rubbish of the refuse tips. It seemed that he would have to abandon his theory as to the place of the Inspector's death.

What was the alternative? Where could Brooks have been, to have collected fragments of galena on his boots? The principal sources of the minerals were Cumberland, Derbyshire, the Mendips and Cornwall, Tennant had said. Any of these localities was therefore possible. In the first three it occurred in conjunction with limestone, in the fourth with clay. But the clod of dried mud had contained fragments of limestone and no trace of clay. That seemed to point to one of the first three.

Dick took out a map of England and laid it on the table before him. If the lorry conveying the Inspector's body had started from Cumberland or Derbyshire, it would naturally have approached London from the north or northwest, and a considerable detour would have been necessary for it to pass anywhere near Brentbridge. On the other hand, the obvious route from the Mendips would be by Bath or old Exeter roads, which converged not far from Brentbridge. On the whole, Dick thought, the lorry driver would have preferred to make no unnecessary detours with such a questionable load on board. There was no reason for the selection of Brentbridge as the place near which to throw the case off. Any fairly secluded spot in the neighborhood of London would have suited his purpose. On the whole, it seemed most likely that he started from some district in the west or southwest.

This pointed to the Mendips. Dick knew that at one time lead had been extensively worked in this district, but that the mines had long since been abandoned, since the ore was no longer found in sufficient quantities to make its extraction worth while. Again, the peculiar bluish-grey color

of the limestone fragments was characteristic of the Mendips mountain limestone. Was it possible that Brooks had been murdered in some lonely spot among the deserted moorlands of the Mendip hills?

CHAPTER XXV

Dick lay back in his chair and closed his eyes. Fleeting pictures of the Mendips passed through his mind; the wide stretches of uncultivated moor, Cheddar Gorge, the fish in the Blagdon Reservoir, the neglected ruins where the lead mines had once stood. Plenty of space here to commit a murder, far from any human dwelling place. But why select a spot so far from London?

Of course, his deduction might be all wrong. He found himself wondering what the matter-of-fact Pollard would say if he told him that, from a fragment of mud found in a packing case, he had inferred that Inspector Brooks had been murdered in the Mendips. No, that would never do. Imagination was all very well, but even Conway would smile and suggest that this was carrying it too far. On the other hand, he felt convinced that he was on the right track. In an instant his mind was made up. He would go and spy out the land himself before he propounded his new theory at Scotland Yard.

He had an appointment to dine and dance with Alison that evening, and he resolved to tell her his plans as soon as he met her. But, as it happened, she, too, had an announcement to make. "Father is going back to Lestrige Hall the day after tomorrow," she said. "And he's asked me to go with him. You know that I shall hate leaving London, Dick dear, but I must go. Father's very fond of me, and he suggested rather pathetically that he won't see much of me once we're married. Of course I said I'd go. You do understand, don't you?"

"Of course I understand, darling, but don't be away too long," replied Dick.

"If I am away more than a week or two, you must come and stay with us," said Alison. "You've never been to Lestrige Hall, and it's an awfully jolly place. You can manage a day or two of quite decent hunting. It would do you good, you're getting lazy."

"I believe you're right," replied Dick. "As a matter of fact, I've been thinking of going down to a little pub I know of in Somersetshire and having a day with the Mendip pack."

"It wouldn't do you any harm," she replied brightly. "It would keep you from brooding over my absence. Besides, it'll keep you out of mischief. You won't be tempted to play Sherlock Holmes any more. What is the address of your pub in case I should feel disposed to write to you?"

"The Anchor and Hope Inn, Priddy, near Wells," said Dick. "It's not a bad little place, if you don't mind isolation and plain food. I might be there a week, if it's decent hunting weather."

So it was arranged, and on the following morning early Dick started off alone in his car. He chose the Bath road, and sped over its broad and somewhat uninteresting surface as far as Beckhampton. Here he turned to the left and went on through Devizes and Trowbridge to Frome, where he lunched at the George. From there, after consulting his map, he took the old turnpike road, which climbs steadily, avoiding most of the villages which cling to the slopes of the rising ground, until it reaches the summit of the eastern Mendips at Masbury.

Here he stopped the car and again consulted his map. He was still five or six miles from his destination, but this was an admirable spot from which to survey the surrounding country. The road ran along a ridge from which an extensive panorama stretched out in either direction. On the one side was the line of the Quantocks, with the loom of Exmoor on the far horizon, and Glastonbury Tor sharply defined in the foreground. On the other was an undulating country, shadowed in the distance by the smoke of Bristol. And in front of him, a bare and rugged skyline, was the borderland of the eastern Mendips.

He had chosen the Anchor and Hope, which he had visited years before, as being more or less in the center of the disused lead mines. Also he knew that the landlord kept one or two reliable hacks, which he hired to those who enjoyed a gallop with the Mendip hounds. Settled there, with a horse to ride, he could assume the guise of a London sportsman, with no object in view but to stir his sluggish liver. He folded up his map, started the car again and proceeded by a series of lanes, running straight and deserted between low stone walls, to the crossroads at which stood the Anchor and Hope.

The inn had once, when the mines were at the height of their prosperity, been a hostelry of considerable importance. The village of Priddy, lonely and decaying round its wide green, lay rather more than a mile away, and the inn stood, gaunt and bare, the only house within sight. It was hard to believe that this had once been the center of a thriving industrial district. Nothing remained of its former activity but a few grass-grown spoil heaps and, here and there, the tumbled ruins of a pit-head or a smelting furnace. A great solitude which seemed the more melancholy in the fading light of the short afternoon.

A strange face greeted Dick as he entered the inn. The place had changed hands since Dick had last visited it. He was rather glad of this, since he had no wish to be recognized.

He asked for a cup of tea, and, while it was being prepared he got into conversation with the landlord. He learned that a couple of homes were still kept, and then, as though the idea had only just occurred to him, asked if he could stop for a few nights and hire one.

The landlord was delighted. "I'll put you up with pleasure, sir," he said. "I often has a gentleman like you here for the hunting. But I'm afraid you'll find it a bit rough, sir. We don't exactly go in for the hotel business up here. And I shall have to see the missus about getting some grub in."

"Oh, that's all right, I'm not particular," replied Dick easily. "If any food is wanted, I'll run you into Wells in the car. After tea, I shall have to send a wire to tell my people where I'm staying. What about having a look at those horses of yours?"

That evening Dick spent in the bar parlor, listening to the talk of the three or four men who dropped in from the neighboring farms. Their conversation was mainly concerned with agricultural matters, the prospects for the roots, the price of milk, the inquiry of the pig buyers. The oracle to whom every doubtful point was referred was a fine looking old man, tall and spare, with a patriarchal white beard. Dick gradually edged his way into the conversation, and was at last rewarded by establishing direct contact with the ancient.

(To be continued)

Visiting Nurse: "And do your children use a toothbrush regularly?"

Fond Parent: "Do they, mum. First thing when they get up in the morning, it's a race to see which one can get to the toothbrush first!"

Doan's Pills A DIURETIC FOR THE KIDNEYS

ALL CHILDREN
"PROBLEM CHILDREN"

The perfectly good boy or girl, who never does anything wrong, or never even wants to do so, probably does not exist, and would be a freak if he did, concludes Professor Willard C. Olson, director of research and child development in the University of Michigan.

From a close study of behavior histories and characteristics of 3,000 children taken at random, he concludes that all are "problem children" in varying degrees, from those very badly adjusted to the world around them to those exceptionally well adjusted. The great majority lie between the extremes, the "average" boys and girls who come into conflict with the rules of adult society once in a while, but not often enough to permanently bend their lives in the wrong way.

Children whose conduct in school, playground or home is frequently bad, who regularly have trouble adjusting themselves to the accepted behavior, also usually do less well in school work than those well adjusted. Prof. Olson finds, even when the general mental ability is up to average. The bad boy who becomes a bad man frequently does not lack enough mental ability to get along as well as the average, but he does have some lack or twist in his emotional nature which makes it hard to judge between right and wrong, simply because his feelings about doing certain things are different in greater or lesser degree from those of most persons.

All children, and boys more than girls, show some tendencies of an unsocial sort at one time or another, but most of them are easily led into the accepted adult ways of behavior because their emotional make-up though never identical, is very similar. Their problems are usually solved by home and school. With these who differ markedly from the normal, however, special attention must be given to recognize them very early and direct them with special care into the ways society requires. If left too long they never realize their true place in life and become the misfits, wanderers and out and out rebels against law and order, says Prof. Olson. Because he believes future behavior can be as a rule predicted from present and past actions, he urges that childhood be carefully studied and recorded, and intensive work of this nature is now under way at Michigan.

Women to Furnish Olivet Hall Rooms

The Women's auxiliary board of Olivet college has assumed the expense of furnishing three rooms in the new residence hall for women that now is in the process of construction. The rooms taken over as a project include the women's board room, one of the parlors off from the main drawing room on the first floor at an expense of \$515, and \$500 toward the furnishing of the library reading room on the second floor. The last named will be known as the Stowell library in honor of Mrs. C. B. Stowell, Hudson, a former member of the board. The amount pledged toward the furnishings was a gift to the board last year from Mrs. Grace Winckler Elyria, O., in memory of her aunt, Mrs. Stowell.

Student Council To Be Revamped

Reconsideration of their recent resignations by members of Central State Teachers college Student council appears certain to result in a drastic reconstruction of the legislative body. President Edward James Killoran and the present council members are planning to submit to the college at large a new constitution which will call for membership on the part of the four class presidents, heads of all campus organizations and several members-at-large to represent the nonorganized. All council members will be students, Killoran expects that if the new plan meets with general favor it can be adopted by the early part of the spring term.

Best Charlotte Seniors Chosen

Miss Genevieve Huber and Gary Marsh have been chosen as the best all-around seniors in Charlotte High school, from the viewpoint of scholarship, athletics and leadership. These two will be honored by having their names inscribed upon the honor student plaque which was presented to the high school by the University of Michigan club of Charlotte two years ago.

Mrs. C. M. McLean Heads Holland Literary Club

The Woman's Literary club at its annual business session elected the following officers: President, Mrs. C. M. McLean; vice presidents, Mrs. J. D. French, Mrs. George E. Kollen; recording secretary, Mrs. Charles K. Van Duren; corresponding secretary, Mrs. John J. Good; treasurer, Mrs. Thomas Marsilje; directors, Mrs. J. H. Den Herder, Mrs. O. S. Cross, Mrs. R. Schlecht.

Evening Gowns Vary Their Lines

The gown at left is in sheer crepe fabric, with a cape-scarf crossed and attached in front, and a seamed skirt. Black crepe makes the dinner gown at the right, which has a fanlike section in front, from which develops the twisted girdle, one side of which is pink and the other blue.

Speaking of Style

By IRENE VAIL

All sports wear collections lean heavily to jersey and to knitted things this season. Cotton sports togs are something to look forward to, but are, for the moment, eclipsed by the other kinds. Women seem devoted to wools, so much so, in fact, that crepes are nothing like as much worn as formerly. There is, however, interest in rough crepes, and, of course, an inclination to combine rough with smooth fabrics—another contrast being so gained.

That crochet and knit effects are in fashion is also apparent. Velvety knit things are one of the best liked varieties. There are lacy sweaters and very fine hand-made looking ones in crochet stitch. One has still another alternative, sweaters. They may be worn not only under the skirt or over in the usual manner, but may have a rippled peplum, which, you must admit, is new.

Sweater sleeves are any length—just over the shoulder, half way to the elbow, or wrist length, in which case they may be slightly full. Everything points to a big sweater season. They are still worn as a substitute for a blouse. Necklines are either high—that is, to the throat—with or without collars or square.

With a red and white sports costume one may wear a blue scarf if

the patriotic urge is strong. You must have noticed how very fashionable it is to show your colors. All the young things are doing it—and some of the older ones, as well.

All sorts of interesting fabric hats are being worn. One may roll one's own, if one likes the adjustment knitted or crocheted cap. Or one may wear real millinery, flowers, fruit and all the rest of it, not to speak of bows and of novelty quilts and ornaments.

Skirts are straighter, even when they are built higher, up and over the diaphragm. It is becoming customary to have waist and skirt contrast. The separate jacket is not so much a separate jacket as a contrasting one, linked definitely to the skirt or suit by some trimming feature, as for instance, the lapel. There is nothing to warrant the statement that the street skirt gains an inch rather than loses it. Even such houses as Chanel, Manbocher, and Jane Regney have acceded to the idea of the slightly longer skirt, and these houses are enthusiastic always over the more youthful fashions. There is a play of about two inches between Chanel's 10-inch regulation and the skirts of Maggy Rouff and Chantal, which hover between 10 and 12, often setting down to 11.

Reproving Hubby

Wife: "Did you notice the chinchilla coat on the woman sitting in front of us at church this morning?"

Husband: "Er—no. Afraid I was dozing most of the time."

Wife: "m! A lot of good the service did you."

Scotch

And then there's the story about the Scotchman who stayed away from a municipal banquet because he didn't know the meaning of the word "gratis" on the invitation. The next day he shot himself over an open dictionary in a public library.

His Majesty!

By FRANK K. GLEW

Twenty pounds of squirming gee!
Two roguish eyes that smile at me;
A rosy mouth, as red as fire,
A wrestler, who makes dad perspire!

A lunge he makes at glasses frail
Then WOW! Emits a piercing wail!
And now this shaver strives to talk,
And wouldn't he just love to walk!

His mommie hustles night and day
To serve his needs in every way;
SH... mischief fills those eyes o' blue,
There's trouble hoving into view.

He bumps his head and chews his hand
As puffingly he tries to stand.
Though loads of care and worry, too
He's sparkling as the morning dew...
A BABY BOY of precious worth,
The sweetest thing on this old earth!

Delicious and Inexpensive Dinners

Continuing the discussion of yesterday's column, let us consider two other attractive menus, the left-overs of which contribute to other delicious meals. Your market list for the first menu will include the fillets of flounder, one-fourth pound of cheese (unless you have a small amount left over from previous menus), three pounds of spinach, a four pound cabbage, three pounds of cooking or salad apples and a package of tapioca.

To prepare the fillets of flounder, cut them into individual portions for serving. Sprinkle with salt, pepper and lemon juice. Place the fillets in buttered baking pan and put one small minced onion, two tablespoons chopped celery and one tablespoon minced parsley on top. Pour a cup of boiling water into the pan and cover with buttered paper. Bake in a moderate oven for ten minutes. In a separate sauce pan melt two tablespoons butter and blend into it, two tablespoons flour, one-fourth teaspoon salt, one-eighth teaspoon pepper. Add one cup hot milk. When it comes to a boil add four tablespoons grated cheese. Pour this sauce over the fish and sprinkle with two additional tablespoons grated cheese. Bake for ten minutes longer with dish uncovered. Serve very hot from dish in which fish is baked.

If you will get an extra fillet or two you can drop them into gently boiling salted water for ten minutes, drain, cover and set in the ice box to be used for a creamed breakfast or luncheon dish the next day.

After preparing your salad you will find that most of the apples and cabbage are left over. They can be utilized for the vegetable dish and the appetizing dessert the second day. That leaves only the sweet potatoes, watercress, two pounds of mixed chopped beef and pork and a can of tomatoes to be purchased for the second day's dinner. Of course, these items may be included in the first market list. Use a part of the tomatoes for binding together the meat loaf, put the balance through a sieve and stiffen with gelatin for the salad.

Suppose that these menus are used for Friday and Saturday dinners. The Saturday market list may also include such staples as need replenishing, vegetables and a good sized chicken for the Sunday dinner. If the chicken is parboiled the stock may have rice or macaroni added to make a good soup for the first course. Then put the chicken in a roaster and brown nicely. The Sunday menu might consist of chicken and rice broth, roast chicken mashed sweet potato balls, buttered broccoli, radishes and celery hearts, vanilla ice cream, wafers and coffee.

Cook more broccoli than will be needed, drain that left over and chill for salad on Monday. The chicken that is left over may be diced and used with a cream sauce and rich baking powder biscuit as a "chicken shortcake" or used for stuffing fresh tomatoes or peppers for Monday or Tuesday dinner.

Any meat loaf left from Saturday's dinner may be sliced and served cold for Sunday's supper or Monday's luncheon.

Modes and Manners

Question: "Can you suggest something new in the way of place cards for a formal dinner which I am to give soon for a newly wedded pair? There are to be eight of us."

Answer: Such a dinner as you plan is hardly large enough to warrant the use of place cards. The hostess, entering the dining room first, can assign each to his proper seat without any trouble at all. If you prefer to use place cards, however, bear in mind that elaborate cards are considered to be in poor taste today. A simple white card on which the hostess writes the name of the guest is both practical and dignified.

Question: "Is 'R.s.v.p.' always used on invitations? I know it means, 'Reply, if you please,' but have never been able to figure out the 's.v.' Shouldn't these letters be 'i.y.' for 'if you?'"

Answer: "R.s.v.p." certainly means "Reply, if you please," when translated from the French, "Repondez, s'il vous plait," for which it is an abbreviation.

Persons who know what invitations should be answered don't require an "R.s.v.p." reminder. But these days so many of us are too busy or forgetful of the simple niceties, that the hostess often takes it upon herself to remind us, but only when the occasion demands a reply, as in the case of a dinner, luncheon, dance, bridge, or wedding breakfast.

Question: "Can you tell me why butlers always have such unusual names?"

B"

Answer: For a first name, a butler's name is unusual, of course, as the average person is inclined to regard any name which isn't prefixed by "Mr." as a first name. A butler, however, is never addressed as "Mr." by those whom he serves. Nor is he called by his first name, as that would be too familiar. So if his surname happens to be Scruggs, he is known as plain Scruggs to the household. It is the custom to address chauffeurs by their surnames in this fashion, also.

You and Your Child

By JANE HERBERT GOWARD

VOCATIONAL GUIDANCE NEEDS EXPERT

Before the world was so thoroughly industrialized, and long before our time and the time of the grandparents of many old ones living today, the question of vocational training was settled for a youngster the day he was born. If his father was a tradesman, the son or sons, knew that their place would be beside father to help him carry on during his later years and then, finally to relieve him of the burden completely. It was the same with the doctor, the lawyer, the carpenter. And even today, this tradition adheres in some families, but more among the educated and gentlemanly class, than among the vast populace making up the middle class.

Among the upper classes a son is more apt to follow in the footsteps of his father, vocationally speaking, because culturally and socially he is apt to be pretty near the top. There aren't the same reaches to aspire to that the present day child born of lowly origin has, and may hope, and often does, reach. Thus a family which for generations back has been one of lawyers or bankers with here and there, perhaps, a sprinkling of doctors, would hope to keep up the tradition. And unless the child had some other marked leaning, which would render him useless for law or banking, his position in the family would be practically parallel to the position of a son in the long ago who inherited his vocation from his father as a natural course and without any choice in the matter.

What shall my child "be" when he grows older is getting harder and harder to decide upon as time passes. To whatever field one turns is sure to be overcrowded. There are lawyers, technicians, architects, engineers, mechanics galore, and large percentages out of work. Thus even in more prosperous times than the present. Among the needleworkers, the milliners, the dressmakers, the tailors, the furriers, conditions are just as discouraging. Which way is a parent to look? How can he suggest or guide

his children, when the outlook is so discouraging?

A solution was recommended to the White House Conference by the committee on vocational guidance and child labor, headed by Anne S. Davis, who is director of the vocational guidance bureau of the Chicago Board of Education. The committee recommends that the schools provide adequate opportunities for vocational training, including try-out courses. These courses would give opportunities for elementary work in agriculture, industry, business and homemaking and at the same time provide contacts with the professions, giving each pupil a chance to find out what he would like best to do—and if he can.

There would be a group of vocational counselors in each school system, in order to aid the pupils to make a wise choice of occupation. There would be placement officers to help young workers obtain positions, whose job it would also be to follow up and supervise their employment.

In other words, it is recommended by the committee on vocational guidance that the school shall not wash its hands of a child the minute he leaves. Those children who must leave before graduation in order to help out at home, will be recommended that they pursue some course of study at night, some course which should eventually help them to attain a high degree of efficiency in their chosen calling.

As summed up by the committee, vocational education should be general. It should be interpreted also to include the adjustment of the worker to the social and economic conditions surrounding the occupation for which preparation is provided, as well as the acquisition of manipulative skills and technical knowledge required in the occupation. Life is so complex today that few, if any parents are equal to the task of properly guiding their children vocationally. It takes the expert. And these our schools should provide through national legislation and for patriotic as well as economically sound reasons.

Your Handwriting—and What It Tells

By JANET WINTON

THE GIRL FRIEND VS. THE BOY FRIEND

"Dear Janet Winton: I am sending a sample of my boy friend's handwriting to be compared with mine.

To any casual observer both lines of writing in the accompanying illustration will appear to have been penned by the same hand. The pen pressure is about the same and the dif-

fference in matters pertaining to the heart. That is, he may be polygamous at heart. But when he falls in love he gives himself over completely. In marriage he would probably continue to be faithful, loyal and loving for the very reason that he is so sentimental. This though he may frequently betray a roving eye.

Beginning strokes are not alto-

sample of my boy friend's
the first was also to you but

ferences are not clearly defined. They have to be looked for.

Tracing reveals greater spontaneity and force behind the pen of your boy friend. The letter forms in his script are irregular as to size, and in a characteristically small script this peculiarity automatically increases intensity all around, mentally, emotionally and physically. He is never indifferent. All undertakings are entered into wholeheartedly, almost passionately. And if not as thorough as you, he is quick to act and sincere.

Your own handwriting is steadier as to size, rhythm and spacing between letters. As these connective strokes are wider than the width of letters, I know you to be impatient for success. You are of a practical nature. And because you appreciate what money can buy, you are eager to amass the wherewithal.

The boy friend is more idealistic. He is more imbued with the spirit, the purpose or the idea itself, than reward for attaining the goal toward which he is working.

I believe if you can bring yourself to understand this difference in your make-ups, you will be less inclined to nag him on to what to you constitutes success. In a material sense, he is satisfied with considerably less than you. But sentimentally, romantically and spiritually he feels more keenly than you He suffers more in love, for this reason. Temperamentally he may be more

gether in harmony with small writing like your own, B. J. Undersized script in itself is a sign of highly developed mental powers. The extended initial strokes in your script show that old-fashioned notions still persist, and these doubtlessly have to do with morals and manners.

High flung "i" dots show you to be high minded. You are clear thinking too, and more definite in your tastes. You are industrious, know exactly what you want from life, and you believe hard work and sincerity will eventually bring you side by side with your goal. Consequently life is not so complex for you. You are not given to worry, nor do you experience the spiritual restlessness which is born of an urge to better one's self.

The boy friend is modest, unaggressive though eager to experience, learn and pass on to the next stage of growth. He makes very little fuss about it, but he is as true to his nature as you are to yours. He must like your stability, your sincerity. He must find you restful and steadfast. He will continue to find you satisfying until in efficient fashion you set to work making him over more in keeping with your own style. This will take considerable nagging and watching to be sure. By nature he is not the detailist you are. But even if you succeed, may I warn you that you will have killed his love?

Pellston Will Hold School in Churches, Gym, Lodge Rooms

Three hundred grade and high school pupils, deprived of school-rooms and facilities by fire will attend classes for the remainder of the year in the gymnasium, churches and local lodge rooms.

A new school building will not be completed this school year. It is the plan of school officials to arrange for erection of one new building to house all grades, including the high school, to be ready by fall.

There is a possibility several adjoin-

ing rural school districts may consolidate with the Pellston school.

Since fire destroyed the school at Van a year ago pupils from that place have been transported here and some Levering pupils in grades 11 and 12 have come here to high school.

Scotch Magic

Jock: "Man, that was a grand juggler."

Angus: "What! He was the worst I ever saw."

Jock: "Weel, maybe the body wasna sae clever, but I gave him a bad \$5 bill for a trick, and he gave me a gude one back."
