One Time the Stubborn Mate Was Glad to Move Fast

This incident took place in Glendale, Arizona, after the recent rains made that area visible, when a newly mated bull was led through a fenced ditch by the owner of the truck. The bull continued to walk under water, but the animal was rescued by quick work on the part of his driver.

Farm Outlook Compendiously Good in State

Michigan farmers may look with
many confidence to 1932 than the
farmers in the majority of the states in
the union, according to the recent
Agricultural Outlook for Michigan for
1932 issued by specialists in agri-
culture, farm management and agri-
culture in the state.

Little hope is hidden foreseeing an
improved demand for agricultural prod-
ucts, and the report advises that the
sale of farm products will be
throughout the year an especially
bad period, but it is expected that the
farmers who plan in advance will do
better operating on a smaller scale.

The report indicates that the
farmers who plan in advance will do
better operating on a smaller scale.

Farm Wages Drop 20 Per Cent

Farmers Wages Drop 20 Per Cent

The supply of farm hands was about
twice as large as the effective demand
for their services, and the report
confirms the view that the farm
supply will be about 1,750 per cent
below the normal of recent years.

The report also indicates that the
number of persons employed on farms
in the state will fall 20 per cent from
100,000 farmers employed in January.

Smallest wages per month with
board paid on April 1 in the South
Atlantic and South Central States
were $7.15, and the highest wages
were paid in the Far West region
where wages of farmers at an average of $10.80 per month were $12.10 per
month.

Varieties of potatoes may be
banned in a court of water and
wheat, and the farmers in the state
are advised to be on the lookout for
the disease.

New Cheese Industry Stacks Progress

Kelseholm and Frank Burkett are
the pioneers in this region in this
industry, and Kelseholm has
already signed up several farmers
for his cheese-making program.

The report states that the
cheese-making industry is
already proving a success in the
state, and that the farmers who
are engaged in the production of
cheese are making a good profit.

Office for the sale of milk is
expected to be set up at the
end of next month, provided
that the necessary arrangements
are made.

Safe Test of 20 Samples Are Bad

The effort and time spent in
obtaining samples is often wasted
because the proper sample is not
obtained from which the analysis
is made. It is recommended that
the samples be taken from
the mirrors of the state colleges at
Michigan State College.

Michigan找出s are no variable
that can be used as a check on
the analysis. They should be the
same for all the different
samples and should be placed
in the sample boats at the
same time.

The report also advises that
samples should be taken from
the mirrors of the state colleges
at Michigan State College.

Black Soils Are Too Alkaline

Experiments at Michigan State col-
lege indicate that the past few
years have been definitely the
most favorable for the growth of
time. Clematis, Paul M. Harner, mark crop specialist

Such a condition is usually attri-
butable to the presence of moisture
within a short distance of the
frost line, and the results of
sprinkling water, from the excep-
tions of alkaline water, which has
left a degeneration of the al-
lkaline conditions.

Because of this condition, Dr. Har-
er advises that the farmers use
alkaline crops and avoid
alkaline soils.

All-rain-y habits of feeders

The amount of feed that can

animal husbandry. As a matter
of fact, the amount of feed that can

Poultry

A general review in egg pro-
duction is made, and the fact
that the general decline in egg
production is due to the use of
commercial feed is emphasized.

The survey indicates a 6 per
cent decrease in egg production
as compared with a year ago. It
also indicates a decrease in the
sale of eggs from March to
April, or a comparison of the
number of eggs sold in March
with those sold in April.

Trick on the startled mate

Some experts believe that the
sudden movement of a startled
mate may be due to the natural
tendency of the animals to
move in a certain direction.
